

Team Elleci

*"Enthusiasm is one of the most powerful engines of success.
When you do a thing, do it with all your might.
Put your whole soul into it. Stamp it with your own personality.
Be active, be energetic, be enthusiastic and faithful, and you will accomplish your object.
Nothing great was ever achieved without enthusiasm".*

Ralph Waldo Emerson

Ralph Emerson thought perfectly combines in these few verses the philosophy of **Team Elleci**.

Giancarlo Traversa
The President

Tenacity, insight, innovative spirit put at the customer service in order to achieve his wellbeing. Since its establishment in 1992, Elleci has always been able to evolve by introducing new elements in the washing area. Elleci Group operates worldwide in more than 40 countries, with a production plant in Italy and **5 sales offices**:

- Elleci Italy
- Elleci North America
- Elleci Baltic
- Elleci Shanghai
- Elleci UK

Internationalization is a natural step that Elleci is making to promptly meet the requests of its customers, allowing them to understand and integrate more with their cultures.

The values of Elleci

Since its establishment, the Company is based on the:
"PENTAGON OF VALUE"

QUALITY

Elleci applies TQM system (**Total Quality Management**), the organizational model that *"is based on the involvement of the whole enterprise in achieving the goal."*

The entire organization is managed so that it excels in all those attributes of products and services important for the customer. One of the main targets of the company vision are the employees. Management has always aimed to tran-

sfer their vision, trying to share and accept the values that require vision and consequently, each member of the team identifies and appreciates its role in the company.

In this way, over the years everyone has been able to improve their skills, has been enticed to take responsibility and participate in the creation of company emotional intelligence.

Sustainability

Every day we are called to make choices that follow a logic. Why do not bear in mind the logic of sustainability?

Green Sink: in respect of the people and the planet that is hosting us!

Sustainability, for Elleci, is to keep everything into consideration, each actor acting in it. Respect for the environment and the person for Sustainable Development, this is our basic principle. The business value is assessed in accordance with the commitments that the company takes on social responsibility and environmental sustainability.

Supply raw materials: the search for materials with lower environmental impact.

Selection of suppliers: before choosing a careful analysis is carried out to assess the level of respect for the environment that the supplier shall carry out in all its manufacturing process.

Energy saving: use in the production processes of energy-saving sources. Maximizing the use of natural light and lighting throughout the factory. It minimizes the consumption of artificial light. Using clean energy sources aimed at sustainable production processes.

Separate collection of rubbish: waste disposal in accordance with the rules in force. Registration for SISTRI, Control System of Traceability of the Wastes, the system established by the Ministry of Environment. Registration of CONAI, National Consortium for the recovery of packaging.

Waste reduction: maximization of production efficiency through specific installation systems and control systems based on Total Quality Management, based on the cardinal principle: *the non-quality results represent higher costs for the company.*

Transport: daily study carried out to optimize handling.

Sensitization of Team Elleci: involving the entire company to achieve the targets, one of which is sustainability.

Certifications

Quality is evident when, returning are the customers not the product.

Jonathan Swift

In order to offer products of high technical quality, the ELLECI has a specialized internal R&D division and engineering of production facilities: the **G&G Engineering**.

The team of engineers, chemists, researchers and designers analyses and designs every single stage of production until the finished product.

ISO 14001

Certification of environmental management system. It shows that the company operates in the territory in a compatible, environmentally friendly and supportive legislation.

This certificate helps to improve the relationship with our planet, as well as reduce costs through reduced rejected sinks and waste.

ISO 9001/Vision 2008

This certification does not directly concern the product, but rather the way in which it is manufactured, sold, mounted, replaced in the event of defects.

The ISO 9001 standards establish a set of rules to be followed in order to rationalize the work, to meet the needs of the customer, maintain and improve its quality.

G.P.S. System: the technological leadership of Elleci

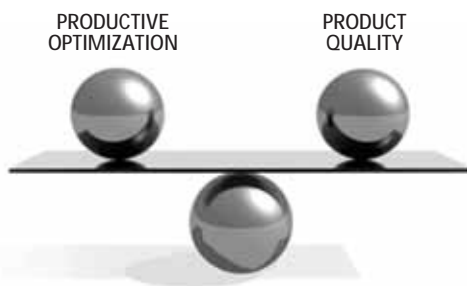

In order to transform technology into a secret weapon, we have to be able to conceive new company models.

Peter Drucker

G.P.S. System represents today the best moulding technology expression of composite materials thermosetting in the field of kitchen sinks.

On the scale of Quality many times you try to chase false illusions, to reduce the so-called manufacturing inefficiencies. However, the result is often a small improvement at the expense of a drastic reduction of the quality and technical-functional features of the product.

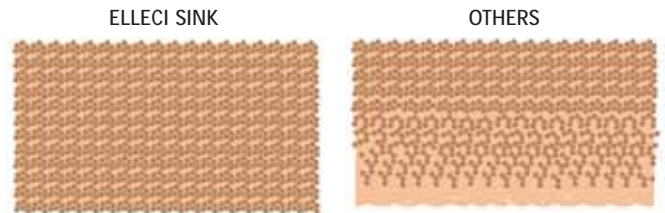

Cycle time

Chemical and physical tests, for example, show that the reduction of cycle time in the manufacturing process makes the product fragile, and weakens the chemical bonds of its components. Elleci now applies in all its manufacturing processes a correct balance between productive optimization and undisputed quality of the product. Durable sinks!

Concentration of particles in the mass of the sink.

An even concentration of the mass both on the back side and front side of the sink.

Produced with the technological system of Elleci, GPS System, a sink in Granitex, Metaltek, Vitrotek 3G is characterized by an evenly distribution of components throughout the mass of the sink.

Plus the GPS system:

- Improved impact resistance (+30%).
- Improved thermal shock resistance (+100%). In addition 7000 cycles of hot water (above 90° C) and cold water (15° C), 20 years of daily use.
- Better resistance to high temperatures (+30%).
- Improved appearance of the sink.

Thanks to the high level technology and quality our sinks are guaranteed **10 YEARS**.

Product Certification

Product certification, complementary to that of the quality system, designed to meet the needs of the final customer, who through a clearly visible label can evaluate the product compliances with current regulations.

Elleci products are certified by the most prestigious and rigorous international institutions, including the **NSF / ANSI** (National Sanitation Foundation / American National Standards Institute), **IAPMO** (Standard Product Development) and **ITS** (Intertek Testing Service) that verify the implementation of stricter technical requirements for the marketing of products in the U.S. market.

These brands are recognized worldwide for its high product quality standards approved by its increasing customer confidence in purchasing the product. All Elleci products are, of course, **CE** marked, and declared in conformity with European standards on product safety.

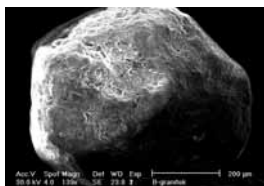

Granitek

Creativity is to combine existing elements with new and useful connections.

Jules Henri Poincaré

Granitek is given by the union of natural granite and acrylic resin and, of granite has the best quality: high resistance to high temperatures, to impacts and to the most violent shocks.

The selection of colored granite and the variation of the combination of its shades determine the color of the finished product.

Ceramization: it is a specific colouring process of the granite particle. The painting is not only on the surface but in the entire mass of the particle through a firing process at very high temperatures.

ELLECI CERAMIZED PARTICLE

NOT CERAMIZED PARTICLE

The result is a significant improvement in resistance to the discoloration. Aesthetics as a natural stone.

ANTIBACTERIAL PROTECTION

The material Granitek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. The mass is in fact enriched with **silver ions** that inhibit the establishment and growth of bacteria.

Metaltek

Nothing great has been done to the world without the contribution of passion.

George Hegel

It attracts the eye, inviting to the touch. Aesthetical impact, adaptability to steel, functionality and practicality of Granitek.

The chemical composition is made up of natural granite, acrylic resin and, like all the sinks manufactured with the technological leadership G.P.S. System, has an even mass resulting in high resistance to scratches, stains, impact and temperature changes. The uniqueness of this product is that have been added metal particles, making the product with a brilliant and shining finish.

The target is to obtain special "metallic effects" which stand out in 5 finishes: 67 cromo, 70 ghisa, 71 alluminio, 72 rame and 73 titanium.

The different finishes allow a perfect match between the sink and the other stainless steel components in the kitchen.

ANTIBACTERIAL PROTECTION

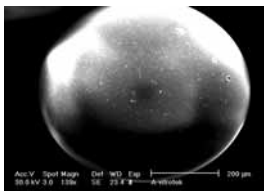

The material Metaltek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. The mass is in fact enriched with **silver ions** that inhibit the establishment and growth of bacteria.

Vitrotek 3G

Innovation, change, replacement, provocation is the only way to avoid being subjected to the transformations of others. You will be less dependent on future if you will have the present in your hand.

Seneca

VITROTEK 3G MICROSPHERIC:
100%
MICROSPHERES OF PURE GLASS.

2003: The continuing research for new materials, which has always characterized Elleci, reaches a new milestone: **Vitrotek**. An exclusive and unique material made of resin and pure glass particles. As you know, the **glass** has specific qualities that make it an ideal element for many uses, especially in the kitchen environment. Equally hygienic are its properties, larger particles and traditional resin. It is completely anallergic and antibacterial, resistant, hygienic, antistatic and stable in colour.

2003 VITROTEK 1st GENERATION

2005: Elleci presents a **Vitrotek** formulation with a smoother surface and a "silky effect". Reduced section of the sphere for a silky effect but still relatively rough.

2005 VITROTEK 2nd GENERATION

2011: Elleci presents **Vitrotek 3G Microspheric** characterized by the use of micronized and micro-section spheres with the application of "special resin". The result is a completely smooth surface of the sink.

2011 VITROTEK 3rd GENERATION

Antibacterial: Ultra-smooth surface. Non-porous, hydrophobic and lipophobic. Impossible the establishment of bacteria.

Water drop traditional material

Water drop Vitrotek 3G Microspheric

Oil drop traditional material

Oil drop Vitrotek 3G Microspheric

Total Antibacterial Protection 100%

Vitrotek 3G material has a total antibacterial protection, compact and durable.

The nature of the glass

According to its composition and its thermal history, the glass is hard at room temperature (it has hardness 7.5 on the Mohs scale), it is non-porous, with a strong characteristic of shining, it refracts light rays in a remarkable way. Glass is the most suitable material for manufacturing of objects destined to food industry. It is certainly a material hygienic: non-toxic and is very resistant to time degradation.

Among the many qualities of glass there is also the total absence of toxicity.

Improved hardness of the surface maintained unchanged: initial unchanged qualities thanks to the extremely compact surface.

The materials used by Elleci are positioned only a few points lower in the Mohs Scale, compared to some natural elements as diamond hard par excellence.

MOHS SCALE:

Source: PAL.MER. Science and Technology Park

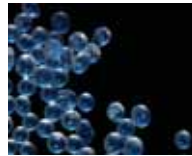

10 DIAMOND

9 CORUNDUM

7.5 GLASS

7 QUARTZ

Compact: surface density optimized thanks to the microspheric section of glass.

Easy to clean: doubled flow on the surface of liquids compared to the traditional materials. ½ water absorption: using glass microspheres and "special resin" of hydrophobic monomer (it does not absorb water) the water absorption is improved: 40% less than the best materials present on the market today. Consequently, is further enhanced the resistance to bleaching.

FUNCTIONALITY

SIREX is the new line of composite sinks featured by a flat aesthetic which incorporates two new patents of Elleci. For the first time, there is the installation of the **innovative compact draining system (S.I.R.)**.

It surpasses the last limit of the composite material: the resistance to high temperatures. All models of Sirex Line, in fact, see the application of an **Heat Stop Board** which has the function to disperse the heat. Another innovation is the **size**. Sirex line has a width of **51.5 cm**, a centimeter and a half more than standard one but it exploits the same standard sinks built-in hole (48 cm).

Innovative and patented **compact space saving draining system** that optimizes the space under the sink, due to the limited size of 5 cm. Better exploitation and optimization of space under the sink.

Increased usable space inside the bowl because the grid, replacing the traditional waste, is laterally placed. Greater water down flow (60 litres/minute). **No hole for the overflow**: more beauty with the same safety and functionality.

Installation and cleaning of the **S.I.R.** easier because it consists of few elements.

ELECTRONIC OR MECHANICALFUNCTIONING

Electronic: opening/closing activated by a button placed on the control panel. Equipped by a lithium backup battery, long lasting for a complete autonomy in case of absence of electricity.

Activating of mechanical system: pop-up lifting system with direct action and not rotating, much more efficient, practical and durable.

QUICK AND EASY INSTALLATION

Sirex Sink is supplied with pre-mounted hooks and draining system (S.I.R.) already installed. As a result, time saving and easier work for the installer.

HEAT STOP BOARD (H.S.B.): ELLECI PATENT

Up to date, the last limit of the composite sink has been the limited resistance to high temperatures. The resistance limit tends to remain at maximum at about 250° C.

However this limit is fairly restrictive, considering that a lot of pots and pans, coffee pots, teapots, etc. may exceed it, hence the need to develop a system that does not limit such use.

The **H.S.B.** is based on a AISI 316 stainless steel plate application of a thickness of about 5 mm inserted into a slot placed on the sink drainer center, so that to make its use more practical furthermore to enable the steel plate to **disperse the accumulated heat** due to any contact with very hot objects,

there are 4 spacer pins which create an gap between the steel plate and the composite material of the drainer surface.

In this way, the accumulated heat from the plate is easily dissipated into the air without altering the surface of the sink.

The spacers facilitate the placement of the plate on the sink keeping it blocked into its position.

In order to clean it, the removal is extremely simple and fast. Thanks to this innovation, the composite sink surpasses its last limit, while improving its visual impact due to the combination of two different materials.

VITROTEK 3G MICROSPHERIC

The new **Sirex line** is available in the new formulation of our innovative Vitrotek 3G material, which is entering in its third generation: hard, compact, antibacterial and easy to clean.

HARD: initial unchanged qualities thanks to a very compact surface.

COMPACT: optimized surface density thanks to the section of the glass microspheres.

ANTIBACTERIAL: ultra-smooth surface, non-porous, hydrophobic and lipophobic. Impossible the establishment of bacteria.

EASY TO CLEAN: doubled flow of liquid on the surface compared to traditional materials.

VITROTEK 3G MICROSPHERIC

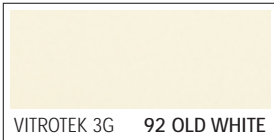

Vitrotek 100% pure glass microspheres.

Characterized by the use of micronized and micro-section spheres and a "special resin" The result is a completely smooth sink surface but still opaque. **Antibacterial:** ultra-smooth surface. Non porous, hydrophobic and lipofophobic. Impossible the establishment of bacteria. For the first time we get a 100% antibacterial sink. **Total Antibacterial Protection.**

METALTEK
Metallic effect.

It catches the eye, inviting to the touch. Aesthetical impact, adaptability to steel, functionality and practicality of Granitek. The uniqueness of this product is that the metal particles have been added and make it a product with a brilliant and shining finish. The Metaltek material has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

METALTEK 67 CROMO

METALTEK 73 TITANIUM

GRANITEK
Effect of natural stone.

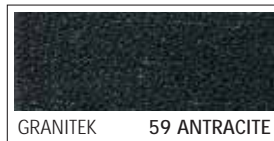

Granitek is given by the union of natural granite and acrylic resin and has the best quality: high resistance to high temperatures, to impacts and the most violent shocks. The material Granitek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

Ego: design centred on movement.

A movement begins in the first bowl, flows past the sink centre with a curvature similar to a propeller and gliding into the drainer.

Ego: design for a kitchen to live.

The washing area is characterized by a new look.

Baskets, multifunctional bowls and chopping board which make the work in the kitchen easier.

VITROTEK 3G MICROSPHERIC

Vitrotek 100% pure glass microspheres.

Characterized by the use of micronized and micro-section spheres and a "special resin". The result is a completely smooth sink surface but still opaque. **Antibacterial:** ultra-smooth surface. Non porous, hydrophobic and lipophobic. Impossible the establishment of bacteria. For the first time we get a 100% antibacterial sink. **Total Antibacterial Protection.**

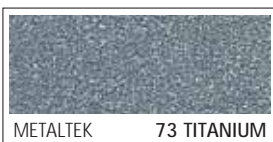

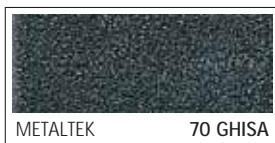

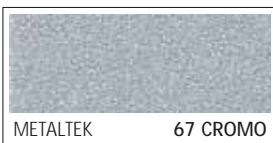

* until stock lasts

METALTEK Metallic effect.

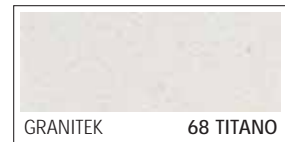

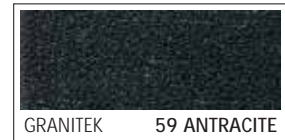

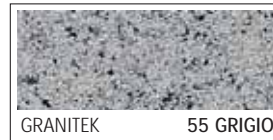

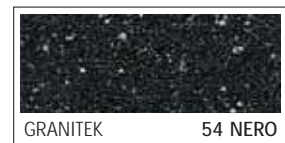

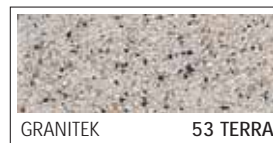

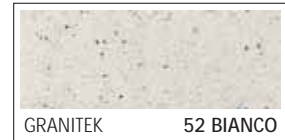

It catches the eye, inviting to the touch. Aesthetical impact, adaptability to steel, functionality and practicality of Granitek. The uniqueness of this product is that the metal particles have been added and make it a product with a brilliant and shining finish. The Metaltek material has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

GRANITEK Effect of natural stone.

Granitek is given by the union of natural granite and acrylic resin and has the best quality: high resistance to high temperatures, to impacts and the most violent shocks. The material Granitek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

Elleci BEAUTY SPA for the care of our sinks...

Specific products for caring and cleaning of Vitrotek 3G, Metaltek and Granitek materials. see page 222

VITROTEK 3G MICROSPHERIC

Vitrotek 100% pure glass microspheres.

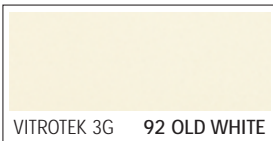

Characterized by the use of micronized and micro-section spheres and a "special resin" The result is a completely smooth sink surface but still opaque. **Antibacterial:** ultra-smooth surface. Non porous, hydrophobic and lipofophobic. Impossible the establishment of bacteria. For the first time we get a 100% antibacterial sink. **Total Antibacterial Protection.**

METALTEK
Metallic effect.

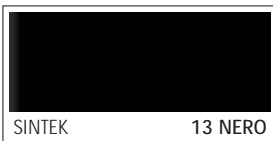

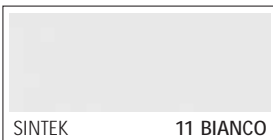

It catches the eye, inviting to the touch. Aesthetical impact, adaptability to steel, functionality and practicality of Granitek. The uniqueness of this product is that the metal particles have been added and make it a product with a brilliant and shining finish. The Metaltek material has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

SINTEK
A composite mixture realized from acrylic resin and silanized quartz.

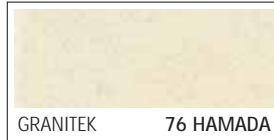

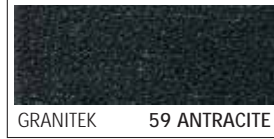

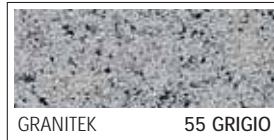

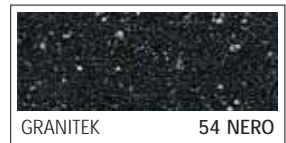

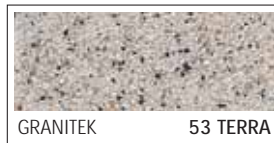

The silane is a binder between resin and quartz in order to guarantee a stronger adhesion of these two components.

GRANITEK
Effect of natural stone.

Granitek is given by the union of natural granite and acrylic resin and has the best quality: high resistance to high temperatures, to impacts and the most violent shocks. The material Granitek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

METALTEK
Metallic effect.

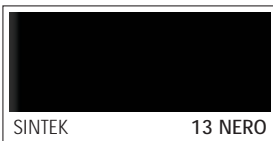

It catches the eye, inviting to the touch. Aesthetical impact, adaptability to steel, functionality and practicality of Granitek. The uniqueness of this product is that the metal particles have been added and make it a product with a brilliant and shining finish. The Metaltek material has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

SINTEK
A composite mixture realized from acrylic resin and silanized quartz.

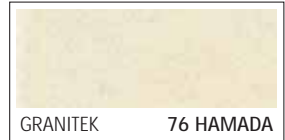

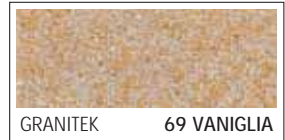

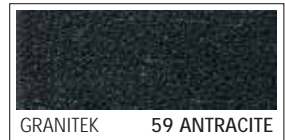

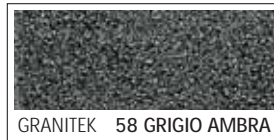

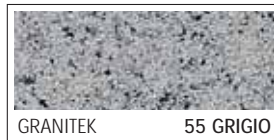

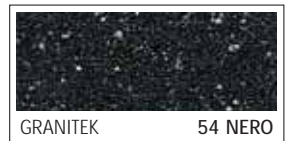

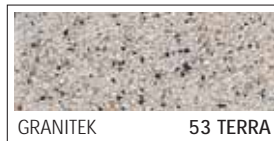

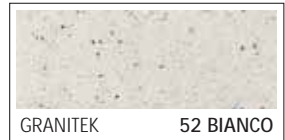

The silane is a binder between resin and quartz in order to guarantee a stronger adhesion of these two components.

GRANITEK
Effect of natural stone.

Granitek is given by the union of natural granite and acrylic resin and has the best quality: high resistance to high temperatures, to impacts and the most violent shocks. The material Granitek has an **antibacterial protection**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled.

Production of "authentic" steel articles

Our sinks are made of genuine stainless steel, precisely the family of steel defined as AISI 304 (EN 1.4301). Our stainless steel sinks are always shiny, they do not rust or fade. Their finish keeps the lustre of the first day for a long time when other materials are already aged.

The choice of 304 is motivated by the excellent mechanical features and resistance to corrosion, Elleci did not take into account cheaper steels such as those of 200 series because the latter, having a lower content of nickel (which has the great advantage of increasing the speed of re-passivation) they contain inside significant amounts of manganese (Mn), which has a strong affinity with sulphur to form manganese sulphides which are areas of preferential corrosion initiation.

Instructions for the maintenance of steel sinks

For everyday cleaning do use regular detergent suitable for stainless steel receptacles. Rinse with warm water and dry with a soft, dry cloth. Do not use pan scourers or abrasive sponges. Do not use neither chemical detergent for silver nor bleach or other disinfectants containing chlorine or its derivatives. To keep your sink shiny as new, Elleci recommends the "Active Inox" special product for the thorough cleaning of stainless steel sinks effective for removing stains.

ACTIVE INOX

code: DLI01600

Elleci Beauty for stainless steel, 1 bottle of 500 ml.

For thorough cleaning of stainless steel components of our sinks.

Effective stain removal.

How to use for stubborn stains: pour the detergent on the affected area, leave for 1-2 minutes and remove with gentle pressure. Shake well before using.

Shake well before using.

Why to buy an Elleci mixer?

6 qualities that make the difference.

01

Certificated Raw Materials.

Brass, Chrome, Cartridges and Varnishing.

02

The Brass:

the used one is OT58, this means that 58% of it is made up of copper, 41.5% of zinc and the remaining 0.5% of other metals, such as lead. Other manufacturers use OT54 or OT52 this means that there is less copper, substituted by other metals more harmful for the health.

03

Metals Clearing:

- the exceeding quality of lead is removed, because lead is carcinogenic;
- means of electroplating, Nickel is added with a thickness of 18-24 micron and Chrome 0.1-0.3 micron. These thicknesses guarantee a high endurance of the mixer.

04

Cartridges:

With disks made up of high quality ceramics that offers a long lasting duration.

05

Varnishing:

Before beginning to use Epoxy varnish, it is tested and has to be correlated by technical sheets in which chemical composition, product features, method of use and storage can be found. The varnishing phase lasts 48 hours, included the time needed to dry the product, and ends up with the "scratch" test, by means of a specified machinery. The test has a positive result if no leaf-stripping of the varnish is present. Some samples are selected to undergo the saline fog test as for the regulation uni En 248 (corrosion test).

06

100% Made In Italy:

Italian quality and design are one of the main strength points of Elleci. Result of commitment and passion, the continuous research of an original design is aimed to manufacture durable, but also, beautiful and elegant products.

Innovation and trend: Elleci mixers constantly meet the market requirements, particularly referred to the Kitchen field and therefore, they are in line with Elleci sinks style.

Marna

Single lever mixer that completely disappears under the working surface

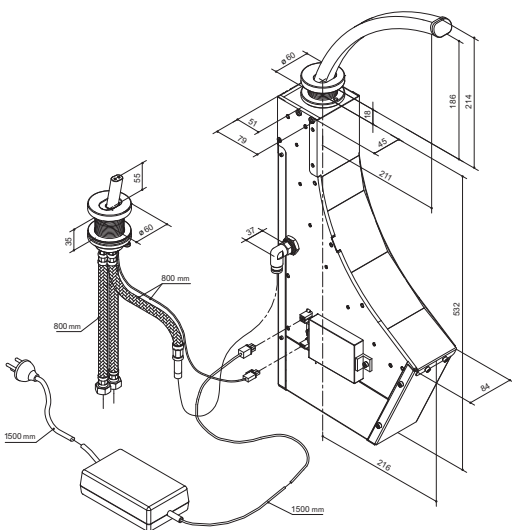

Completely disappearing mixer beneath the work surface. The minimalist Marna mixer disappears completely beneath your work surface, leaving only a discreet joystick that will allow you to use the mixer. Once the spout is completely out and working you will have a delicate and velvet-like flush of water without any sprinkling. It is perfect in every kitchen.

Ovens Line

- 176 Modern Oven
- 178 New Modern Oven
- 180 Classic Oven
- 182 Country Oven

General features

It is with renewed enthusiasm that Elleci presents the features of new ovens, developed both in performance, using the latest technological innovations, both in the latest aesthetic lines, in order to fit with taste and elegance in your kitchen.

100% Made in Italy Products

Manufactured entirely in Italy. Along with the words "Pizza" and "Pasta", the term "Made in Italy" is the most famous in the world. Made in Italy is an ancient prestige. It is based on creativity and inventiveness which marries quality. "Made in Italy" from fashion to footwear, from furniture to inventions and scientific discoveries, which has always distinguished us worldwide.

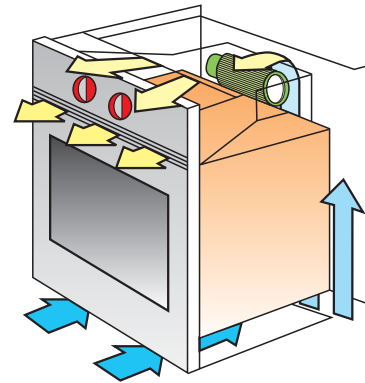

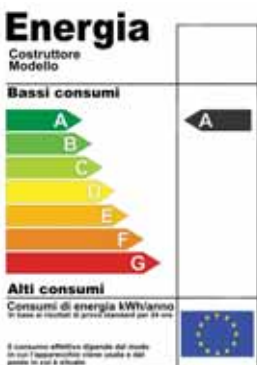

Elleci Suite

Ovens can be combined with modern, classic and contemporary design of our sinks reaching a harmonious match, simple and refined. Elleci Suite: sink, mixer, oven, hob and hood create a unique "colour family" giving harmony and coordination in the kitchen.

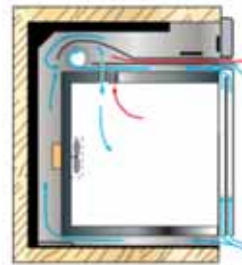

Class A

Efficient, careful to ecology and saving. The energy label allows the consumers to have a standard method of comparing the energy consumption of household appliances. All Elleci ovens boast energetic **class A** which guarantees efficiency and energy saving, while maintaining the highest performance in operation.

Tangential Ventilation Cooling fan

A forced system of air circulation contributes to reduce the temperature of heat transfer in both the front and side of the oven. The tangential ventilation is determined by the operation of a fan which is activated automatically at the oven ignition. The fan generates an air flow escaping from the frontal grid, creating a barrier against heat deriving from the oven and cooling at the same time

the door handle and oven control panel. Air circulation also creates a better heat insulation of electronic components and internal mechanisms to ensure superior reliability and durability. In this way condensation is prevented, leaving the glass door always clear for a perfect view of the interior. The fact that the fan

is running even after the oven was turned off, is a safety feature, as it indicates to the user that there is still residual heat in the oven and thus, it is necessary to pay attention.

Safe door

Hypothermic heat reflective glasses, detain the heat produced by the oven, reducing the transmission to the external surface of the door. It therefore reduces the dispersion of heat and power consumption.

INNER LIGHT

Oven light (remains on during the operation).

PASTRY

LOWER RESISTANCE: the resistance placed on the sole is in function. Thermostat adjustment from 50 °C to MAX.

TRADITIONAL COOKING

LOWER AND UPPER RESISTANCE: in function the bottom and the upper element. Thermostat adjustment from 50 °C to MAX.

COOK ON MULTIPLE LEVELS

CIRCULAR RESISTANCE WITH FAN: thermostat adjustment from 50 °C to MAX. Hot air is uniformly distributed on the various shelves.

GRATIN

DOUBLE UPPER RESISTANCE WITH FAN: (large area fanned grill) thermostat adjustment from 50 °C to MAX.

GRILLED

DOUBLE SUPERIOR RESISTANCE: (large area grill) thermostat adjustment from 50° to 200° C.

BROWNING AND SMALL GRILL

UPPER RESISTANCE: (power grill reduced) thermostat adjustment from 50 °C to 200 °C.

INTENSIVE COOKING

UPPER/LOWER RESISTANCE WITH FAN: thermostat adjustment from 50°C to MAX.

PIZZA AND BREAD

LOWER RESISTANCE + CIRCULAR RESISTANCE WITH FAN: Thermostat adjustment from 50°C to MAX.

General features

The new Elleci cooking tops range sums up technological innovation and aesthetic creation, they smartly fit any kind of kitchen furniture and they are the result of the Mediterranean culinary tradition. Their design aims to satisfy the most demanding expectations of those who use them every day.

100% Made in Italy Products

Manufactured entirely in Italy. Along with the words "Pizza" and "Pasta", the word "Made in Italy" is the most famous in the world. Made in Italy is an ancient prestige. It is based on creativity and inventiveness which marries quality. "Made in Italy" from fashion to footwear, from furniture to inventions and scientific discoveries, which has always distinguished us in the world.

Safety valve

Gas Protèkt: it stops the gas supply in accidental case of switching off.

One hand ignition

It is sufficient to press and, at the same time, rotate the knob until both gas supply and sparks, necessary to ignite the burner, are activated.

Burners

Triple Crown (nr. 3 powerful fire circles) is able to develop and evenly distribute heat, reducing the cooking time. A better allocation under the pan exploits to the utmost power and allows an even and quick cooking.

Cast iron pan supports

The pan support plays an essential part. Sturdy, heavy, stable, beautiful and perfectly functional, they are able to transfer a suspension feeling while maintaining utmost stability to every kind of pan. The lack of sharp corners makes easier the cleaning.

Elleci Suite

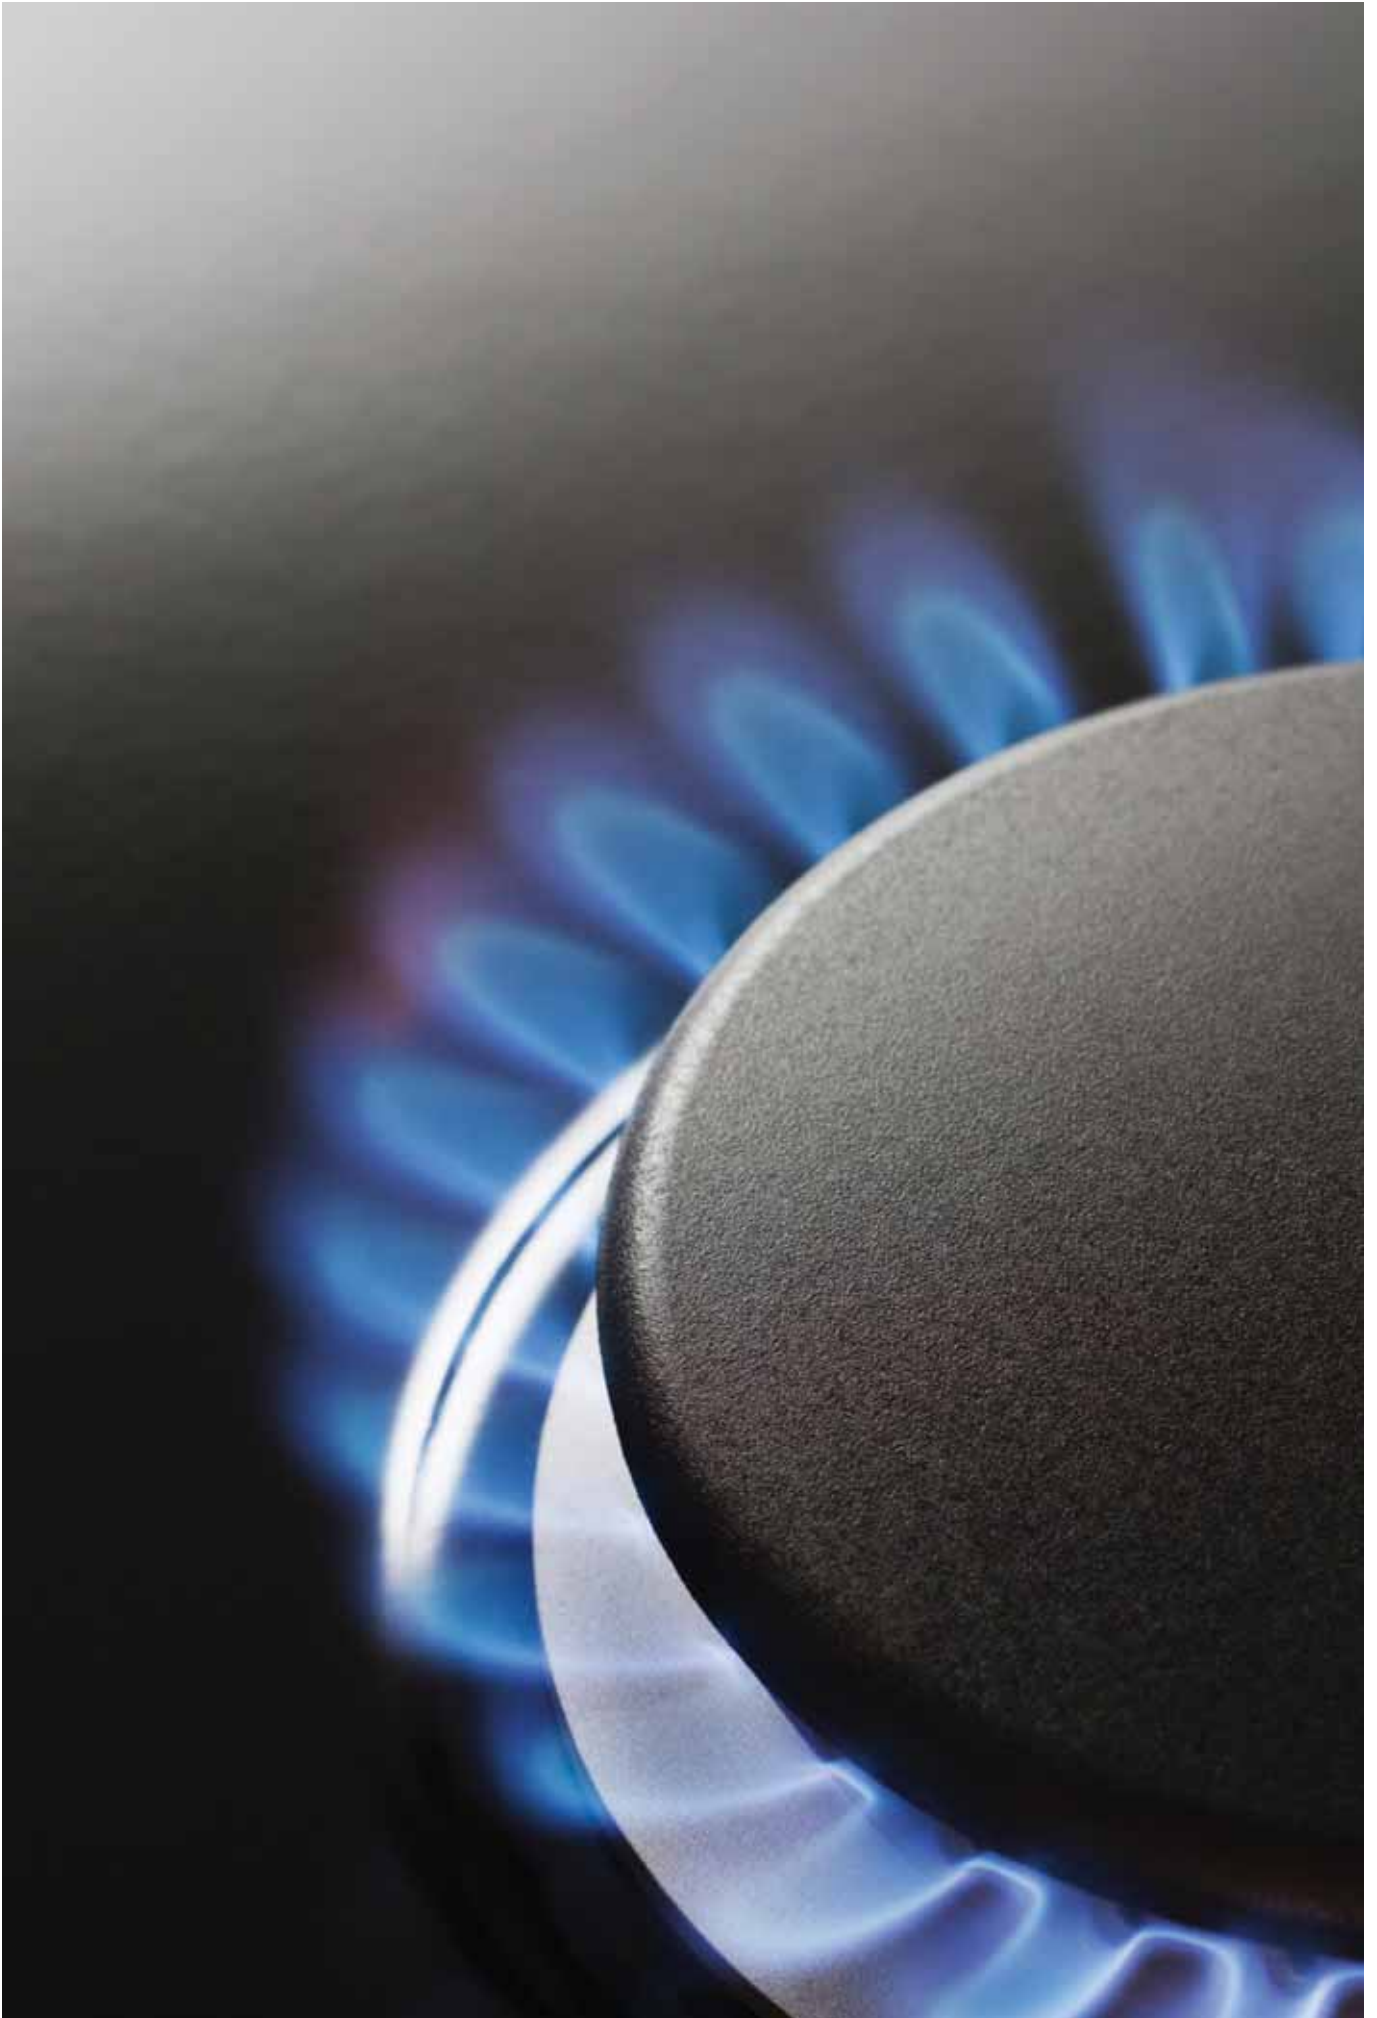

Cooking tops perfectly fit modern, classic and contemporary design of our sinks, achieving a harmonious, simple and elegant match. Elleci Suite: sink, mixer, oven, cooking top and hood create an unique "colour family" giving harmony and order in the kitchen.

Crystal cooking top

The new Crystal cooking top is made up of high resistance tempered glass in Avena finish, perfectly matching our Sinks. The new "SLOPING" pan support has an unique design: featured from an sloping effect but from a total flat support.

Hoods Line

208 Plana Hood

210 Crystal Hood

212 Curve Hood

How to choose a hood

Before any other choice, it is important to identify the aesthetic model of hood which best suits the furnishing of your kitchen and still reflects his own taste. Elleci offers a full range of hoods both functional and from an original design, in order to allow a good match with our sinks, mixers, cooking tops and ovens: Elleci SUITE.

100% Made in Italy Products

Manufactured entirely in Italy. Along with the words "Pizza" and "Pasta", the word "Made in Italy" is the most famous in the world. Made in Italy is an ancient prestige. It is based on creativity and inventiveness which marries quality. "Made in Italy" from fashion to footwear, from furniture to inventions and scientific discoveries, which has always distinguished us in the world.

Hoods

All models of Elleci can operate in "exhausting" way, in which the air is sucked and expelled outside. The hood is equipped by a special valve that allows the expulsion of fumes, avoiding that cold air from outside enters home. In case there is no possibility of expelling the air outside the home, it is necessary that the hood is equipped with carbon filters (therefore operating in "filtering" way) through which the air is purified and re-entered the environment. This configuration requires a careful maintenance of carbon filters.

The pipes must have an adequate diameter (at least 120 mm) and, in case of external connection, it has not to be long and winding, because the performance of the hood could suffer in operating.

Grease filter

Grease filter is always needed and it has a double function. It protects the internal parts, avoiding that the greases exhausted from the hood damage the electrical components, particularly the engine.

Carbon filters

Carbon filters have to be applied when the hood is installed in filtering version and their function is to purify the air. This operation is allowed thanks to the great capacity of this vegetable substance, the active carbon, to retain particles and substances, before re - entering the air in to the environment. The carbon filters are not washable or renewable and they have to be replaced regularly. The carbon saturation depends on the use of the appliance, the type of cooking and the regularity of grease filters cleaning.

ACOUSTIC IMPACT
THE ADVANCED ENGINE TECHNOLOGY
ALLOWS TO INCREASE COMFORT EVEN
IN CASE OF HIGH EXHAUSTING SPEED.

LIGHTING
ALL THE ELLECI HOODS ARE EQUIPPED WITH
HALOGEN LIGHT BULB WITH A LOWER
CONSUMPTION, IMPROVE THE VISIBILITY
COMBINING IT WITH ENERGY SAVING.

TIMER
IT OFFERS A CHOICE BETWEEN 3 OPTIONS:
10, 15, 20 MINUTES FOR THE DELAYED
SWITCHING OFF OBTAINING THE PERFECT
ASPIRATION AFTER ANY COOKING.

Every hood is equipped with Timer, intensive speed, filter saturation signal and **"Clean Air"** function which ensures a continuous air change in complete absence of noise.

Complements

For a kitchen furnished with style, ELLECI suggests cutlery trays, draining racks, ladle bars and different accessories. Aesthetical criteria are the same: ergonomic and practical in order to satisfy all kitchen comfort and functionality. An added resource in order to have everything handy, at the same time, to furnish your kitchen with stainless steel accessories that enhance the elegance of any style.

Food waste disposers

Garbage in the waste-bin is often a cause of dirtiness and bad smells, it also lures pesky insects. The use of the disposer allows you to eliminate this inconvenience.

AN HELP IN THE KITCHEN

It is easily installed under the sink and allows you to get rid of the household foodstuff waste directly through the drain pipe in an easy, safe and practical way. A precious aid in the kitchen.

SAFE AND NOISELESS

There are neither rotating blades nor knives inside: the food waste is chopped up through a fixed ring gear without any danger for the user. The asynchronous motor and the construction materials made the disposer particularly noiseless.

EASY TO INSTALL

Thanks to an exclusive installing method, it takes just few quick operations.
