KESSEL-retail partners – products available immediately

Our retail partners sell and look after the most important KESSEL products.

Qualified specialists for sanitary installations or construction materials will be happy to provide their expert support and are sure to find a suitable drainage solution for you. In addition, well organised product presentations in retailers' showrooms provide detailed information about the different areas of application for drainage products.

To find a sales partner near you, visit the KESSEL website: www.kessel.com/contact

Drainage re-defined

KESSEL provides innovative problem solutions for the drainage of lands and buildings, from the initial idea to the product through to global sales — one-stop shopping for top quality that impresses retailers, planners and fitters alike. Behind the Lenting think tank there are more than 450 employees representing the KESSEL brand and filling it with life.

Breakthrough milestones of the drainage industry

1972

Where it all began the original clean-out was the basis for the **Staufix** backwater valve product line

1981

Entrance into the pump technology branch:

UNIVA-Pumpfix the first fully automated basement drain

1986

Launch into the
Environmental Protection
segment with the
UNIVA Grease and
Starch separators

1994

Market introduction of the new Komfort line of modular polyethylene inspection chambers

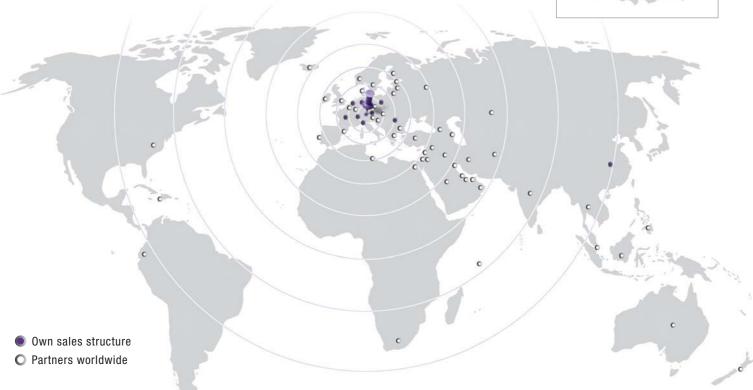

KESSEL – Worldwide sales and distribution

Your partner on 5 Continents

Multiple sales office throughout Europe as well as fully established distribution networks on five continents insure the availability of KESSEL products.

The KESSEL headquarter is situated in Lenting, Bavaria, Germany.

2007

Ecoguss -

the new composite material - the best alternative to cast iron

2011

World premiere of the Ecolift- the alternative to a standard lifting station with gravity sloped drainage

2013

Presentation of the new **Scada** wall drain, unique with LED lighting

2014

New grease separator *EasyClean* with functional design

2015

Ecolift XL hybrid lifting stations for industrial applications

KESSEL-Individual Solutions

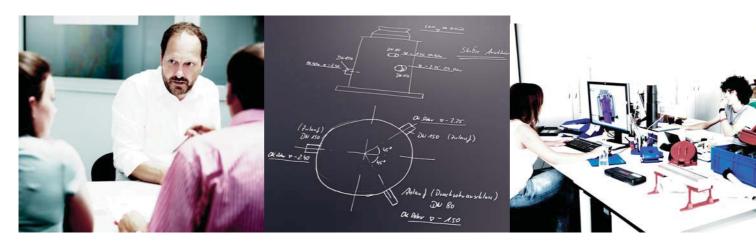

We make everything possible

Today's building industry often demands customized solutions which are not available on an everyday basis.

Our team of professionally trained designers are experienced in specifying and designing custom drainage systems and work hand-in-hand with our own production team in manufacturing these systems. With decades of in-house experience and successful project work we have positioned ourselves as the leading manufacturer in this field.

From the inquiry ...

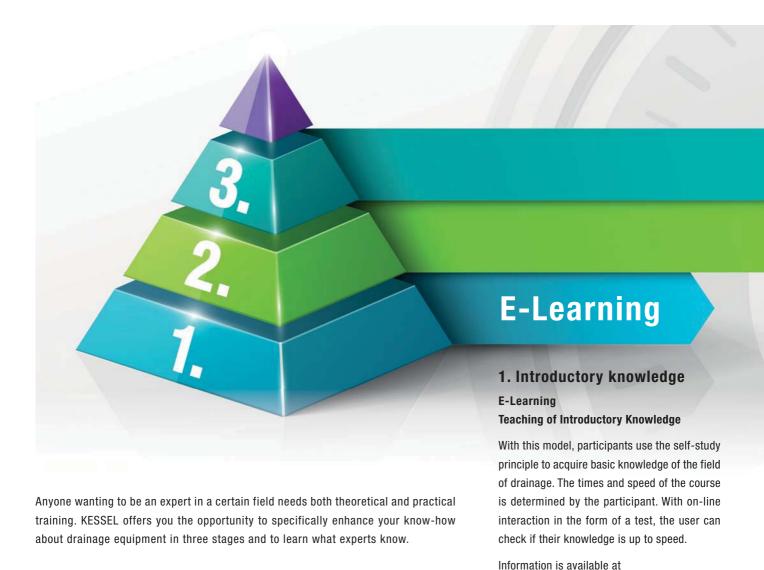

... to delivery

KESSEL-Education and professional development with the 3 level model

KESSEL-Customer Forum:World of drainage technology

Would you like to know where KESSEL products are installed and which drainage solutions we can offer you? In the world of drainage technology we present products in typical installation situations with multimedia support.

On-site Training

Webinar

2. Advanced

Webinar

Technical Training for advanced participants

This model includes on-line seminars concerning current topics in the field of drainage. Twelve times per year you will have the opportunity to view live internet presentations and to participate in a live 'chat' with a KESSEL instructor in order to have any questions you have answered.

Dates and Webinar topics are available at www.kessel.com/education

3. Experts

On-site Seminar

Expert Training and Workshops

Take advantage of our experienced instructors, the newest seminar topics and hands-on practical training. These seminars combine theoretical and practical experience to give the participants the highest level of knowledge and training. They can take place at our training centre in Lenting, Germany or on your own premises.

"KESSEL INSIDE" newsletter

Would you like to be kept up to date on the new developments and trends in the drainage industry? Then the KESSEL-Newsletter is perfect for you. We will keep you regularly up to date about new products and services.

Register in the ,Service & Download' section on the www.kessel.com internet site!

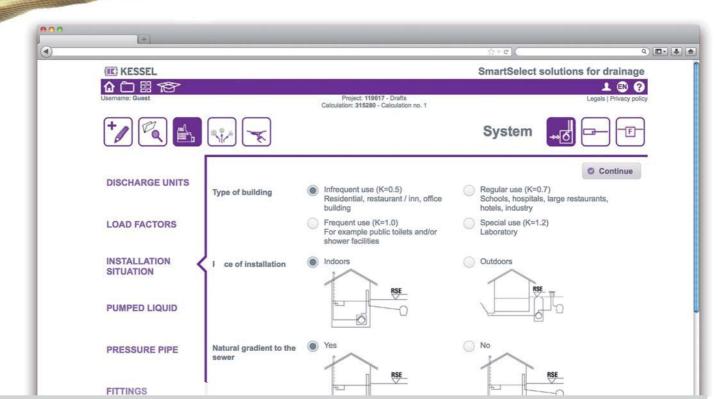

SmartSelect – simply makes planning faster

KESSEL SMART SELECT SmartSelect is an efficient tool for configuring, designing and calculating drainage solutions. It significantly reduces planning effort.

SmartSelect provides registered users with a project management program which can be used to request and edit saved projects. Registration at **smartselect.kessel.com** is free and takes only a few minutes!

- Lifting station selection program
- Grease separator selection program
- Floor drain water proofing selection program

With our new spare parts catalogue we want to provide even better support for craftsmen carrying out repairs or conversion work. Ordering spare parts will be even easier for trade partners too. To make it easier to find the right spare part, every product is listed with its most important distinguishing features and a 3D illustration. The individual components are specified with the exact designation and part number.

Now, the product search at **www.kessel.com** not only provides simply the data sheet or CAD drawing for the respective product, the corresponding spare parts overview is online as well.

You can also download the complete catalogue from the KESSEL website.

Overview of test seals and quality marks

Test seals / quality marks for KESSEL products

LGA design tested and monitored

A recognised independent testing institute ensures that the European standards and all further requirements are met.

SKZ test seal

The quality seal testifies that the tested products have successfully passed through the testing, monitoring and certification stages.

SEG type approval certificate BVS 11 ATEX E 040 X

Proof that a device complies with the ATEX product guideline 94/9/EC. For devices and protection systems for proper use in potentially explosive areas, e.g. pumping stations.

■ Ü-Mark

Compliance certificate for national or international building products

CE-Mark

Manufacturer's compliance certificate based on Guideline 93/42 EWG for European building products. National standards concerning installation and use must still be met.

Quality mark for high quality stainless steel

AISI 304 or AISI 316L stainless steel meet all requirements for food production facilities and guarantee problem free functionality. KESSEL drain covers meet DIN 1253-1 requirements.

Red Dot design award

The Red Dot Award is an international design competition and is awarded reddot design award in the categories Product design and Communication design.

Dobrydesign award

The "DobryDesign" award is bestowed by a Polish interior decorating magazine and honours particularly attractive items in various segments.

Polyethylene warranty

KESSEL extends the warranty period for tanks beyond the statutory requirement to 20 years. This covers the water-tightness, usability and static safety of these components.

Certification

Management systems sustainability firmly in place

Four central management systems contribute to anchoring the mission statement and basic handling principles of KESSEL AG within the company. In addition, they are major components for implementing sustainable company management.

KESSEL has established the following management systems

- Quality Management
- Health & Safety Management
- Energy Management
- Environmental Protection Management

Through the participation of a large number of employees who either work directly in quality teams or are indirectly involved through their day-to-day work, the management systems form an important basis to include sustainable issues in the company structures and make sure they are lived and breathed.

KESSEL Certifications

ISO 9001 is quality management...

The ISO 9001 is an international standard which sets quidelines and standards which manufacturers must meet. It serves to ensure that customers get the quality they are expecting. The standard refers to quality and reliability of the products and services delivered and has been at the heart of process orientation within the KESSEL AG for years.

ISO 14001 is environment management...

Sustainable business is an act of common sense and responsibility for the future. The forward-looking, voluntary and systematic integration of environmental aspects in entrepreneurial decisions plays an important role here. Standard ISO 14001 provides a globally accepted basic for setting up an environment management system and specifies the principles according to which KESSEL AG acts.

ISO 50001 is energy management...

The standard specifies the requirements for establishing, implementing, maintaining and improving an energy management system, whose purpose is to enable an organization to follow a systematic approach in achieving continual improvement of energy performance, including energy efficiency, energy security, energy use and consumption. The standard aims to help us continually reduce energy use, and therefore our energy costs and greenhouse gas emissions.

Backwater protection

1 Backwater protection

Premium backwater valves

Page **24 - 35**

with mechanical or motor-driven backwater flap and pump for draining wastewater with sewage, even during backwater.

Classic backwater valves

Page **36 - 43**

with mechanical backwater flaps for protection against backwater.

Backwater valves in chamber for underground installation

Page **44 - 51**

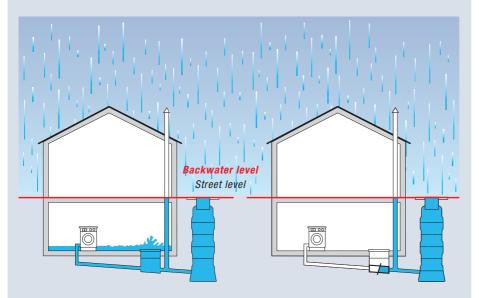

Frees up basement space by moving backwater protection to outside the house.

Individual Solutions

Page **52**

What is backwater?

All the outlet pipes from drainage fixtures in buildings (washing machines, showers, toilets etc.) are connected to the sewer, forming a linked pipe system. If the wastewater cannot flow freely through the sewer e.g. after heavy rainfall or due to blockages in the sewer pipes, it is pushed back into the connected outlet pipes and can flood all the areas of the house which are below the backwater level, including any fixtures and furnishings etc.

Problem: Draining system without backwater protection

During heavy rain, the water level rises above the so-called backwater level. This term is usually used to mean street level. Rooms in the basement or cellar quickly become flooded.

Damage caused by ruined flooring, furniture or electric appliances, soaked household goods results in a great deal of hassle and costs for those living in the house.

Solution: Draining system with backwater protection

Draining systems such as floor drains, washing machines, sinks, showers or toilets which are below the backwater level have to be protected effectively and permanently against backwater. Wastewater that flows with gravity drainage to the sewer has to be protected by a backwater valve.

If the public sewer is higher than the drainage spot in the building, the wastewater must be pumped upwards via a fully automatic lifting station.

Backwater is always possible

For economic reasons, mixed public sewage systems often cannot be dimensioned in such a way that they can deal with extremely heavy rain without any problems. For this reason, flooding of the sewer and backwater in all connected pipes must be expected during heavy rain.

In addition, backwater can occur for the following reasons:

- Blockage, burst pipes or damage to the sewage system.
- Pump failure, if the drainage system is connected to a pumping station.
- High water levels in the recipient (stream or river), since rainwater cannot flow away easily from low ground.
- Pipe blockage or diversion due to repair work.
- Increased wastewater feed, for example when sewage systems are being rinsed, the fire brigade is in action or more pipes are connected to the sewage system than originally planned.

Backwater protection – Everything specialists need to know

Heavy rainfalls more common

The problem of backwater has always existed, because for economic and technical reasons, sewage pipes are designed for average rainfall. This means the storm sewage pipe can fill up very quickly in the event of a cloudburst.

What is new is that meteorologists predict that heavy rainfalls will increase in future. The reason: global warming leads to more evaporation from the earth's surface. This fills rain clouds which then discharge torrential rain.

Specialist help is needed

At the end of the day, the building owner, home owner or renovators are out on their own. They have to protect their property from backwater, with or without insurance.

But what's the best way to do it? Who can assess the risk? What should they do? Who can they contact?

This is where specialist craftsmen are required. Backwater protection is a matter for professionals, not DIY specialists. For this reason, specialists must provide expert advice to home owners, building owners and renovators as to how they can best protect their properties from backwater.

The right product selection

The selection and use of backwater protection depends on several conditions. In particular, the wishes of the operator must be taken into account, as well as the drainage

fixture itself, the position of the sewage channel, type of sewage and the respective regulations.

Black water or grey water?

Black water

wastewater with sewage

Grey water

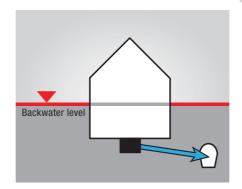

wastewater without sewage

When choosing which product you require, the distinction between wastewater with sewage (black water) and wastewater without sewage (grey water) is extremely important. The decisive factor is always the type of wastewater that flows through the backwater protection towards the sewer. Wastewater without sewage means water coming from showers or washing machines, for example.

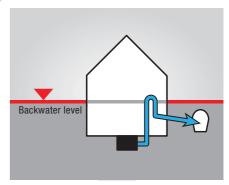

Wastewater with sewage is always involved whenever pipes are connected that transport water from urinals or toilets to the sewer.

Which type of wastewater is pushed back in the event of backwater (in other words from the sewer towards the backwater protection) is insignificant.

Gravity or no gravity?

Domestic wastewater is discharged with gravity drainage to the sewer backwater valves starting page 28

Public sewer is higher - wastewater must be lifted to the sewer via the backwater loop *>* pumping stations starting **page 26**

Installation possibilities

Example for installation in an exposed wastewater pipe

Example for installation in a concrete slab/floor

Example for underground installation

Exposed installation

Ideal for the renovation of old buildings which are in danger of backwater - the low-cost, clean and standard-conform solution for retrofitting backwater units!

To avoid the complete wastewater pipes having to be rerouted in expensive construction work, we recommend installing the central backwater protection unit in the existing exposed wastewater pipe. This guarantees free access to the backwater unit for maintenance work and pipe cleaning.

Installation in a concrete floor

The convenient, practical and attractive-looking version for new buildings creates additional accommodation space in the basement. High land prices often force clients who build a house on a small plot of land to use rooms in the basement to maximise the accommodation area. In addition, toilets, showers or utility rooms are often located in the basement.

The backwater protection unit is installed concealed in the floor. The easy-to-install set with a cover that can be tiled over as required can be used with a wide range of different interior styles and trends - whether the room in question is a music room, home office or sauna and spa.

Covers with a drain function for additional surface draining in an emergency (e.g. if the basement is flooded during heavy rain) provide even more safety. A special sealing set protects the basement from water pressure from below.

Underground installation

Up to now, products protecting against water penetration have mainly been installed inside buildings. In the meantime, however, new methods are available. For this, an inspection chamber is installed in front of the building where the backwater flap is installed.

If wastewater occurrence increases, the correct backwater protection unit can always be retrofitted e.g. when older residential areas are expanded or extensions are built on houses to cope with increased demand. This means clients and the local authorities are always on the safe side.

Equally, pumps and sewage lifting stations which so far have taken up a lot of space in the basement can now be installed in the chamber. Outside the building, they run quietly and reliably, and are easy to service.

Standards and regulations

Which standards must be taken into account?

EN standards	Description
12056-1	Gravity drainage systems inside buildings and performance requirements
12056-4	Gravity drainage systems inside buildings. Wastewater lifting plants - layout and calculation.
752	Gravity drainage systems outside buildings.
13564-1	Anti-flooding devices for buildings - requirements
1253-5	Gullies for buildings - closures for light liquids

The six product types of EN 13564

Backwater valves for through pipes are an ideal technical and, in particular, financial alternative to lifting stations. The usage conditions set out in EN 12056-4 must be given. According to EN 13564-1, a distinction is made between six types of backwater valves:

Type 0: Backwater valve for use in horizontal pipes with single free hanging backwater flap.

Type 1: Backwater valve for use in horizontal pipes with one automatic closure and one emergency closure, whereby this emergency closure may be combined with the automatic closure.

Type 2: Backwater valve for use in horizontal pipes with two automatic closures and one emergency closure, whereby this emergency closure may be combined with one of the two automatic closures.

Type 3: Backwater valve for use in horizontal pipes with one automatic closure operated by external energy (electric, pneumatic or other) and one emergency closure which is independent of the automatic closure.

Type 4: Backwater valve installed in drain fittings or floor drains, with one automatic closure and one emergency closure, whereby this emergency closure may be combined with the automatic closure.

Type 5: Backwater valve installed in drain fittings or floor drains, with two automatic closures and one emergency closure, whereby this emergency closure may be combined with one of the automatic closures.

INFORMATION

Do you require more detailed information? Our Service Centre will be happy to help.

You can find your personal KESSEL contact on page 3 of this catalog!

Complete System Solution

In addition to individual backwater valves, KESSEL also offers other systems for backwater protection.

- Lifting and pumping stations for free standing and underground installation see chapter 3 "lifting stations".
- Basement drains with backwater flaps or pump see chapter 4 "drains and channels".

Individual Solutions

Thanks to the knowledge and possibilities in the field of polyethylene technology KESSEL is not only able to manufacture series products, but also special solutions in accordance with project-specific requirements.

Tried-andtrusted backwater protection re-defined

Premium backwater valves for wastewater with and without sewage. Backwater valves discharge wastewater via gravity to the sewer. When there is backwater from the sewer, the backwater flaps close motor-driven (*Pumpfix F* and *Staufix FKA* version). In the case of *Staufix SWA*, the free hanging backwater flap is closed by the backwater. *Pumpfix F* also pumps wastewater to the sewer against the backwater.

Backwater pumping stations

for wastewater with or without sewage

Installation example Pumpfix F Komfort

- 1 Backwater pumping station
- 2 Control unit

3 Sealing gasket set

Pumpfix F pumps against backwater and discharges surface water. It protects drainage fixtures such as shower, sink, washing machine and outside steps down to the basement which are below the backwater level. The wastewater is discharged continually and without the use of energy to the sewer through gravity. In the event of backwater, reliable draining still takes place since the pump activates, macerates any solids and pumps the building's wastewater into the surcharged sewer. Control is by means of the Comfort control unit with self-diagnosis system SDS. The sealing gasket set Art. # 83023 makes installation in waterproof concrete possible.

Professional advantages

- Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.
- Integrated drain function to drain surface water.

- Variable upper section rotatable, tiltable and height adjustable
- Installation in waterproof concrete. Gasket set to prevent groundwater infiltration.

Installation body with only 9 mm gradient. Ideal for renovation work.

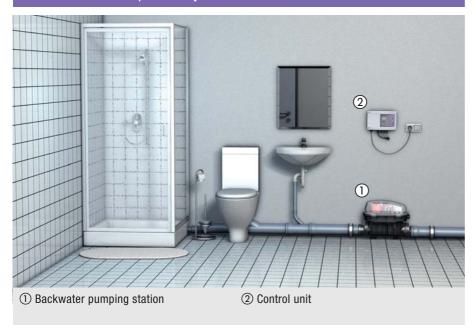

Scan this QR code to directly view the corresponding product video.

You Tube

Installation example Pumpfix F Komfort

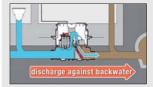

Function and range of application are identical to the system described above. The installation of the Pumpfix F is even easier in this case if the wastewater pipe is routed exposed across the basement floor. The Comfort control unit with SDS is part of the scope of supply here, too, so that safe system operation is guaranteed at all times. A low-cost investment for backwater protection in the basement compared with the property and building damage caused by basements flooded by backwater.

Professional advantages

- Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.
- Installation body with only 9 mm gradient. Ideal for renovation work.
- Fully open pipe passage with open backwater flap during normal conditions, flap is automatically closed with motor during backwater
- **Function**

- 2 Control unit

3 Sealing gasket set

Backwater valve Staufix FKA as central backwater protection for the simple and professional installation through the installation set provided. For toilets, showers, sinks and washing machines that are located in the basement. In the event of backwater from the sewer, the valve is sealed by a motor driven backwater flap and then opened again afterwards. Regular and automatic functional testing by the SDS system integrated in the control unit. The sealing gasket set Art. # 83023 makes installation in waterproof concrete possible.

Professional advantages

Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.

- Variable upper section rotatable, tiltable and height adjustable
- Installation in waterproof concrete. Gasket set to prevent groundwater infiltration.

Backwater protection even during construction phase thanks to 3-stage flap Freely suspended flap in the construction phase position.

You Tube

Installation example Staufix FKA Komfort

Function and range of application are identical to the system described above. Installation of the Staufix FKA is even easier in this case if the wastewater pipe is routed exposed across the basement floor. The Comfort control unit with SDS is part of the scope of supply here, too, so that safe system operation is guaranteed at all times.

Professional advantages

Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.

Installation body with only 9 mm gradient. Ideal for renovation work.

Backwater protection even during construction phase thanks to 3-stage flap Freely suspended flap in the construction phase position.

Installation example Staufix

Staufix twin flap backwater valve - the classical item in the KESSEL backwater range and the successful original. The current model is made of ABS, completely corrosion-free and can be serviced without tools. Protects individual drainage fixtures such as shower, sink and washing machine below the backwater level. Installation in the concrete slab with upper section Art. # 32500 and two cover plates Art. # 30004 S or for installation in an exposed wastewater pipe.

Professional advantages

- Tool-free servicing
- Everything made of polymer material corrosion-free
- Backwater flap made of stainless steel to keep rats and vermin out
- Perfect for renovation

Other valves with large drops are difficult to install. *Staufix* offers minimal drop between inlet/outlet (7 mm).

Can be retrofitted/converted after installation

Professional advantages

- Preventative backwater protection in new construction - also excellent for renovation.
- Unique twin flap system according to Norm.
- Quick and problem free installation.
- Prevents flooding from additional wastewater drainage pipes connected to same drainage system.
- Easy maintenance and service with tool free finger clips.
- Complete polymer construction no more rust
- Also usable for rodent protection.

** For wall installation

for wastewater without sewage

Installation example Multitube

Multitube single flap backwater valve for safe backwater protection. For use downstream from cisterns which are connected separately to a rainwater sewer or run into a recipient.

Professional advantages

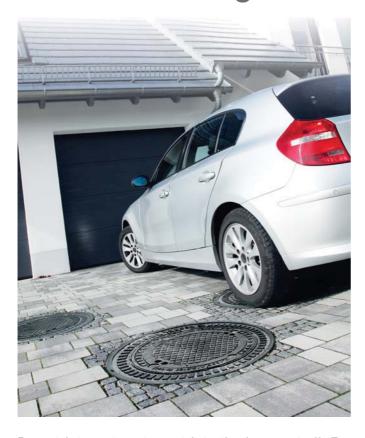

- Fully compatible with sea water and fresh water environments.
- Low weight for ease of installation yet with high mechanical strength.
- Simple design without counterweight - Good watertightness.
- Seals at a low level of back pressure.
- Low maintenance.

Pipe flap valve for the public, municipal and industrial sector. For safe protection against backwater, additional protection against rats, mice, frogs or vermin. For use downstream from cisterns which are connected separately to a rainwater sewer or run into a recipient and for seepage or pond systems.

Stop backwater before it reaches the building

Do not let wastewater get into the house at all. For this purpose, an inspection chamber housing the backwater protection is installed outside the building. This backwater flap protects the main drainage pipe, which is used to drain water from drains at risk of backwater only.

RETROFIT CONVERSION KITS

KESSEL Backwater Inspection Chambers are shipped including the *Controlfix* clean-out. This chamber can be used as a sewer inspection / access point or the chamber can be upgraded to three different types of backwater valves using a KESSEL conversion kit. The following conversion kits are available:

Conversion kit Pumpfix F

Motorized backwater valve with pump and Comfort control unit. Discharges wastewater containing raw sewage even during backwater!

Conversion kit Staufix FKA

Motorized backwater valve with Comfort control unit for wastewater containing raw sewage.

Conversion kit Staufix SWA

Twin flap backwater valve for wastewater without sewage.

* In-/Outlet \varnothing 200, hydraulics corresponds to \varnothing 160

Complete chamber made in one piece \varnothing 1000 mm

Backwater chamber

with three open channel passages

Komfort chamber modular system ∅ 800 / 1000 mm

Clean out Controlfix

with closed passage channel

SYSTEM ADVANTAGES / INSTALLATION

CONVENIENCE

More safety and additional living space in the basement. No operational noises in the building.

Complete chamber made in one piece \varnothing 1000 mm

Komfort chamber modular system \oslash 800 / 1000 mm

INSTALLATION

Straightforward installation thanks to low weight of the chamber parts

and variable upper sections for adaptation to the ground level.

Covers in various load classes - can also be driven over.

FLEXIBILITY

Further pipes can be connected.

SAFETY

Material is crack- and impact-resistant. Permanently watertight and root-proof.

20-year guarantee for PE material.

Backwater inspection chambers

for wastewater with sewage or wastewater without sewage

Installation example backwater inspection chamber \varnothing 1000

- 1 Backwater chamber
- 2 Clean out
- 3 Basement drains

- 4 Roof drains
- (5) Basement drainage

The KESSEL backwater chamber has a special cleaning opening as standard, for the use of KESSEL backwater valves as accessories - either during installation or at a later date. The wastewater from the building flows backwater-proof and gravity fed to the chamber and then to the sewer.

Three standard connections for basement drains, roof drains and basement drainage are included. Cover for garden installation is included in the scope of supply, further upper sections and covers of the classes A/B/D are available.

Professional advantages

Variable upper section inclinable and height adjustable upper sections available as accessory.

Upper section with cover plate

Upper section for standard bearing ring

Further accessories starting page 50

- Simple to assemble with light-weight inspection chamber components and easy connection technique.
- Long-term reliability with an absolute water-tight inspection chamber system which is resistant to sedimentary deposits and aggressive media as well as root infiltration.

Hybrid lifting station for sewage free wastewater and rainwater

During regular conditions the wastewater flows via gravity into the sewer. In the case of backwater, the motorized backwater flap of the *Staufix FKA* closes automatically and prevents wastewater from the flooded sewer from entering the building. Additionally, an electrically operated gate valve can be added to the system as a back-up pipe closure. While the backwater flap (and optional gate valve) are closed, wastewater flowing from the building overflow into a collection chamber equipped with powerful submersible pumps which will pump the building's wastewater into a pressure reduction chamber.

1	Pumping chamber with overflow system
2	Chamber with FKA backwater valve and electrical gate valve
3	Pressure reduction chamber

Hybrid lifting stations

2 Hybrid lifting stations

Backwater pumping station Page 58 - 63 Pumpfix F

For private and commercial applications. For gravity-fed wastewater pipes within or outside buildings.

Backwater lifting station Ecolift XL NEW

Page **64 - 72**

For private and commercial applications. For gravity-fed pipes within or outside buildings.

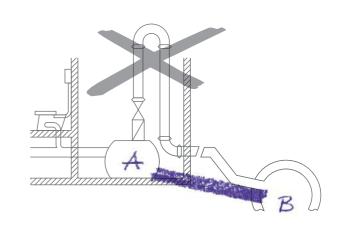

Constant running of a standard lifting station even with gravity sloped drainage. Why?

Lifting stations are often installed as a safety measure even though gravity sloped drainage is available. The disadvantage is that these systems must pump every single litre of collected wastewater. This leads to constant operation of the pumps, high energy usage, wear and tear on the system as well as nuisance noise - with the new KESSEL Hybrid Lifting Station, all these problems are solved.

The *Pumpfix* and *Ecolift XL* Hybrid Lifting Stations offer safe and reliable protection against backwater and come into service only when necessary - during backwater. The *Pumpfix* (for domestic applications) and the *Ecolift XL* (for commercial / industrial applications) are the new ideal solutions for installation in gravity wastewater drainage systems - both for new construction and renovations.

Function

Normal Mode:

- $\hfill\square$ No pump operation
- ☐ No energy requirements
- ☐ No pumping noises
- $\ \square$ Wastewater disposal even after power failure
- ☐ No interruption in operation even if pump fails

Surcharged sewer:

 $\hfill \square$ Motorized backwater flap(s) close to prevent backwater from entering building

Wastewater disposal in an event of backwater:

☐ Wastewater is pumped into the sewer

Installation possibilities

Example for installation in an exposed wastewater pipe

Example for installation in a concrete slab/floor

Example for underground installation

Exposed installation

Ideal for the renovation of old buildings which are in danger of backwater - the low-cost, clean and standard-conform solution for retrofitting backwater units!

To avoid the complete wastewater pipes having to be rerouted in expensive construction work, we recommend installing the backwater pumping unit in the existing exposed wastewater pipe. This guarantees free access to the backwater unit for maintenance work and pipe cleaning.

SmartSelect simply makes planning easier - calculation tool for lifting stations at smartselect.kessel.com

Installation in a concrete floor

The convenient, practical and attractive-looking version for new buildings creates additional accommodation space in the basement. High land prices often force clients who build a house on a small plot of land to use rooms in the basement to maximise the accommodation area. In addition, toilets, showers or utility rooms are often located in the basement.

The backwater pumping unit is installed concealed in the floor. The easy-to-install set with a cover that can be tiled over as required can be used with a wide range of different interior styles and trends - whether the room in question is a music room, home office or sauna and spa.

Covers with a drain function for additional surface draining in an emergency (e.g. if the basement is flooded during heavy rain) provide even more safety. A special sealing set protects the basement from water pressure from below.

Underground installation

Up to now, products protecting against water penetration have mainly been installed inside buildings. In the meantime, however, new methods are available. For this, an inspection chamber is installed in front of the building where the backwater flaps and pumps are installed.

Outside the building, hybrid lifting stations run quietly and reliably, and are easy to service.

Backwater pumping stations *Pumpfix F* for domestic applications

SmartSelect simply makes planning easier - calculation tool for lifting stations at smartselect.kessel.com

Backwater pumping station *Pumpfix F*Installation in the concrete slab/floor

Backwater valve and lifting station in one

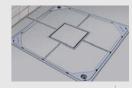

Modern and cost-saving hybrid solution with innovative double function.

As inexpensive as a backwater valve, as safe as a lifting station. *Pumpfix F* uses the natural gradient to the sewer for wastewater disposal. Efficient and economical pump use only in the event of backwater or basement flooding (with underground installation). Wastewater drained via pressure pipe to the sewer.

With technical approval: Z-53.2-487

COVERS CAN BE INDIVIDUALLY TILED

No open pump sump or maintenance space required per EN 12056, Part 4 -means more living space

VENTILATION

Integrated ventilation eliminates the requirement for costly roof ventilation pipes

PUMP

Powerful macerating pump for wastewater containing sewage (WC connection)

MOTOR

Automatically closes the backwater flap in the event of backwater

FLAP

Closed backwater flap with integrated gasket provides secure and reliable protection during backwater

BODY WITH ONLY 9 MM GRADIENT Ideal for renovation work

Backwater pumping stations **Pumpfix F**

INTEGRATED DRAIN **FUNCTION TO DRAIN** SURFACE WATER

Continual drainage even in the event of a basement flooding

PLUG & PLAY COMFORT CONTROL UNITS

with self-diagnosis system SDS and multilingual display (EN, DE, FR, IT, PL, NL) - can be connected without a qualified electrician.

TeleControl telemetric system for relaying full text messages to mobile phones available as accessory.

with multilingual (EN, DE, FR, IT, PL, NL) digital display for operating state and servicing instructions as well as connection option for building management system

FLEXIBLE INSTALLATION

More flexibility and reliability when installed in concrete slabs, new extension system with optional center located sealing flange for connection to waterproofing membranes

REMOVABLE INLET/OUTLET CONNECTIONS - ALSO IN Ø 200

 $\ \square$ Flange/spigot for customized connections

Installation example Pumpfix F Komfort

- ① Backwater pumping station
- 2 Control unit

3 Sealing gasket set

Pumpfix F pumps against backwater and discharges surface water. It protects drainage fixtures such as shower, sink, washing machine and outside steps down to the basement which are below the backwater level. The wastewater is discharged continually and without the use of energy to the sewer through gravity. In the event of backwater, reliable draining still takes place since the pump activates, macerates any solids and pumps the building's wastewater into the surcharged sewer. Control is by means of the Comfort control unit with self-diagnosis system SDS. The sealing gasket set Art. # 83 023 makes installation in waterproof concrete possible.

Professional advantages

- Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.
- Integrated drain function to drain surface water.

- Variable upper section rotatable, tiltable and height adjustable
- Installation in waterproof concrete.
 Gasket set to prevent groundwater infiltration.

Installation body with only 9 mm gradient. Ideal for renovation work.

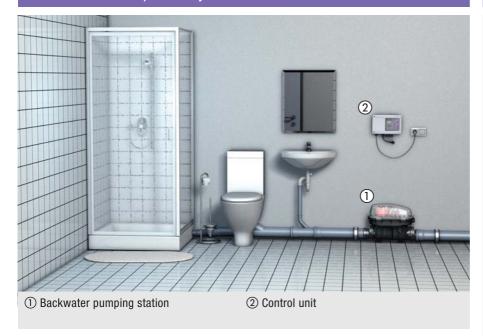

Scan this QR code to directly view the corresponding product video.

You Tube

Installation example Pumpfix F Komfort

Function and range of application are identical to the system described above. The installation of the *Pumpfix F* is even easier in this case if the wastewater pipe is routed exposed across the basement floor. The Comfort control unit with SDS is part of the scope of supply here, too, so that safe system operation is guaranteed at all times. A low-cost investment for backwater protection in the basement compared with the property and building damage caused by basements flooded by backwater.

Professional advantages

- Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.
- Installation body with only 9 mm gradient. Ideal for renovation work.
- Fully open pipe passage
 with open backwater flap during normal
 conditions, flap is automatically closed
 with motor during backwater
- Function

Normal mode: Water drains with gravity

Backwater: Backwater flap is closed, pump activates, wastewater is discharged

The new hybrid lifting station *Ecolift XL*

The hybrid lifting station *Ecolift XL* uses little power, runs without interruption and reduces pump wear and tear. *Ecolift XL* is also reliable, easy to install and economic.

Hybrid lifting station *Ecolift XL*For free standing installation - Page 68

ENGINEERING SYSTEM BASE

For indoor / free standing installation, for installation in a concrete floor, or outdoor underground installation in combination with the engineering systems chamber

SAFETY / RELIABILITY

Pneumatic level sensing and alarm sensor offer twice the reliability

INTEGRATED CLOSURE VALVE

With safety lock to prevent accidental closure

PUMP PERFORMANCE

Multiple pumps available with

- SPF 1500 (1.4 kW)
- SPF 3000 (3.2 KW)
- SPF 4500 (4.5 kW)

GROUNDWATER RESISTANT

New chamber can handle up to 3000 mm of groundwater pressure

SOUND / VIBRATION DECOUPLING

All active components and the outlet pressure pipe are sound decoupled from the chamber

Hybrid lifting station *Ecolift XL*For minimum installation depth - Page 66

Hybrid lifting station *Ecolift XL*For installation depths up to 5 m - Page 68

Certification Z-42.1-527

ENGINEERING SYSTEMS CHAMBER

For use in combination with the *Ecolift XL* Hybrid Lifting Station for installation in the concrete slab or outdoors underground

PRESSURE OUTLET CONNECTION

Quick-release, no tools required

PRESSURE OUTLET Ø 90 mm (OD)

INLET / OUTLET
Standard size Ø 160 mm (OD)

BACKWATER FLAP CLOSURE SYSTEM

Available with up to two motorized backwater flaps for maximum backwater protection

CHAMBER COVERS

Available in a stainless steel class A/L15 (tileable or not tileable) or in load classes B and D

CONNECTION SYSTEM

The new chamber allows simple and fully watertight connections of the chamber components

GROUNDWATER RESISTANCE

For installation in up to 3000 mm of groundwater

VERTICALLY ADJUSTABLE UPPER SECTION

Available with \emptyset 600 mm or \emptyset 800 mm diameter with optional waterproofing connection flange

ADDITIONAL INLET CONNECTIONS

Three areas are available for easy on-site connection of conduit or ventilation pipes

MODULAR SYSTEM

Sectional chamber components available in 250 mm and 500 mm heights

HONEYCOMB CHAMBER DESIGN

Provides additional chamber strength and prevents buoyancy. Additional inlets up to size \emptyset 160 mm can be installed on-site

for wastewater with or without sewage

Underground installation outside buildings

- 1 Hybrid lifting station
- 2) Pressure pipe

The hybrid lifting station $Ecolift\ XL$ is suitable for use in multi-family homes or commercial buildings. If installation in the concrete slab is not possible, it is possible to install the $Ecolift\ XL$ outside the building. This allows rows of showers or sanitary facilities to be drained via the $Ecolift\ XL$, for example. If the ground level is below the backwater level, the whole building can be connected to the system.

Professional advantages

- Pneumatic level sensing and alarm sensor offer twice the reliability
- Integrated closure valve with safety lock to prevent accidental closure
- Backwater flap closure system available with up to two motorized backwater flaps for maximum backwater protection.
- Quick-release pressure outlet connection, no tools required

Professional advantages

Ecolift XL for installation depth up to 5 m

- (1) Hybrid lifting station
- (2) Engineering chamber
- ③ Pressure pipe
- 4) Pressure relief chamber

The hybrid lifting station *Ecolift XL* is suitable for underground installation and has been integrated into a newly designed, standard-conform polymer chamber for this application case. The wastewater collected is routed through the Ecolift XL and only pumped via the pressure pipe in the event of backwater. Where hybrid lifting stations with SPF 4500 pump are used we recommend routing the pressure pipe through a pressure relief chamber.

Ecolift XL for free standing installation

- ① Grease separator
- 2 Hybrid lifting station
- ③ Pressure pipe

The hybrid lifting station *Ecolift XL* is suitable for applications where significant wastewater occurs. This is the case where grease separators are in use, for example, with large quantities of wastewater usually being pumped out of the kitchen via classic double lifting stations into the sewer. The new hybrid lifting station Ecolift XL for free-standing installation, on the other hand, uses natural gradient in normal operation and only pumps the wastewater into the sewer when backwater has occurred.

Water flows upwards?

It often happens that wastewater cannot be drained with gravity because the sewer is higher than the drainage point in the basement. In this case a lifting station or pump must be used. Lifting stations pump the wastewater via pressure pipes into the sewer.

If the sewer is higher than the drainage point in the basement, a lifting station has to be used

Different product lines are available for the two different types of wastewater

For wastewater

with sewage

For wastewater without sewage

When it comes to draining toilets and urinals, sewage lifting stations must be used. The lifting stations of the Aqualift F series are available for installation in the interior or exterior of buildings. All lifting stations are also available as twin stations.

Household wastewater from washing machines, showers or bathtubs. The lifting stations Aqualift S and Minilift can be used for these drainage purposes.

Non-chokable or macerator pumps?

The reliable function depends on selecting the appropriate lifting station and also on the technically correct installation of the lifting station. KESSEL offers two types of pumps. Non-chokable pumps and macerator pumps. Each of these pumps has special properties.

Non-chokable pumps have a large free space inside the pump housing. As a consequence, solid and long fibrous,

high consistency substances, such as sanitary towels, textiles etc., can pass through the pump housing easily. It is often necessary to expend more energy to achieve an efficient pump output.

Macerator pumps are especially suitable for long fibres and where solid bodies can be comminuted, even larger

sizes. This allows the wastewater to be transported reliably through small pressure pipes even over long distances (pressure drainage).

The appropriate lifting station

Particle size: The particle size of a pump specifies how many millimetres of free passage through the pump are available. According to the construction and testing regulations (EN 12050-2) for wastewater lifting stations for wastewater without sewage (grey water), the maximum solids size (particle size) in the overall system is 10 mm, for wastewater with sewage (black water) it is 40 mm (EN 12050-1).

Pumping volume: Another important point is the pumping volume of a lifting station. EN 12056-4 requires the pumping volume of the system to be larger than the total volume of the pressure pipe. This means that the wastewater in the pressure line is replaced during every pumping process. And if the backwater preventer is leaking this does not lead to the pump switching on and off all the time.

Explosion protection: Accidents or spills could result in hazardous liquids entering the lifting station which could result in an explosion risk environment. If the possibility is real, an ATEX explosion protected pumping system should be used.

Installation options

Example for installation in an exposed wastewater pipe

Example for installation in a concrete slab/floor

Example for underground installation

Exposed installation

Free-standing lifting stations can be installed very easily and without a great deal of expenditure, and are suitable for single-family homes all the way up to larger commercial / industrial applications. Smaller systems can easily be placed in an existing basement room. Larger systems are better installed in a separate utility room.

Installation in a concrete floor

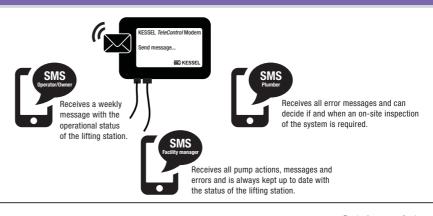

The use of basements to provide further space for accommodation is becoming increasingly important. Frequently, toilets, showers or washing facilities are located in the basement. For such applications, KESSEL supplies lifting stations for installation in concrete floors. These lifting stations simply disappear in the ground and offer another special advantage. The drain integrated in the cover can drain away all surface water. Even in the event of a pipe burst or leak, the pump discharges water continually over the backwater level.

Underground installation

Installing lifting stations within a building often wastes valuable living space as well as potentially causing operational noise. New solutions are available giving the home owner decisive advantages. Often the correct choice is to move the lifting station outdoors - freeing up living space, eliminating operation noise as well as making access for servicing companies more convenient. Depending on the requirements KESSEL offers single or twin pump systems and various chamber diameters based on the size of the pumps required.

Telemetric system

The KESSEL *TeleControl* system allows pump activity, messages or errors to be sent via a GSM interface to up to three mobile phones. This keeps the pump operator informed about the current operational status of the lifting station and allows quick reaction time if required.

General information and standards

Level sensors / probes and alarm probes

Level sensors and probes measure the level of the pumping medium in the collecting tank of a lifting station and trigger the pumping process of one or several pumps from a specified filling level onward. If the level in the collecting tank continues to rise, an acoustic warning signal can be give via an alarm probe (which also measures the level of the pumping medium).

Pressure sensor

The closed air volume within a pressure sensor is compressed by a rising water level in the collecting tank of a lifting station. The resulting difference in air pressure is measured by a pressure sensor in the control unit and used to regulate the starting and stopping of the lifting station pumping process. Pneumatic level measurement is a straightforward and low-cost method of level measurement, but does have disadvantages when the system is used irregularly, when wastewater is extremely greasy or when pressure hoses are very long or condensate in the pressure hose impedes measurement.

Conductance probe

and measures whether there is any conductive fluid between two measuring points. If there is, current flows and the control unit triggers the pumping process. Thus a conductance probe is a simple and low-cost method of level measurement. It only works with conductive fluids, however, and cannot be used for the pumping of rainwater or condensate.

A conductance probe uses AC voltage

Float switch

Float switches are switching devices which are actuated by a float which swims on the surface of the pumping medium.

If the water level rises within the collecting tank, the switching device is triggered via the change in level of the float, and the lifting station pump is activated.

Float switches are a simple and proven type of level measurement. They have some weaknesses when heavily soiled wastewater is to be pumped, since material becomes deposited on the float and can interfere with level measurement.

Hyd

Hydrostatic sensor

With this method of hydrostatic pressure measurement, the water

pressure is measured using a semiconductor and the downstream electronics generate an analogue signal from this. The pumps are activated from a specified level onward.

A hydrostatic sensor can be used to measure different levels. This makes it possible to measure both the alarm level and pumping level and save on a second probe. However, such hydrostatic sensors usually cost more than other level probes.

Optical probe

In addition to the level sensors described above, an optical probe

can be used as an alarm probe. If the sensor surface becomes wet, the refraction angle of an infrared signal changes, signalling that the alarm level has been reached.

The optical probe is ideal as an alarm probe since it works reliably even if it has not been in use for a long time. An alarm can be triggered by mistake, however, when the wastewater is warm (dripping condensate) or heavily foaming.

INFORMATION

Do you require more detailed information? Our Service Centre will be happy to help.

You can find your personal KESSEL contact on page 3 of this catalog!

Complete System Solution

In addition to individual lifting and pumping station, KESSEL also offers other systems the drainage of buildings. Do you have a natural gradient to the sewer?

- World innovation Ecolift the alternative to a standard lifting station with gravity sloped drainage see chapter 2 "hybrid lifting systems".
- Backwater valves for interior and underground installation see chapter 1 "backwater valves".

Individual Solutions

Thanks to the knowledge and possibilities in the field of polyethylene technology KESSEL is not only able to manufacture series products, but also special solutions in accordance with project-specific requirements.

References

Over the past decades, KESSEL products have proven themselves countless times in destinations all over the world. Scan the following QR code to directly view our list of references.

Single- / Twin station 40 liter tank volume

Wastewater lifting stations Aqualift F Compact

for installation in a concrete floor

Compact and powerful lifting stations

Suitable for use in industrial and residential applications.

Installed in the concrete slab / floor, the lifting station is almost invisible thanks to the tilable cover.

With technical approval: Z-53.2-484

CHAMBER READY FOR UNDERGROUND INSTALLATION

The telescopic upper section makes flexible adaptation to the required installation depth possible. Upper section can be turned, tilted and freely height-adjusted.

RETROFITTING

Mono systems can be retrofitted and converted into duo systems, even after installation

INSTALLATION IN WATERPROOF CONCRETE

The compression seal flange in connection with the gasket set guarantees safe sealing against groundwater when the *Aqualift F Compact* is installed in waterproof concrete.

Single station
40 liter tank volume

Twin station
40 liter tank volume

for wastewater disposal in a single toilet

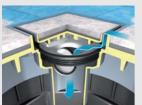

Wastewater lifting stations **Aqualift F Compact**

for free standing installation

Small lifting station Minilift F

for free-standing installation in frost protected rooms

INTEGRATED DRAIN FUNCTION

The drain contained in the cover drains all surface water. Even in the event of a pipe burst or flooding, the pump discharges water out of the house and into the sewer.

MAXIMUM SAFETY THANKS TO CONTROL UNIT WITH SDS

The intelligent control unit with integrated self-diagnosis system SDS and battery buffering continually monitors all electric functions and keeps an electronic operating log which can be read out. If the pump is at a standstill for longer periods, it is automatically activated briefly once a week.

NEW

Minilift F for free-standing installation

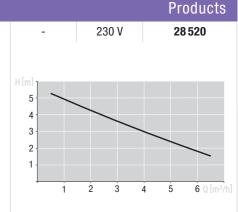

Small lifting station Minilift F made of polymer for free-standing installation in frost protected rooms

Plug-and-play sewage lifting station with chopping device for wastewater disposal in a single toilet.

For free-standing set-up

With pneumatic level control, with activated carbon filter, with dry room monitoring

EN 12050-3

Installation example Aqualift F Compact

- 1 Lifting station
- 2 Pressure pipe set (Art. # 28 040)
- (3) Extension section

- 4 Gasket set
- (5) Control unit

The wastewater lifting station *Aqualift F Compact* takes over the complete basement drainage and pumps wastewater reliably and completely automatically through the pressure pipe set via the backwater level to the higher-level sewage system. The system is delivered as a ready-to-install chamber which can be installed in waterproof concrete with the aid of the extension section and sealing gasket set. Control is by means of the Comfort control unit with self-diagnosis system SDS. Installation in the concrete slab/floor makes the *Aqualift F Compact* the modern alternative to a "pump sump".

Installation example Aqualift F Compact

1 Lifting station

② Control unit

The wastewater lifting station *Aqualift F Compact* takes over the complete basement drainage and pumps wastewater with and without sewage reliably and completely automatically via the backwater level to the higher-level sewage system. Control is by means of the Comfort control unit with self-diagnosis system SDS. Its compact design makes the system ideal for renovation work.

Professional advantages

- Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.
- Integrated drain function to drain surface water. Continual drainage even in the event of incoming flood water or a pipe burst.
- Variable upper section rotatable, tiltable and height adjustable
- Installation in waterproof concrete. Gasket set (Art. # 83 023) to prevent groundwater infiltration.
- Elegant optical appearance even for basement rooms which are used as living accommodation: The modern alternative to a pump chamber.
- TeleControl telemetric system Relaying of full text messages to up to three mobile phones.
- Chamber ready to be installed, recessed installation in the concrete slab/floor possible with extension section.

Scan this QR code to directly view the corresponding product video.

You Tube

Professional advantages

Plug & play Comfort control unit with self-diagnosis system SDS for maximum safety.

- Ideal for later installation, including for renovation work, and for installation in an existing pump sump.
- Space-saving
 Compact lifting station base area only 70 x 70 cm.
- Ready for connection
 Assembled ready for connection with horizontal or vertical pressure outlet.
- Additional inlets
 Possible connection of additional inlets directly on site.

Powerful Aqualift F / XL lifting stations

For industrial, municipal and private use.

All the components of the *XL* lifting stations have been designed as a modular system. It comprises three tank sizes with volumes of 200, 300 and 450 litres. The pumps are available in versions from 1.400 to 5.500 Watts. The tanks fit through standard size 800 doors.

50 liter tank volume

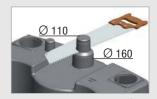

120 liter tank volume

Lifting stations *Aqualift F*

for single-family homes, apartment blocks or small scale industrial use

INLET CONNECTION

Size \varnothing 110 mm or \varnothing 160 mm selected on-site.

PRESSURE SENSOR

Pressure sensor controlled pump with non-chokable impeller.

ODOUR-TIGHT

100 % odour-tight access cover

ADDITIONAL INLETS

 \emptyset 50 mm to \emptyset 200 mm inlets can be easily installed on-site.

Lifting stations **Aqualift F XL**

for industrial / high volume wastewater disposal

CLOSURE VALVE

Polymer or cast iron closure valves available as accessory.

with multilingual digital display (EN, DE, FR, IT, PL, NL) showing current operational status, settings and logbook.

TeleControl telemetric system available as accesory.

S1-PUMPS

S1 continuous duty pumps for heavy flow applications (rainwater) with 1400 to 4500 Watts.

TANK BASE

integrated sloped base directs wastewater to pump intake and prevents dirt being deposited.

INTEGRATED NON-RETURN VALVE

COMPACT DIMENSIONED BODIES

offer large storage capacities but still allow access through 800 mm wide doorways.

for wastewater with or without sewage

Installation example Aqualift F

The lifting station Aqualift F is ideal for free-standing installation in frost-protected areas. The compact and powerful lifting station with control unit disposes of wastewater with or without sewage reliably and fully automatically through the pressure pipe to the higher-level sewage system.

* according to EN 12056-4

Professional advantages

Quality and reliability are our strengths:

- Space-saving installation thanks to the possibility of inlet connection \varnothing 110 from above and simple routing of the pressure pipe in the corner of the room.
- Simple connect-and-go connection with horizontal or vertical pressure outlet
- Easy to retrofit with the suitable closure
- Variable connection possibilities for further inlets directly on site.

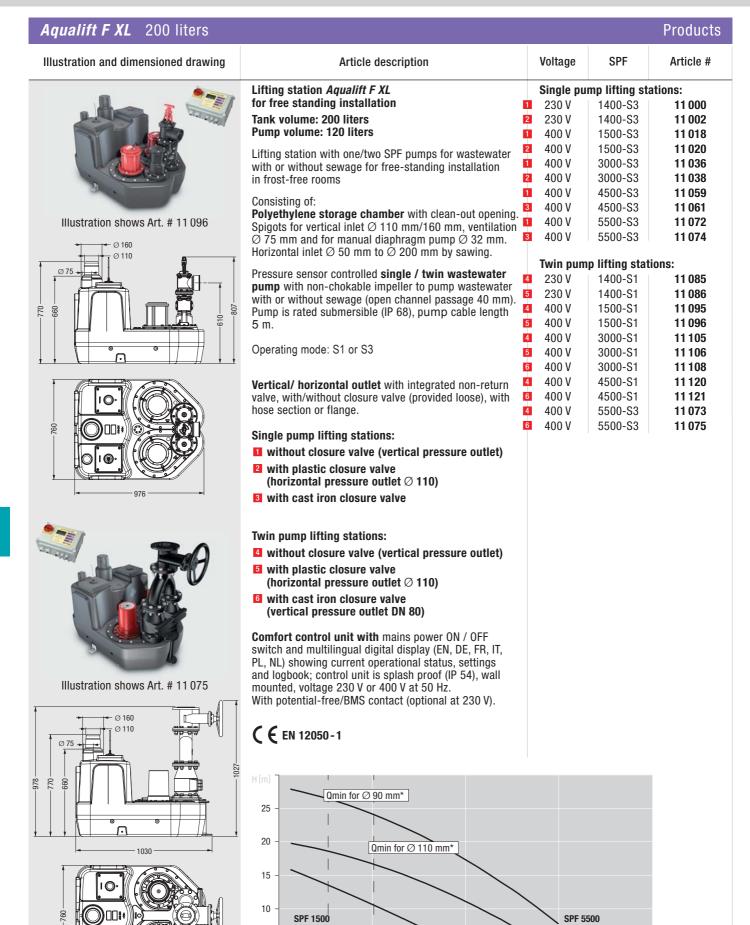

Comfort control unit

- User friendly navigation in multi-line display
- With self-diagnosis system SDS and memory function for the next service
- Displays current operational status
- Simple setting of parameters relevant for the function
- Operating hours counter
- Optional forwarding of alarm and general fault signals via a GSM interface
- Multilingual display (EN, DE, FR, IT, PL, NL)

Lifting station Aqualift F XL Twin pump lifting stations: for free standing installation 400 V 3000-S1 11 115 Tank volume: 450 liters 400 V 3000-S1 11116 Pump volume: 250 liters 6 400 V 3000-S1 11118 4 400 V 4500-S1 11126 Twin station with two SPF pumps for wastewater 4500-S1 6 400 V 11127 with or without sewage for free-standing installation 400 V 5500-S3 11 082 in frost-free rooms 400 V 5500-S3 11 083

Consisting of:

Polyethylene storage chamber, with air pressure level detector, clean-out opening.

Article description

Spigots for vertical inlet \varnothing 110 mm/160 mm, ventilation \varnothing 75 mm and for manual diaphragm pump \varnothing 32 mm. Horizontal inlet \varnothing 50 mm to \varnothing 200 mm by sawing.

Pressure sensor controlled twin wastewater pumps with non-chokable impeller to pump wastewater with or without sewage (open channel passage 40 mm). Pump is rated submersible (IP 68), pump cable length

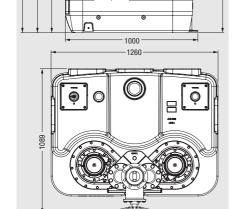

Operating mode: S1 or S3

Vertical/ horizontal outlet with integrated non-return valve, with/without closure valve (provided loose), with hose section or flange.

- without closure valve (vertical pressure outlet)
- 5 with plastic closure valve (horizontal pressure outlet \emptyset 110)
- 6 with cast iron closure valve (vertical pressure outlet DN 80)

Comfort control unit with mains power ON / OFF switch and multilingual digital display (EN, DE, FR, IT, PL, NL) showing current operational status, settings and logbook; control unit is splash proof (IP 54), wall mounted, voltage 400 V at 50 Hz. With potential-free/BMS contact.

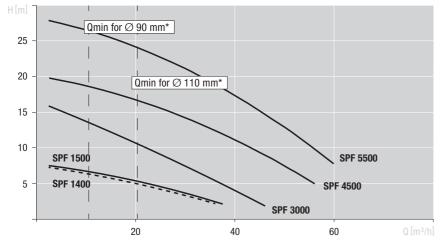

Ø 110 Ø 75

Installation example Aqualift F XL

The wastewater is pumped by the *Aqualift F XL* lifting station fully automatically upwards via the backwater loop to the sewage system. A greater pumping capacity if more wastewater occurs is guaranteed by a second pump switching on automatically. Long pump service life thanks to alternating operation. The lifting stations of the *Aqualift F XL* series are particularly suitable for industrial and municipal applications, such as downstream from a grease separator.

* according to EN 12056-4

Professional advantages

■ Inlet connection
Size Ø 110 mm or
Ø 160 mm selected
on-site

■ Additional inlet
connections on-site
Inlets from size
∅ 50 mm to
∅ 200 mm

inlets can be easily installed.

- Polymer gate closure valves and fittings for SPF 1400, 1500, 3000 models.

 Cast iron gate closure valves and fittings for SPF 4500 and 5500 models.

 Cast iron systems also available for other pump models where excessive return
- pump models where excessive return pressures are expected Compact dimensioned bodies offer large
- storage capacities but still allow access through 800 mm wide doorways.
- Single or Twin Pump Lifting Stations Includes digital display control unit and non-return valve.

Comfort control unit

- User friendly navigation in multi-line display
- With self-diagnosis system SDS and memory function for the next service
- Displays current operational status
- Simple setting of parameters relevant for the function
- Operating hours counter
- Optional forwarding of alarm and general fault signals via a GSM interface
- Multilingual display (EN, DE, FR, IT, PL, NL)

The hygienic alternative to a pump sump

Aqualift S lifting stations for installation in a concrete slab / floor dispose of penetrating high water or surface water resulting from burst pipes through fully automatic pump control.

Aqualift S lifting stations for free-standing installation are particularly suitable for connection to grease separator systems.

Minilift lifting stations - compact lifting stations for renovation work.

Single or twin pump lifting stations with additional surface drainage

Lifting stations **Aqualift S** for installation in a concrete slab/floor

Aqualift S INSTALLATION IN THE CONCRETE SLAB/FLOOR

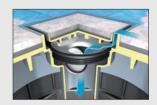

Installation set with integrated drain function for drainage of surface water.

INSTALLATION

Telescopic upper section with shallow waterproofing flange, recessed cover for on-site tiling and integrated drain function

ADDITIONAL SAFETY

Odour, foam, rodent and insect stop Multistop available as accessory

CONNECTIONS

Connection of optional inlets to drain body of \varnothing 110, above the compression flange and in the extension section up to \emptyset 75.

FLEXIBLE INSTALLATION

New extension section with central flange, counter-flange and elastomer waterproofing sheet optional - as protection against water load for installation in waterproof concrete.

Twin pump system

for connection downstream from small grease separator systems

Lifting station **Aqualift S**

for free-standing installation

Lifting stations *Minilift*

Ideal for renovation work

for free-standing installation / installation in concrete slab/floor

OPTICAL APPEARANCE

Elegant optical appearance even for cellar rooms which are used as living accommodation: The up-to-date alternative to the pump chamber.

SELF-DIAGNOSIS SYSTEM SDS

Plug-and-play 230 Volt control units with self-diagnosis system SDS. Comfort version with menu navigation in six languages with multi-line display. Chapter "Modems and control units" see page 128

Aqualift S FREE STANDING INSTALLATION

Particularly suitable as a lifting station for connection to small grease separator systems (with maximum pumping height of 3 m).

SNAP CLOSURE

Pump removal without tool thanks to "one-handed snap closure", also suitable for mobile use.

CONNECTIONS

Connection of further inlets \emptyset 50 and \emptyset 75.

Minilift

The mobile *Minilift* lifting station for free-standing installation fits under any sink; a washing machine, shower or other inlets can all be connected at the same time.

CLEANING AND MAINTENANCE

Pump removal without tool thanks to "one-handed snap closure", also suitable for mobile use.

FURTHER INLETS

Connection of further inlets \varnothing 50 and \varnothing 75 directly on site.

Installation example Aqualift S

- ① Lifting station Aqualift S
- 2 Pressure pipe set (Art. # 28 040)
- 3 Integrated drain

- 4 Gasket set
- (5) Control unit

The lifting station *Aqualift S* pumps wastewater without sewage through the pressure pipe set upwards via the backwater loop to the sewage system. In addition, surface water can be drained via the integrated drain following a burst pipe or high water penetration and be disposed of by the pump. The ready-to-install chamber can also be installed in waterproof concrete with the aid of the sealing gasket set. The system is controlled by means of the control unit provided.

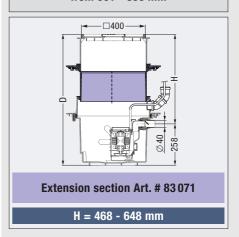

Current type	Voltage	Current	Power P ₁ / P ₂	RPM	Motor protection	Plug
Alternating current	230 V	2.12 A	480 W / 320 W	2800 min ⁻¹	integrated	Schuko 5 m cable

Professional advantages

Chamber ready to be installed, recessed installation in the concrete slab/floor possible with extension section.

D max. = 800 mm from 661 - 836 mm

- Integrated drain function to drain surface water. Continual drainage even in the event of incoming flood water or a pipe burst.
- Variable upper section rotatable, tiltable and height adjustable
- Installation in waterproof concrete. Gasket set (Art. # 83 023) to prevent groundwater infiltration.
- Elegant optical appearance even for basement rooms which are used as living accommodation: The up-to-date alternative to the pump chamber.
- Optional safety Cover with drain and *Multistop* odour, foam and rodent trap optional.

Comfort control unit

- User friendly navigation in multi-line display
- With self-diagnosis system SDS and memory function for the next service
- Displays current operational status
- Simple setting of the parameters relevant for the function
- Operating hours counter
- Optional forwarding of alarm and general fault signals via a GSM interface
- Multilingual display (EN, DE, FR, IT, PL, NL)

Lifting stations

Installation example *Minilift*

The lifting station Minilift is made up of a chamber for installation in the concrete slab/floor, a 300 W wastewater pump, a closed cover plate and a slotted cover. The chamber can be concreted in directly during foundation work or inserted into a recess later and then connected. Any installation depths can be realised using the extension section.

5 4 3 2

Current type	Voltage	Current	RPM	Motor protection	Plug
Alternating current	230 V	2.27 A	2800 min ⁻¹	integrated	Schuko 5 m cable

Installation example *Minilift*

The Minilift lifting station fits easily underneath any washbasin; it can also be connected to a washing machine, shower or other inlets. The station is equipped with a 300 W wastewater pump with a float control. The pressure pipe can be a PVC pipe Ø 40 mm. It is also possible using a screw connection 11/2 inch to connect the pressure pipe to the lifting station.

5 4 3 2 6 Q [m3/h

Current type	Voltage	Current	RPM	Motor protection	Plug
Alternating current	230 V	2.27 A	2800 min ⁻¹	integrated	Schuko 5 m cable

Professional advantages

- Chamber ready to be installed, recessed installation in the concrete slab/floor possible with extension section (Art. # 32 500).
- Integrated drain function to drain surface water. Continual drainage even in the event of incoming flood water or a pipe burst.
- Tool-free pump removal The "one-hand snap closure" feature means that no tools are required to remove the pump for cleaning and maintenance.

Professional advantages

Space-saving

The compact dimensions of the Minilift lifting station allow problem-free installation under a standard sink.

Tool-free pump removal

The "one-hand snap closure" feature means that no tools are required to remove the pump for cleaning and maintenance.

Connection of further inlets

Alongside the standard inlet in the cover, inlets can be attached at the side through the pre-scored areas.

Ventilation

No further ventilation pipes are required thanks to the integrated activated carbon filter.

SmartSelect simply makes planning easier - calculation tool for lifting stations at smartselect.kessel.com

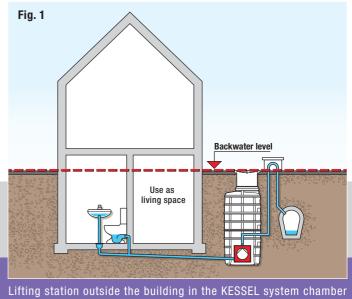

Pumping stations for underground installation

Installing lifting stations within the home often wastes valuable living/storage space as well as potentially causing nuisance operational noise.

New solutions are now available giving the home/ building owner decisive advantages.

SYSTEM ADVANTAGES / INSTALLATION

CONVENIENCE

Expensive living or useful space is not lost. No pump noises in the building. No odour pollution and soiling in the building (Fig. 1).

SAFETY

High pumping volume and additional reserve volume if the system should fail e.g. in the event of a power cut. 20-year guarantee for PE material.

CONTROL UNITS

Plug-and-play control units with self-diagnosis system SDS and monthly self-test. Comfort version with multi-line display for operating state and maintenance instructions (Fig. 2).

INSTALLATION

Straightforward installation thanks to low weight of the individual chamber parts with safe fastening technology (Fig. 3) and variable upper section for adaptation to the ground level (Fig. 4).

Underground installation outside buildings

for wastewater with or without sewage

- (1) Pumping station Aqualift F XL
- (2) Engineering systems chamber
- (3) Pressure pipe

Aqualift F XL disposes of large quantities of wastewater and is thus suitable not only for the classical application case of residential buildings, but also for commercial and industrial applications. The pumping station is available as a Mono or Duo station for wastewater with or without sewage. The tank volume is 335 litres, the maximum pumping volume is approx. 160 litres. Aqualift F XL is equipped with pneumatic level measurement and an alarm sensor. The pumping station is suitable for installation in the ground or in concrete floors. The engineering chamber is suitable for installation in groundwater up to 3000 mm. It is made up of modular chamber rings which are available in heights of 250 mm and 500 mm.

Professional advantages

- Control units with self-diagnosis system SDS for monitoring pump and battery buffering with monthly self-test. Comfort version with multi-line display for operating state and maintenance instruction as well as userfriendly menu guidance in six languages.
- Pneumatic level measurement and an alarm sensor for double safety
- With inlet 2 x 45° elbow Ø 160
- 2 additional pre-scored areas Ø 50 x Ø 200
- 100 % airtight screwed cleaning opening
- Tank floor resistant to groundwater depths up to 3000 mm
- Fitting with integrated backwater preventer and aeration device for simple bleeding of the pressure pipe
- Closure valve with safety hoop to prevent unintentional closing
- Pumps (Mono/Duo) in different capacity classes
- High pumping volume approx. 160 litres

Installation example pumping station Aqualift $F \varnothing 600$

- ① Pumping station
- 2 Pump

- 3 Pressure pipe
- 4 Pressure sensor

The pumping station $Aqualift F \oslash 600$ can be used for the draining of wastewater with or without sewage below the backwater level, as backwater protection for separator systems and for draining basement apartments or driveways. The wastewater flows with natural gradient to the collecting chamber and is pumped by the integrated pumps $SPZ\ 1000$ via the backwater loop to a higher-level sewage channel. The pressure pipe should always be laid frost-free. A control unit takes over the fully automatic pump control from within the building. Float switches or a pressure sensor are available as level sensors.

Туре	SPZ 1000
Current type	Alternating current
Voltage	230 V
Current	4.9 A
Power P1/P2	1080 W / 620 W
RPM	2800 min ⁻¹
Motor protection	integrated
Operating mode	S3 - 30 %

Professional advantages

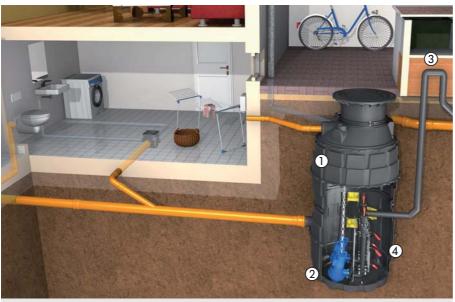

- Inexpensive complete system
- For draining wastewater with or without sewage
- For backwater protection connected to a separator
- Simple to assemble with light-weight inspection chamber components and easy connection technique.
- Quick to mount with a high level of pre-fabrication and easy connection using fixed couplings for inlet and pressure pipe and bores with lip gaskets for ventilation and cable piping.
- Variable upper section inclinable and height adjustable from 100 to 600 mm.
- Tool-free pump removal The "one-hand snap closure" feature means that no tools are required to remove the pump for cleaning and maintenance.

Article description	Pumping capacity
Pumping station Aqualift F in Komfort inspection chamber system Ø 1000 in PE-HD Single station/twin station for wastewater with or without sewage For underground installation	1.3 kW 1.3 kW 1.3 kW 1.3 kW 1.3 kW
 Single station Twin station Cover plate class A/B (Version B) 	1.3 kW 1.9 kW 1.9 kW 1.9 kW 1.9 kW
☐ Cover plate class D (Version D)	1.9 kW 1.9 kW
Including access steps, water-tight, resistant to aggressive media, upper section made of polymer, continuous height and level adjustment, cover class A/B, D in cast iron according to EN 124, inlet ⊘ 160, cable conduit connection ⊘ 110 according to EN 1401 and EN 12666-1 for ventilation pipes and cable piping respectively. Installation depth from 1.5 to 5 m (see table), Pumping volume approx. 180 liters. Pressure pipe ready mounted with backwater flap, closure valve. Single station with three float switches, twin station with four float switches	1.9 kW 1.3 kW 1.3 kW 1.3 kW 1.3 kW 1.3 kW 1.3 kW 1.3 kW
for level control with cable length 10 m, pressure pipe connection PE-HD Ø 63 and Ø 90. Submersible pump TPF 1.3 KE / TPF 1.9 KE explosion-proof, with macerating blades for pumping wastewater with or without sewage, submersible (IP 68), electrical cable length 10 m.	1.9 kW 1.9 kW 1.9 kW 1.9 kW
Electric control unit for fully automated pump operation, control unit is splash proof (IP 54), for wall mounting in dry, frost-free areas, PTB certification for installation in explosion risk areas, voltage 400 V at 50 Hz. With potential-free contact.	

With potential-free contact. Handles groundwater depths up to 500 mm (greater groundwater resistance on request) **Explosive proof**

*) Ø 90 by sawing off

Accessories see page 130 - 132

400 Volt Comfort control unit Art. # 860 000

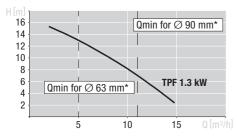

Installation example pumping station Aqualift F Ø 1000

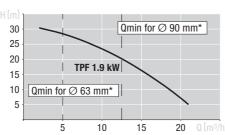

- ① Pumping station
- 2 Pump

- 3 Pressure pipe
- 4 Float switches

Domestic wastewater flows with natural gradient to the pumping station and is pumped by the integrated TPF macerator pump over long distances (pressure pipe) into the sewer. The pressure pipe should always be laid frost-free. A control unit takes over the fully automatic pump control from within the building. Float switches are used as level sensors. The system complies with the ATEX product directive and is suitable for installation in potentially explosive atmospheres.

* according to EN 12056-4

Pump type	TPF 1.3 KE
Power (P2)	1.3 kW
Input power (P1)	1.75 kW
Amperage	3.5 A
Fuses	3 x 16 A surge-proof
Voltage	400 V at 50 HZ
Cable length	10 m Length, 7 x 1.5 mm ²
Protection	IP 68 Ex-protection

Pump type	TPF 1.9 KE
Power (P2)	1.9 kW
Input power (P1)	2.6 kW
Amperage	4.5 A
Fuses	3 x 16 A surge-proof
Voltage	400 V at 50 HZ
Cable length	10 m Length, 7 x 1.5 mm ²
Protection	IP 68 Ex-protection

Professional advantages

- Variable upper section inclinable and height adjustable from 100 to 600 mm
- with mains power ON / OFF switch and multilingual digital display (EN, DE, FR, IT, PL, NL) showing current operational status, settings and logbook
- Simple to assemble with light-weight inspection chamber components and easy connection technique.
- Quick to mount with a high level of pre-fabrication (bottom part of inspection chamber with pressure pipe) and easy connection using fixed couplings for inlet and pressure pipe and bores with lip gaskets for ventilation and cable piping.
- Long-term reliability with an absolute water-tight inspection chamber system which is resistant to sedimentary deposits and aggressive media as well as root infiltration.
- Fully automated operation with an electrical control unit with manual, off and automatic mode, optical and audible warning and alarm notification, detailed operation and warning display, integrated pump rotation check, anti-blocking function, variable pump on and pump off settings.
- Systems with macerator permit the realisation of smaller dimensioning of the pressure pipes and longer distances to the sewage system.
- High pumping volume thanks to the pump chamber.
- Additional reserve volume if the system should fail e.g. in the event of a power cut.
- Further inlets up to Ø 160 can be attached on site, Ø 200 or larger in the factory.
- Suitable for installation in explosion risk areas

Installation example pumping station **Aqualift S** \varnothing 600

- ① Pumping station
- 2 Pump

- ③ Pressure pipe
- 4 Pressure sensor

The pumping station $Aqualift S \oslash 600$ can be used for the draining of wastewater without sewage below the backwater level, as backwater protection for separator systems and for draining basement apartments or driveways. The wastewater flows with natural gradient to the collecting chamber and is pumped by the integrated pumps $KTP \ 500 \ / \ GTF \ 1000$ to a higher-level sewage channel. The pressure pipe should always be laid frost-free. A control unit takes over the fully automatic pump control from within the building. Float switches or a pressure sensor are available as level sensors.

	KTP 500	GTF 1000
Current type	Alternating current	Alternating current
Voltage	230 V	230 V
Current	2.12 A	4.9 A
Power P1/P2	480 W / 310 W	1180 W / 720 W
RPM	2800 min ⁻¹	2800 min ⁻¹
Motor protection	integrated	integrated
Operating mode	S1	S3 - 30 %

Professional advantages

- Inexpensive complete system
- For draining wastewater without sewage
- For backwater protection connected after a grease separator
- Simple to assemble with light-weight inspection chamber components and easy connection technique.
- Quick to mount with a high level of pre-fabrication and easy connection using fixed couplings for inlet and pressure pipe and bores with lip gaskets for ventilation and cable piping.
- Variable upper section inclinable and height adjustable from 100 to 600 mm.
- Tool-free pump removal
 The "one-hand snap closure" feature
 means that no tools are required to remove
 the pump for cleaning and maintenance.

Warning and control units for versatile uses

The warning and control units can be used for a wide range of purposes e.g. as warning devices in household and industrial systems as well as for connection to a remote signal sensor.

The warning and control units with potential-free contact can be connected to the building management system (BMS). The electronic sensors react to all conductive fluids and the optical sensors to all conductive and non-conductive fluids.

Comfort control units

with multi-line digital display

INTEGRATED SELF-DIAGNOSIS-SYSTEM

With integrated Self-Diagnosis-System and battery buffering continually monitors all electronic functions.

TeleControl TELEMETRIC SYSTEM

For connection to KESSEL Comfort control units 230 Volt and 400 Volt. Relaying of full text messages to up to three mobile phones. Without SIM card.

ATEX VERSION

400 Volt control unit available in ATEX versions suitable for installation in potentially explosive atmospheres.

POTENTIAL-FREE CONTACT

BMS (Building Management System) connection standard with all 400 Volt systems (optional with 230 Volt systems).

PROBES

Connection possibilities for numerous probes for level measurement, float switches, conductance probes (230 V only), plungers, optical probe (230 V only), level probe (on clamping strip).

OPERATIONAL PARAMETERS

Operational parameters can easily be custom set by operator - Control unit also for use with pumps from other manufacturers.

Read-out of the electronic operating log and simple parameter adjustments

→ store read-out data on USB flash drive → load to PC and transmit by e-mail → read in optimised data again

MENU NAVIGATION

User-friendly menu navigation in six

ELECTRONIC LOG-BOOK

Electronic log-book function past history of pump operation is shown on digital control unit display.

USB-CONNECTION PORT

Includes internal USB connection port for 230 Volt control units. For read-out of electrical logbook and down / uploading of operational parameters.

USB housing socket optional.

READY FOR CONNECTION

230 Volt control unit ready for connection by coded connectors for pumps and pressure sensor - no need for a qualified electrician for connection.

Also suitable for third-party pumps

3	Outlet for pressure pipe	6	Loop via backwater level

Pumping station Aqualift F Duo, with overflow channel and backwater valve FKA

Function:

☐ Standard operation:

In standard operation, the connected drainage fixtures can drain by means of natural gravity through the open channel to the sewer.

Backwater protection:

If there is any backwater from the sewer, the sensor system in the backwater valve *Staufix FKA* detects backwater in the drain pipe and closes the motor-driven flap, thus securing the building.

■ Disposal during the backwater phase

Any wastewater from the building which occurs during this phase pours through the overflow opening into the pumping station. When the respective switching level is reached, the wastewater is disposed of by the pumping station into the sewer via the pressure pipe against the pressure of the backwater.

\square Standard operation:

After backwater the backwater valve *Staufix FKA* automatically re-opens, the connected drainage fixtures can be drained through the open channel again.

Lifting station Aqualift F XL 900 liters

Lifting station Aqualift F XL 900 L for free standing installation Tank volume: 900 liters Pump volume: 500 liters

Twin station with two SPF pumps for wastewater with or without sewage for free-standing installation in frost-free rooms

Consisting of:

Two Polyethylene storage chambers, with air pressure level detector, clean-out opening. Spigots for vertical inlet \varnothing 110 mm/160 mm, ventilation \varnothing 75 mm and for manual diaphragm pump \varnothing 32 mm. Horizontal inlet \varnothing 50 mm to \varnothing 200 mm by sawing. Pressure sensor controlled twin wastewater pumps with non-chokable impeller to pump wastewater with or without sewage (open channel passage 40 mm). Pump is rated submersible (IP 68), power cable length 10 m.

Operating mode:

S1: Continous duty

S3: 30 % power on duration

Vertical/ horizontal outlet with integrated non-return valve, with/without closure valve (provided loose), with hose section or flange.

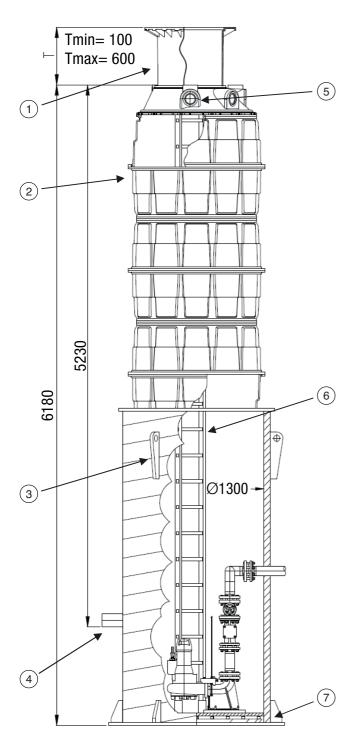

Comfort control unit with mains power ON / OFF switch and multilingual digital display (EN, DE, FR, IT, PL, NL) showing current operational status, settings and logbook; control unit is splash proof (IP 54), wall mounted,

voltage 230 V or 400 V at 50 Hz.With potential-free/BMS contact (optional on 230 V models).

Pumping station in re-enforced corrugated chamber \varnothing 1300

(for installation in groundwater-endangered areas)

1	Upper cover section, vertically adjustable, with cover class B
2	Chamber system Komfort Ø 1000
3	Load and transport connection hooks
4	Inlet up to ∅ 200
5	Connection seal Ø 110 (cable conduit and ventilation)
6	Access ladder
7	Corrugated chamber Ø 1300, with re-enforced, ground plate

Tender text:

KESSEL chamber system Ø **1300** made of polyethylene (PE-HD) as a collecting tank for housing a lifting/pumping station, **for installation in the ground 5.330 - 5.830 mm**, round version, waterproof, resistant to aggressive wastewater, comprising:

- $\hfill\Box$ Re-enforced corrugated chamber according to DIN 16961, \varnothing 1300, further set-up with Komfort chamber system \varnothing 1000
- □ with re-enforced, ground plate
- □ **Upper section** made of thermoset 2K (\emptyset = 630 mm) for continuous height and level compensation
- Cover Cl. B made of cast iron according to EN 124, with lift-out key
- \square one PE-HD socket **up to** \varnothing **200** (inlet)
- ☐ two connection seals up to Ø 110 (cable conduit, ventilation/aeration)
 - ☐ Access ladder made of GRP (CW= 300 mm, rung spacing 250 mm)
 - ☐ three load and transport connection hooks

Overall depth of the shaft structure: 6180 mm + T (Tmin= 100, Tmax= 600)

Please note the following:

- When the system is installed in a groundwater-endangered area, the structure must be anchored on site in concrete as buoyancy protection.
- Where drop heights of more than 5 m are involved, safety measures must be taken on site.

In accordance with GUV V-36 and BGV D36 $\S 5$ Sect. 9 access ladders and iron rungs for entry which have a fall height of more than 5.00 m must be equipped with on-site safety measures to prevent people falling.

On request and at extra charge, the shaft structure can be fitted with a high-quality safety package in the factory, this comprises:

- ☐ Climbing protection rail made of stainless steel AISI 316L (1.4571)
- ☐ Slide mechanism made of stainless steel AISI 316L (1.4571)
- ☐ Safety harness (DIN EN 361)
- ☐ Entry aid, for entry / exiting chamber (AISI 316L)

Drains and channels

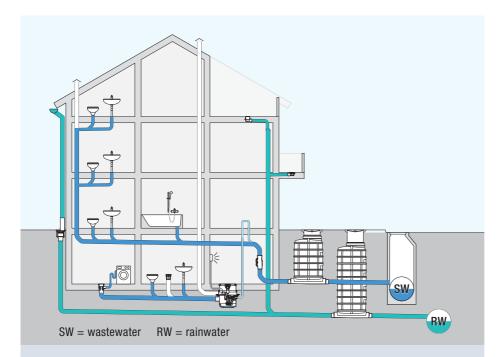

Drainage: how it works

How it works:

Drains are designed to receive, collect and convey wastewater. These can be bathroom, floor, ceiling, roof or special drains and also include balcony and yard drains. One important aspect is that usually only the outlet side needs to be considered, not the inlet side. The inlet fittings do dispense a certain amount of water, but this is only rarely or never decisive for the dimensioning of drains because the water is collected by most draining points and temporarily stored.

Accordingly, in compliance with EN 1253, section 6.1.4 or DIN 19541 drains must have the following odour trap heights:

- Drains with sealing water replacement bathroom drains: 50 mm (Euro standard)
- Drains with rainwater gutter drains: 100 mm

Larger trap heights are necessary for rooms with a slight vacuum or overpressure in order to avoid the water seal to escape and wastewater gases being siphoned into the room. If a sealing water height suitable for the pressures cannot be achieved, the route should pass via a connecting pipe with shut-off function.

When drains are installed outdoors they must be frost-free. The easily accessible cleaning opening required for drains must be achieved using removable odour traps.

Dimensioning

The outlet (\varnothing in mm) used for floor drains and drain pipes must be selected in such a way that the draining capacity corresponds to the occurrence of wastewater.

Connection values of drainage fixtures and diameters for individual connection pipes are summarised in DIN 1986-100. According to this, the following values can be taken as a basis for floor drains:

Floor drains

- 0 0 50 = 1.0 l/sec.
- \emptyset 75 = 1.5 l/sec.
- \bigcirc 0 110 = 2.0 l/sec.

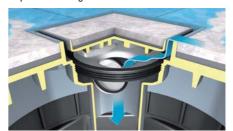

Odour trap

Odour traps are used to stop foul-smelling gases from the sewage system finding their way inside buildings and must comply with the respective national standards. Generally speaking, the following heights must be observed:

- for sewage drains 50 mm
- for rainwater drains 100 mm

TIPP

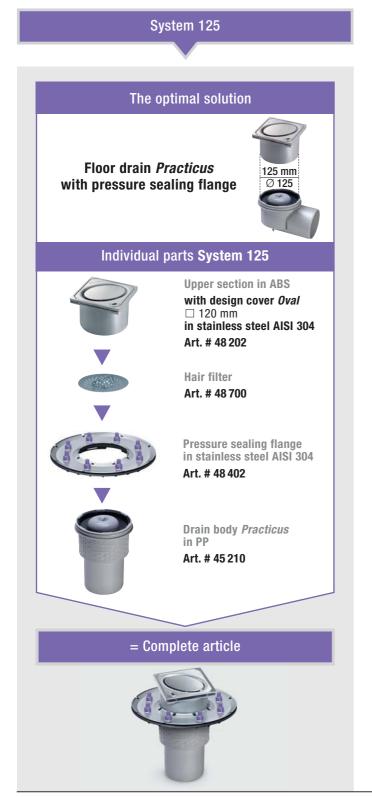

With *Multistop*, KESSEL offers a practical alternative to odour traps with seal water. While standard odour traps in drains frequently dry out due to air conditioning units, underfloor heating or infrequent use, *Multistop* prevents bad odours coming up from the drain without the use of water. A tight sealing flap forms a reliable seal. It only opens up when water makes contact to allow it to flow away without being restricted. After the water has passed, the flap closes. Rodents, foam and bad odors are retained. The water-free odour trap can be integrated in all KESSEL floor drains.

KESSEL - Modular Systems

KESSEL offers a large selection of fully complete bathroom drains and shower channels ready for installation. In the case that you have not found the exact drain to meet your requirements KESSEL offers our modular component system. This system allows you to choose the individual drain body, cover and accessory that you like and 'build your own' bathroom drain or shower channel.

Different drains for different applications

Every drainage project makes different demands on materials. In the public sector in particular, technical features such as flow rate, fire and sound protection or resistance to aggressive media play a major role. In the private sector on the other hand, the focus is more on the optical appearance. KESSEL supplies drains for all requirements and installation situations.

Project drains

Project drains are often used in industrial and public buildings. In most cases, drains are routed through the floor slab and require increased fire and sound protection. The specially developed project drains *Ecoguss* and *Practicus* are ideally suited to meet these requirements.

Bathroom drains, shower drains

Bathroom drains can be used in both, the private and commercial sector. Drains can be installed directly in a shower or in the general sanitary area. Surface water which occurs during cleaning work in toilets or changing rooms can be discharged easily via the drain.

Shower channels

Shower channels are installed in both private and commercial premises and reflect the desire for barrier-free bathroom design. Their wide intake area combined with high flow values guarantee that soiled water drains off well and evenly.

Drains for exterior installation

Wastewater which is collected outside also has to be discharged. There is a range of roof, balcony, parking deck, rain and yard drains available in different materials for this purpose. The load classes, which regulate the trafficability of the drain covers, must be taken into consideration.

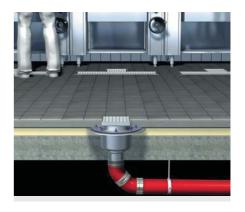

Wall drains

Wall drains are the latest trend in shower design. They are particularly suitable for barrier-free bathrooms since the unevenness which can occur through installation of a floor drain is no longer a problem. In addition, the Scada wall drain has four high quality drain covers made of stainless steel and optional LED lighting for a high degree of individual freedom in bathroom design.

Basement Drains

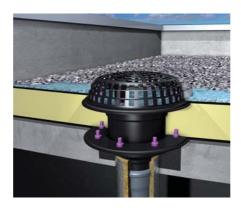

Basement drains are used for draining lower level components. They collect surface water and discharge this. In addition, further fixtures that require drainage such as washing machines, sinks or showers can also be connected.

Basement drains can be adapted to the requirements of your installation location and are available equipped with backwater valve, pump or volatile liquid trap.

Stainless steel drains and channels

Quality drains and channels in stainless steel for food processing operations or sanitary areas.

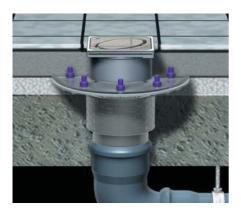

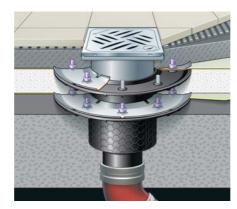

Waterproofing options

In rooms with a high moisture level, such as bathrooms, spas, washrooms or industrial kitchens in particular, high demands are made on waterproofing. The assumption that ceramic floors are watertight is often a mistake. The resulting decision to do without sealing measures frequently leads to unpredictable consequences such as, cracked joints, frost damage, mould formation or corrosion. For this reason, the EN 1253 standard requires a waterproofing seal to be installed under ceramic and natural stone floors in wet rooms.

Single waterproofing flange

Can be used as waterproofing in all wet and damp rooms.

The sealing strips used that are made of elastomer or synthetic materials and also bitumen sealing strips can be installed loosely, adhered with bitumen or attached using other hot polymer adhesive compounds.

Double waterproofing flanges

This can be used to seal against moisture in all wet and damp rooms.

The elastomer or polymer sealing sheets and bituminous sheeting can be laid loosely, be bonded with bitumen or other polymer hot glue materials.

The upper sealing level serves as a waterproofing layer against seeping water, the lower waterproofing layer protects the floor from moisture rising from below.

Shallow waterproofing flange

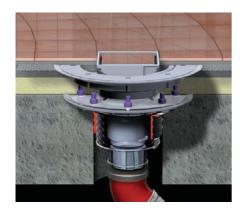

Can be used in wet rooms with non-pressurised water e.g. bathroom, shower, kitchen).

The manufacturers of chemical building products have come up with a safe and economic alternative to sub-screed seals - in the shape of special ready-to-use spreadable sealing materials. These sealing materials (e.g. PCI, Schomburg, Deitermann) form a flexible seal that is watertight and that can also bridge cracks. KESSEL supplies the Variofix shallow bed upper section as an optimum solution for very critical details when connecting drainage points in shallow bed constructions. Shallow bed upper section can also be used in combination with epoxy resin seals.

Draining wastewater professionally -Everything the specialist needs to know

SmartSelect makes planning quite simply quicker - visit smartselect.kessel.com for the configurator for alternative waterproofing options.

Shallow and lower waterproofing flange

Waterproofing flange

Used for waterproofing in all wet and damp rooms with seepage water and nonpressurised water from below.

The shallow bed gasket used is applied above the screed with special ready-to-use and spreadable sealing materials in compliance with the ZDB information sheet. This is governed uniformly in the building regulations of all German states. The consequence of this is that structural works, such as bathrooms. need to be protected from moisture penetration. Parts exposed to moisture are usually covered with tiles and slabs. Ceramic materials are resistant to moisture and are water-repellent but they are not waterproof. In this case they are water-permeable which means they require additional sealing.

The second seal must be positioned e.g. on the concrete slab. In this case, a lip seal is used. The lower seal level prevents moisture from rising. Professional installation must comply with the standard DIN 18195-4.

for impermeable concrete

In accordance with EN 206-1 and DIN 1045-2 constructional elements made of impermeable concrete. Impermeable concrete constructional elements are structures which are prepared without an additional outer laminar waterproofing layer and prevent water penetration solely on account of the concrete used and design measures such as joint sealing and crack width restriction. Impermeable concrete construction elements belong to the group of rigid waterproofing layers and adopt both the load-bearing and sealing function in one. Floor slab and outer walls are cast as concrete tanking with a high water penetration resistance in accordance with EN 206-1 and DIN 1045-2.

Waterproof flooring

Since the floor covering takes over the function of the sealing level in this case, the drain must have a watertight connection to the floor covering using a clamping flange. The clamping flange upper section can be combined with all the drain bodies suitable for the respective system.

Fire protection

Fire protection

Floor drains and barrier-free shower systems with non-combustible and combustible drain pipes installed in ceilings present a fire hazard, since the fire can spread to adjacent fire zones through the pipes. Construction measures are required here in particular in order to minimise the risk of any fire spreading.

The German State Building Code defines the required fire resistance period in classes as follows:

Fire resistance class	F30	F60	F90	F120
Fire resistance period (minutes)	> 30	> 60	> 90	> 120

All KESSEL drain systems with a fire protection feature comply with fire resistance class F120. There is no need for preventative fire protection for floor drains:

- in single- and two-family homes
- in basements

with horizontal outlets (under certain conditions).

How it works

KESSEL offers *Quick-Fit* and *Fire-Kit* for System 125 and for System 200 floor drains with vertical outlets:

Quick-Fit passage seal including fire protection, with approval Z-19.17-1719

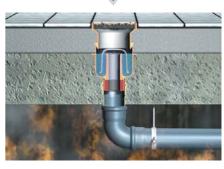

The fire-protection mass provides the necessary fire protection. This is attached by a metal hoop on the lower end of the installation aid. In the event of a fire, the fire protection mass swells up and closes the gap resulting from the melting seal. This guarantees a smoke-tight closure and stops the fire getting through.

- 1 Insert **Quick-Fit** in core hole (Ø 160 mm).
- ② Lower the *Ecoguss* (2) drain body with vertical outlet into *Quick-Fit*.
- 3 Fit the upper section.

Fire-Kit fire protection insert (certification no. Z-19.17-1719)

Fire burns away all exposed plastic pipe. The flames then reach the outlet of the drain body.

The odour trap built into the drain body combines with sealing water to prevent smoke and gas reaching upper levels of the building.

The Fire-Kit fire protection insert expands due to the heat and completely seals off the openings in the concrete floor, preventing fire from spreading to the floor above.

Sound protection / Maintenance and repairs

Sound protection

Oscillations are induced in a building structure via the contact points of a sanitary object with the building. The structure-borne sound is passed on and emitted from the ceilings and walls in the adjacent rooms as audible airborne sound. Particular care is taken during building planning to ensure noise annoyance caused by floor drains is kept to a minimum.

The Fraunhofer Institute in Stuttgart measured the following noise levels for KESSEL floor/ceiling drains:

Drains	DIN 4109	VDI 4100 SST III
Project drains Ecoguss Practicus	≥ 16 dB (A) ≥ 18 dB (A)	≥ 14 dB (A) ≥ 15 dB (A)
Bathroom drains "The Ultraflat"	≥ 12 dB (A)	≥ 10 dB (A)
Shower channels Linearis Comfort Linearis Compact	≥ 17 dB (A) ≥ 14 dB (A)	≥ 13 dB (A) ≥ 10 dB (A)
Scada wall drains	≥ 17 dB (A)	≥ 14 dB (A)

Maintenance and repairs in accordance with EN 12056

Installation is never the end of the story of course. Regular and thorough maintenance is a pre-condition for the permanent problem-free use of drains. This is one of the requirements in EN 12056 Part 1. During this test, the draining performance of the individual draining products also has to be observed. Malfunctions can be a sign of changes in the draining system which can then be diagnosed and eliminated in good time. The term malfunctions includes reduced draining performance, louder draining noises, odour traps being drained empty and odour pollution. Drains with removable odour traps have proved their worth in practice. Removal of the unit provides good access, allowing all the functional parts to be checked easily by means of a visual inspection.

Tipp: Many KESSEL drains have the integrated locking system *Lock & Lift.* This allows the cover to be opened easily for maintenance, removed and locked again safely. The cleaning time required is reduced by about 70 % compared with covers which are locked in the conventional manner using two screws.

INFORMATION

Do you require more detailed information? Our Service Centre will be happy to help.

You can find your personal KESSEL contact on page 3 of this catalog!

Complete System Solution

In addition to individual stainless steel drains and channels for kitchens or the food processing industry, KESSEL also offers complete separator packages consisting of separator, properly matched lifting station and advantageous accessories. All from one source - KESSEL.

- Lifting and pumping stations for free standing and underground installation see chapter 3 "lifting stations".
- Grease separators for free standing and underground installation see chapter 5 "separators".

Individual Solutions

Thanks to it's knowledge and possibilities, KESSEL is not only able to manufacture series products, but also special solutions in accordance with project-specific requirements.

Material selection, drains made of PP and ABS

Overview of resistance values

Drains are offered in a range of different materials. Which material is used depends on the requirements set by the type of wastewater to be discharged. Drains made of polymer are generally characterised by their high impact resistance, light weight and simple design.

	PP				ABS		
Medium	Concentration	Temperature in °C	Resistance	Medium	Concentration	Temperature in °C	Resistance
Acetone	100.00 %	23°	+	Acetone	technically pure	23°	-

Drains made of *Ecoguss*

Overview of resistance values

Building drains made of the composite material *Ecoguss* are naturally hygienic and highly resistant to chemicals on account of their smooth and corrosion-free surface. Additional protective coatings are not necessary. Weight approx. 70 % lower than cast iron drains, no electrical grounding necessary and suitable for installation in hot bitumen thanks to high-temperature resistance properties.

Ecogu	ISS		Ecog	uss

The right cover whatever the job

Load classes for drains, covers and upper sections

Drains, covers and upper sections must be properly selected so that they are able to handle the loads at the installation point. The two standards EN 1253-1 (building drains) and EN 124 (upper sections and covers for traffic areas) are applicable here. In cases of doubt, the higher class must always be chosen.

In accord	dance with EN 1253-1 – inside buildings	In accordance with EN 124 – outside buildings			
К 3	Class K 3 for max. load of 300 kg: Areas without traffic, such as in bathrooms at home, in nursing homes, hotels, schools, swimming baths, public washing and shower facilities, balconies, loggias, patios and green roofs.	A 15	Class A 15 for max. load of 1.5 tonnes: Areas that can only be used by pedestrians and cyclists.		
L 15	Class L 15 for max. load of 1.5 tonnes: Areas driven over by light traffic, without forklift trucks, in industrial buildings.	В 125	Class B 125 for max. load of 12.5 tonnes: Pavements, pedestrian areas and comparable areas, parking lots or multi-storey car parks.		
M 125	Class M 125 for max. load of 12.5 tonnes: Areas driven over by traffic, such as multi-storey car parks, factories and workshops.	C 250	Class C 250 for max. load of 25 tonnes: Upper sections in the gutter area which, measured from the edge of the kerb, extended up to max. 0.5 m into the road and max. 0.5 m onto the pavement.		
		D 400	Class D 400 for max. load of 40 tonnes: Road surfaces (including pedestrian areas), hard shoulders and parking areas which are approved for use by all types of road vehicles.

SmartSelect makes planning quite simply quicker - visit **smartselect.kessel.com** for the configurator for alternative waterproofing options.

Ecoguss is the future — the days of cast iron are over

Ecoguss the new metallic composite material. Drains made from **Ecoguss** combine all the advantages of polymer drains, such as low weight and no corrosion, with the advantages of cast iron drains such as sound insulation and heat resistance.

Floor drains *Ecoguss*

The economic alternative to cast iron drains

FIRE PROTECTION

Fire and smoke protection insert *Fire-Kit* and *Quick-Fit* passage seal with fire protection with approval Z-19.17-1719: *Ecoguss* drains with a vertical outlet can be equipped with the fire protection insert *Fire-Kit*,

which is compliant with the highest fire resistance class R 120. Only use *Fire-Kit* in combination with an odour trap.

SOUND PROTECTION

Measurements carried out by the Fraunhofer Institute in Stuttgart: *Ecoguss* floor/ceiling drain

- ≥ 16 dB(A) according to DIN 4109
- ≥ 14 dB(A) according to VDI 4100 SST III

HYGIENE

Self-cleaning effect due to permanent non-corrosive and smooth surface.

ASSEMBLY

Ecoguss drains are three times lighter than cast iron despite being just as sturdy, thus making transport and installation much easier. There is no longer any need for complex electrical grounding. The drain body requires a core hole with a diameter of only 160 mm.

Floor drains Practicus in PP

Self-cleaning effect thanks to corrosion-free and smooth surface

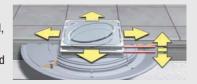

INSTALLATION AID

Cheaper and faster installation for drains with vertical outlet: *Quick-Fit* passage seal for core holes with a diameter of only 160 mm (around 2/3 cost saving). Additional sound decoupling and smoke-tight closure with the version with fire protection with approval Z-19.17-1719.

VARIABLE

Variable upper sections can be twisted, tilted, height-adjusted. In the case of shallow bed upper sections, the covers can also be moved for adaptation to the tile pattern.

PERFECT CONNECTION

Honeycomb structure for perfect integration and stability in concrete.

Ecoguss Art. # 48 811.63 CONNECTION

Connection to SML pipe in \varnothing 58, 78, 110 and NEW: \varnothing 83.

MODULAR DESIGN

Individual drain composition using the KESSEL modular system.

INSTALLATION EXAMPLE Ecoguss

Project drains Ecoguss and Practicus

Design the drain you need yourself using our practical matrix order system.

- 1 Select the drain body, lateral or vertical outlet and the diameter...
- Select the matching upper section ...
- The Article # for the matching drain is stated in the respective section.

For other product combinations and accessories, see the modular system at page 160 - 161

The bathroom drain collection System 125

The bathroom drains "The Vertical" and "The Ultraflat" are ideal for renovating existing buildings and have numerous advantages thanks to the range of waterproofing layer types for all floor structures.

New: drains with shallow bed upper sections and upper sections with covers made of AISI 316L stainless steel for aggressive media.

Bathroom drain "The Vertical"

compact drain body with vertical outlet makes it ideal for renovations

INSTALLATION of "The Ultraflat" bathroom drain

EXTREMELY LOW HEIGHT

Overall installation height with flange including cover 69 mm, up to top edge of flange only 54 mm.

CAN BE SHORTENED

Upper sections can be shortened up to a minimum installation height.

SHALLOW BED WATERPROOFING LAYER

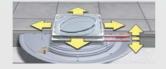

Including mesh fabric for shallow bed waterproofing layer on site.

Bathroom drains "The Ultraflat" minimum installation height, ideal for renovation work

"The Ultraflat" Art. # 45 750.20

VARIABLE

Variable upper sections can be twisted, tilted, height-adjusted. In the case of shallow bed upper sections, the covers can also be moved for matching to the tile pattern.

For discharging water that has seeped into the floor

Multistop

Ideal odour trap for drains that dry out frequently. Can be retrofitted to installed drains.

Installation example "The Ultraflat"

Bathroom drains

System 125

- (1) "The Ultraflat" bathroom drain
- (2) Mesh fabric

- (3) Drain pipe
- (4) Cover

Thanks to its minimum overall installation height, "The Ultraflat" bathroom drain is particularly suitable for flush-to-floor showers, which are one of the latest trends. Body and upper section together are only 69 millimetres high and are thus also suitable for retrofitting. Connection to the shallow bed waterproofing layer is by means of a mesh fabric on the drain flange. The wastewater collected is routed to the drain pipe via the arnothing 40 or 50 outlets. The drain looks impressive too: "The Ultraflat" can be combined with any of the System 125 upper sections - tilable, slotted cover or one of the award-winning design covers.

Professional advantages

- Minimum installation height 69 mm ideal for renovation work in existing buildings
- Also suitable for flush-to-floor showers thanks to the high draining capacity of up to 1 litre per second.
- With removable odour trap full access for maintenance and cleaning
- With slotted cover made of AISI 304 stainless steel - timeless design combined with durable material.
- Flexible modular system with a large number of design covers (see page 168 - 169).
- Multistop accessory ideal odour, foam and rodent protection for drains that dry out frequently.
- Variable upper section rotatable, tiltable and height adjustable
- Select, plan and visualize your own personalized KESSEL Design shower drainage system using the KESSEL Shower Drain Configurator at

Installation example "The Vertical"

- ① "The Vertical" bathroom drain
- 2 Outlet
- (3) Adhesive flange

- 4 Pressure sealing flange
- (5) Cover

Thanks to its compact body, "The Vertical" bathroom drain is particularly suitable for renovation work. It has a vertical outlet \emptyset 40 mm which can be cut off and widened to \emptyset 50 mm. The upper sealing level serves as a waterproofing layer against seeping water and is connected by means of an adhesive flange for example. The lower waterproofing layer against water load is connected by means of a pressure sealing flange. The cover is a slotted stainless steel cover - but "The Vertical" drain can also be combined with any other upper section from the System 125 range.

Professional advantages

- Compact drain body ideal for renovation work.
- Also suitable for flush-to-floor showers thanks to the **high draining** capacity of up to 1 litre per second.
- With removable odour trap full access for maintenance and cleaning
- With slotted cover made of AISI 304 stainless steel - timeless design combined with durable material.
- Multistop accessory ideal odour, foam and rodent protection for drains that dry out frequently.
- Flexible modular system with a large number of design covers (see page 168 - 169).

SmartSelect makes planning quite simply quicker - visit **smartselect.kessel.com** for the configurator for alternative waterproofing options.

Installation example *Giro*

The *Giro* bathroom drain has an inlet at the side which can be turned through 360 degrees and can thus be used flexibly during drainage planning. It also has a flexible outlet with sound decoupling which has a diameter of 50 mm.

Professional advantages

- Variable upper section rotatable, tiltable and height adjustable
- Flexible outlet with sound absorption
- Sound-absorbing
- With removable odour trap full access for maintenance and cleaning
- Sealing system safe to install
 The fixed lip seal reliably prevents the upper section from slipping
- Select, plan and visualize your own personalized KESSEL Design shower drainage system using the KESSEL Shower Drain Configurator at

Installation example "The Superflat"

- ① "The Superflat" bathroom drain
- 2 Outlet
- 3 Inlet

- 4 Adhesive flange
- (5) Cover

With its installation height of only 95 mm "The Superflat" bathroom drain is ideally suitable for both new buildings and renovation work. It has a flexible horizontal outlet \varnothing 50 mm with sound decoupling and a lateral inlet \varnothing 40 mm for the connection of other draining objects. There is an adhesive flange available as an option for humidity sealing. The cover is a slotted stainless steel cover - but "The Superflat" drain can also be combined with any other upper section from the System 100 range.

Professional advantages

- Variable upper section rotatable, tiltable and height adjustable
- Minimum installation height
- Flexible outlet with sound absorption
- With removable odour trap full access for maintenance and cleaning
- Versions with single or triple inlets.
- Flexible modular system with a large number of design covers (see page 176 - 177).
- Sealing system safe to install
 The fixed lip seal reliably prevents the upper section from slipping

Shower channels Linearis

Linearis shower channels for flush-to-floor installation are leading the modern bathroom design trends. Multiple channel inserts are available including stainless steel, wood-optic for a calm and warm ambience and LED induction technology backlighting.

Variety of different installation options for an individual bathroom design

Shower channels Linearis Comfort

COMPLETE SHOWER CHANNEL

Ready-to-install complete shower channels with fix mounted drain body with lateral outlet, minimum overall installation height 93 mm. Flange installation height only 86 mm.

LENGTHS

Five channel lengths: 750, 850, 950, 1050 and 1150 mm.

SOUND PROTECTION

Measurements carried out by the Fraunhofer Institute in Stuttgart: shower channel *Linearis Comfort*

- \geq 17 dB(A) according to DIN 4109
- ≥ 13 dB(A) according to VDI 4100 SST III

INDIVIDUAL

Attractive design covers also available with LED backlighting technology. Stainless steel cover can be turned over and tiled to offer an "invisible" look.

2 Drain body

③ Installation supports

The Linearis Comfort shower channel effortlessly combines engineering and design to offer new and creative design concepts for your bathroom. The reversible channel cover can be displayed in the classic stainless steel look or reversed to show the invisible tiled look, also available are custom channel inserts such as wood optic and illuminated versions. The channels are readyto-install with their welded on drain body, including an odour trap and \varnothing 50 outlet. Linearis Comfort can be installed on the room or wall side of the shower. The flexible installation supports are height-adjustable and can be pivoted away as required for wall-side installation.

Professional advantages

- Stainless steel cover is reversible and tileable
- Vertically adjustable frame Stainless steel channel and rim can be adjusted from 7-22 mm to meet on site tile/granite/marble thicknesses.
- Installation on room or wall side of shower Feet can be pivoted away as required for wall-side installation.
- **Exemplary hygiene** smooth, easy-clean surface, self-cleaning effect
- Channel length: 750 mm, 850 mm, 950 mm, 1050 mm, 1150 mm.
- Channel locking mechanism as standard
- Flexible modular system with a large number of design covers.
- Hair filter and *Multistop* odour, foam, rodent and insect stop (optional)
- 1.1 l/sec flow rate with 10 mm threshold.
- Select, plan and visualize your own personalized KESSEL Design shower drainage system using the KESSEL Shower Drain Configurator at

Installation example Linearis Compact

Shower channels in a classic, timeless design. Minimalistic impression fits elegantly in a purist bathroom design. The finely finished channel surface in stainless steel can be reversed to offer a recessed side where the bathroom tile or natural stone surface can be installed. The channels are ready-to-install with their welded on drain body, including an odour trap and \emptyset 50 outlet. Linearis Compact can be installed on the room or wall side of the shower. The flexible installation supports can be shortened for wall-side installation.

Professional advantages

- Stainless steel cover is reversible and tileable
- Installation in the room or on the wall The length of the feet can be shortened on the left or right if mounted to the wall.
- Hygienic design single piece body and channel cover
- **Channel length:** 300 mm, 450 mm, 550 mm, 650 mm, 750 mm, 850 mm, 950 mm, 1050 mm, 1150 mm.
- Flow rate with counter slope up to 0.6 l/sec with 10 mm threshold. Flow rate increased to 0.9 l/sec with use of Multistop odour trap.
- Cover and rim made of stainless steel.
- Multistop (optional) odour, foam, rodent and insect stop
- Hair filter (optional)

- 1 Access cover
- ② Stainless steel channel

The *Linearis Super60* shower channels offers a very high flow rate of 72 liters per minute making it perfect for use in higher flow applications. The *Linearis Super60* also allows full service access to the odor trap and drain body via the removable channel and access cover for cleaning and maintenance purposes. The attractive stainless steel channel can also be reversed revealing a recessed area which can be tiled to also offer the "invisible" tiled look. One channel with your choice of two styles - stainless or invisible.

Professional advantages

- Wide channel with high flow rate from 1.1 - 1.2 l/sec
- Easy cleaning
 Access cover for easy cleaning
 and maintenance
- Channel cover can be reversed and tiled on site
- **Channel length:** 750 mm, 850 mm, 950 mm, 1150 mm
- Also suitable for installation on door side
- Flexible modular system with a large number of components.

Wall drains

Wall drains Scada

New trends for sophisticated bathroom drainage systems

Page 194 - 198

Creative shower drains without barriers

Completely new design options in barrier-free bathrooms - ideal for new buildings and renovation work. There is a choice of four different drain covers all made of stainless steel: two are in a smooth finish for different tile thicknesses, one is an almost invisible cover which can be tiled over, and the fourth is in a three-dimensional wave-look design. The drain covers are also offered with LED backlighting.

OPTIMISED IN DESIGN AND FUNCTION

AWARD-WINNING DESIGN Choice of four drain covers.

ONLY FROM KESSEL

Version with LED lights for a special atmosphere

With automatic colour changing or selection option of specific light colour.

12 Volt low-voltage technology and included cable conduit pipe. Factory made conduit connection to drain body.

MULTIPLE OUTLETS

Maximum flexibility when fitting one of three selectable drain connection options. Thus problem-free laying of underfloor heating.

PERFECT ADJUSTMENT

Vertically adjustable installation feet provide easy on-site height setting from 80 to 215 mm (from sub-floor to top of tiles). Lateral adjustment from wall from 100 to 180 mm for drywall or brick and mortar walls.

Wall drain **Scada** for brick- and dry-wall

Wall drain **Scada** with installation board

Brick- and dry-wall INSTALLATION

FOR DRY-WALL

Dry-wall mount (installation without board), makes the flush connection to drywalling boards easier.

INSTALLATION board and wedge

- (1) Installation board with pre-mounted and sealed *Scada* wall drain completely installed, with slope on 3 sides.

 Installation board 900 mm: A = 900 mm, B = 200 mm Installation board 1200 mm: A = 1200 mm, B = 200 mm
- ② Wedge as shower board with integrated 3-sided slope. Optionally available in two sizes:
 - \square 900 x 900 mm \square 1200 x 1200 mm

INSTALLATION EVEN EASIER!

Now with new adjustable cover - can be adjusted horizontally up to 3 mm and vertically up to 4 mm

ONLY 65 MILLIMETRES

Smallest installation height up to flange 65 mm.

SOUND PROTECTION

Measurements carried out by the Fraunhofer Institute in Stuttgart:

wall drain Scada

- \geq 17 dB(A) according to DIN 4109
- ≥ 14 dB(A) according to VDI 4100 SST III

Basement drains

Basement drains

Page **200 - 208**

with or without backwater flap or pump

Volatile liquid traps (heating oil stops)

Page **205**

must be used wherever volatile liquids can escape unexpectedly.

The basement drain that pumps against backwater

Pumpfix S 28 451

Backwater pumping station *Pumpfix S*Basement drain with twin flap backwater valve and pump

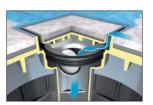

INSTALLATION Pumpfix S IDEAL FOR NEW BUILDINGS

INSTALLATION

Telescopic upper section with shallow waterproofing flange, recessed cover for on-site tiling and integrated drain function.

ADDITIONAL SAFETY

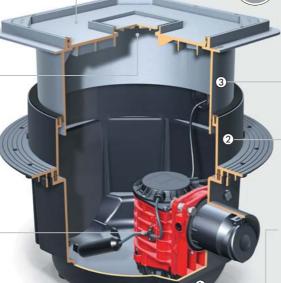

Odour, foam, rodent and insect stop *Multistop* available as accessory.

TECHNOLOGY

Pump with twin flap backwater valve and odour trap. Tool-free pump removal.

Not to be used as a lifting station!

FLEXIBLE INSTALLATION New extension section with central

flange, counter-flange and elastomer waterproofing sheet optional - as protection against water load for installation in waterproof concrete.

CONNECTIONS

Connection of optional inlets to drain body 1 of \varnothing 110, above the compression flange 2 and in the extension section 3 up to \varnothing 75 mm.

The innovative and backwater-safe basement drain for both new buildings and renovation work.

During normal operation, soiled water from sinks, washing machine, shower etc. runs into the sewage system without power consumption. If backwater occurs in the sewer, the pump automatically switches on via a float control. Penetrating surface water is also pumped to the sewer.

Basement drains "The Universal" / Drehfix Basement drains with backwater flaps

Basement drains with effective backwater protection

FLEXIBLE INSTALLATION

Telescopic upper section can be twisted, tilted, height-adjusted.

INSTALLATION "The Universal" IDEAL FOR RENOVATION WORK

Installation in waterproof concrete with extension section with pressure sealing flange and waterproof sheet optional. Also suitable for alternative waterproofing layer.

Three fixed inlets as standard $2 \times \emptyset$ 50 and $1 \times \emptyset$ 75.

Maintenance and cleaning without tools.

INSTALLATION Drehfix IDEAL FOR RENOVATION WORK

Minimum installation height with only 30 mm overlap.

FLEXIBLE INSTALLATION

Deeper installation up to 180 mm optional.

STRAIGHTFORWARD **MAINTENANCE**

Maintenance and cleaning without tools.

Secure drains thanks to integrated twin flap backwater valves.

"The Universal" model is a versatile basement drain with variable connection options thanks to three inlets. The compact design of the **Drehfix** basement drain makes it popular for renovating older buildings. It fits into the recesses of old cast drains thanks to its small design height.

Installation area 700 x 700 mm

with / without twin flap backwater valve

1.8 l/sec flow rate Installation area 320 x 190 mm	According to EN 13564 Type 5.		

Installation example **Pumpfix S**

Pumpfix S ① is a basement drain for wastewater without sewage with gravity drainage to the sewer. Further inlets ② such as shower or washing machine can be connected to the drain installed in the concrete slab. Any surface water is drained through the cover ③ and discharged. In the event of backwater, the pump activates and pumps the building's wastewater into the flooded sewer ④.

Professional advantages

- Vertically adjustable upper section for stepless installation in concrete slabs:
 Rotatable, tiltable, vertically adjustable
- Installation in waterproof concrete.
 Gasket set to prevent groundwater infiltration.
- Elegant optical appearance due to recessed cover for on-site tiling
- Perfect for drainage of outdoor basement access steps with additional inlet connections
- Wastewater discharging even during backwater

Installation example "The Universal"

"The Universal" is a versatile basement drain ① with a choice of two \emptyset 50 mm inlets and one \emptyset 75 mm ② inlet to protect individual drains against backwater from the sewer. Cover made of plastic or stainless steel ③.

Professional advantages

- Installation in waterproof concrete.
 Gasket set to prevent groundwater infiltration.
- Alternative seal with shallow bed upper section Art. # 48 968.
- Hand-lockable emergency closure
- Tool-free maintenance: Fast and simple cleaning with one-hand quick-release fastener.
- Vertically adjustable upper section for stepless installation in concrete slabs:
 Rotatable, tiltable, vertically adjustable
- Three lateral inlets
 Three lateral inlets (2 x Ø 50 and 1 x Ø 75)
 are attached as standard.

Installation example **Drehfix**

The *Drehfix* is a compact basement drain ① for protecting individual drains against backwater from the sewer. Thanks to its small design height, *Drehfix* fits into the recess of old cast drains. It provides possibilities for two further inlets ②.

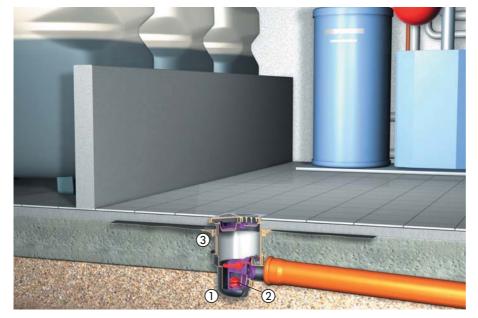

Professional advantages

- With twin flap backwater valve and odour trap
- Hand-lockable emergency closure (Visual control without removing the cover).
- Stepless installation with extension section Art. # 38 670.
- Tool-free maintenance.
 Fast and simple cleaning with one-hand quick-release fastener.
- Height adjustable upper section

Installation example volatile liquid traps

Volatile liquid traps ① are the ideal drain for the boiler room in the basement. They use an integrated floater ② to guarantee reliable retention of volatile liquids escaping from heating systems and backwater flaps to prevent wastewater penetration from the sewage system. There is a special upper section 3 with extension available as an accessory for installation in waterproof concrete.

Professional advantages

- **Easy installation** with adjustable upper section (vertically and laterally adjustable)
- Sealing gasket between extension section and flange - Article # 27 298 (prevents floor moisture damage)
- Waterproofing seal Article # 48 968
- Cast iron cover handles higher loads up to 12.5 tons (load class B) -Article # 48 985
- Upgradable to twin flap backwater valve
- Quick and easy cleaning with one-hand locking clasp

Top-quality drains / channels made of stainless steel

The stainless steel AISI 304 (or AISI 316L on request) complies fully with the requirements for food-processing plants and guarantees perfect functional use. Our grate covers are compliant with DIN 1253-1.

Floor drains

for all types of sealing gaskets

FLOOR DRAINS

made of stainless steel AISI 304

INDIVIDUAL

Comprehensive range of drains for all draining requirements can be combined to meet individual requirements.

CONNECTIONS

Outlets for SML pipe connection.

HYGIENE

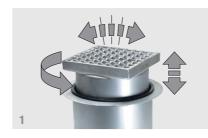

Easy maintenance and care thanks to removable odour trap in the installed state.

INSTALLATION

Easy installation thanks to variable upper sections which can be turned, tilted and height-adjusted (Fig. 1).

ACCESSORIES

Practical accessories with approval Z-19.17-1719: fire and flue gas insert *Fire-Kit* System 125 or 200 and *Quick-Fit* passage seal with or without fire protection (Fig. 2). Only for System 125 drain body with vertical outlet.

made of stainless steel AISI 304

VARIANTS

Complete channels with outlet socket as *Express* version (Fig. 3), channel profiles with adhesive edge for shallow bed waterproofing layers or as a version in a modular system for the customised combination of individual elements.

All slotted grills made of stainless steel, non-slip, class L 15 (Fig. 4).

DRAIN BODY

Suitable *Ecoguss*, *Practicus* or *Ferrofix* drain bodies available as optional accessories.

STABLE

With adjustable feet for height levelling.

ACCESSORIES

Practical accessories with approval Z-19.17-1719: fire and flue gas insert *Fire-Kit* System 125 or 200 and *Quick-Fit* passage seal with or without fire protection (Fig. 2). Only for System 125 drain body with vertical outlet.

CHANNEL DRAINS / SLOTTED CHANNELS

made of stainless steel AISI 304

INDIVIDUAL

Modular system for the customised combination of individual elements. There is always a choice of three channel profiles: U-profile, adhesive edge for shallow bed waterproofing layers (Fig. 4) and tile connection bracket (not for shallow bed waterproofing layers). Large selection of grating and covers (Fig. 5).

DRAIN BODY

Suitable *Ecoguss*, *Practicus* or *Ferrofix* drain bodies available as optional accessories.

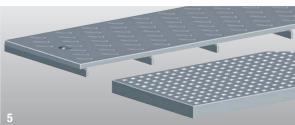

STABLE

With adjustable feet for height levelling.

ACCESSORIES

Practical accessories with approval Z-19.17-1719: fire and flue gas insert *Fire-Kit* System 125 or 200 and *Quick-Fit* passage seal with or without fire protection (Fig. 2). Only for System 125 drain body with vertical outlet.

Drains Ferrofix in stainless steel AISI 304

Low profile floor surface applications 15 mm*

When planning renovations, specialists often face the problem of using products in very shallow floor structures that still meet the sealing requirements.

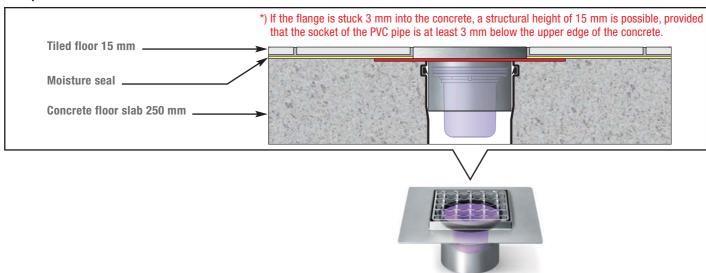

As a customer, describe your installation situation and we will make a *Ferrofix* - that is precisely tailored to your requirements.

A wide range of customised solutions are possible using the KESSEL *Ferrofix* stainless steel drains:

- ☐ Floor structures up to a minimum height of 15 mm are possible, even with an adhesive edge for the compound seal
- Materials in various variants can be selected
- □ Choice of cover forms and sizes

Example:

Stainless steel quick access closable drain cover - hygienic

Custom Ferrofix System 125 drain cover manufactured from 1.4301 (AISI 304) stainless steel.
50 mm wide, 3 mm thick perimeter connection flange Center finger access removal hole (photo 1)
Quick release / quick closure pop up drain plug (photo 2)

Ecoguss the new hightech material

Heavy-duty drains for surface water drainage of car parks, industrial buildings, roofs and driveway / parking areas.

With pressure sealing flange for twin sealing

Single piece pipe connection drain

Parking deck drains

for car parks and industrial buildings

SYSTEM ADVANTAGES / INSTALLATION

Parking deck drains in *Ecoguss*

VARIABLE

Variable upper section rotatable, tiltable and height adjustable for adaption to the ground level.

STRAIGHTFORWARD INSTALLATION

Fast and easy installation due to low weight of drain.

HIGH SHATTER RESISTANCE

Parking deck drains carry Class B rating (12.5 ton loads).

CORROSION FREE Corrosion free material. Electrical grounding no

longer necessary.

Fire-Kit

Fire and smoke protection *Fire-Kit* with approval Z-19.17-1719. Optional for drain bodies with vertical outlet.

Quick-Fit

Quick-Fit the all-round seal for core drillings with approval Z-19.17-1719 with or without fire protection for cheap and fast installation.

With *Ecoguss* upper section

Single piece *Ecoguss* pipe connection drain

Polymer gutter drains

Ecoguss roof drains

Polymer roof drains

Yard and gutter drains

for yard and downspouts drainage

Flat roof drains

for small and medium roof areas

SYSTEM ADVANTAGES / INSTALLATION

Yard and gutter drains in *Ecoguss* / polymer

VARIABLE

Variable upper section rotatable, tiltable and height adjustable up to 110 mm (yard drain with upper section made of *Ecoguss* or completely made of polymer).

Single piece pipe connection

drain with round or square

support rim.

LOCKING AND REMOVAL KEY

Locking and removal key for *Ecoguss* drain covers with *Lock & Lift* System.

SYSTEM ADVANTAGES / INSTALLATION

1. Yard and gutter drains in *Ecoguss*

RELIABILITY

With twin sealing system for waterproof concrete and integrated heating.

MATERIAL

High temperature-resistant materials for processing with hot bitumen acc. to DIN 18195.

EASY INSTALLATION

Easy installation also upgradable after installation to emergency drainage option

2. Polymer roof drains

COMPACT

Ideal for smaller roof areas, with pressure sealing flange, also available with twin gasket system.

Installation example parking deck drains Ecoguss

- 1 Upper section
- 2 Sealing flange

③ Connection to SML-pipe

The KESSEL *Ecoguss* drains are especially suitable for installation in garages and car parks. The high strength low weight body and upper section handles traffic loads up to 12.5 metric tons and a stainless steel waterproof sealing flange is available if required. The compact drain bodies are available with various outlet sizes which are designed for connection directly to SML cast iron drainage piping.

No-compromise fire protection

Floor drains are critical when it comes to spreading of fire in a building. *Ecoguss* drains combined with KESSEL fire protection elements meet all the requirements for fire resistance class R 120.

■ The determining factor is the fire resistance class, not the building material class!

The *Ecoguss* drains with vertical outlets are designed specifically for use with the KESSEL *Fire-Kit* fire protection insert which offers the highest fire resistance class - R 120. As soon as fire enters the lower portion of the *Ecoguss* drain, the Fire-Kit expands and completely seals the opening to prevent fire and smoke from reaching the above floor.

Quick-Fit passage seal including fire protection ring for fire resistance class R 120.

Additional security for fire protection is offered by the KESSEL *Quick-Fit* passage seal including fire protection ring. If floor drains are not poured into the concrete floor but inserted later into cored holes in the concrete slab, the space between the cored hole and the exterior of the drain body also needs to be secured against fire. In the case of a

fire, the fire protection ring expands and completely seals the opening between the exterior of the drain body and the cored hole - preventing fire and smoke from reaching the above floor.

Professional advantages

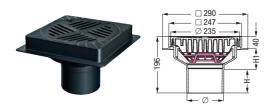

- Metallic composite material
 Metallic properties but still non corrosive
 and non-conductive (no electrical
 grounding necessary!)
- Honeycomb structure for perfect concrete bonding
- High temperature-resistant materials Briefly up to 400°C, for processing with hot bitumen acc. to DIN 18195
- With SML pipe connection Connection to SML pipe according to EN 877 in Ø 58, 78, 110 and Ø 83! No transition pieces any more!
- Sound insulation
 - · Sound-absorbent material
 - For increased sound insulation to DIN 4109 < 30 dB (A)
- Variable upper section rotatable, tiltable and height adjustable
- Chemical resistance
 Extremely high acid/alkali resistance
 for chemically-polluted wastewater.
- High discharge rates
- With Lock & Lift System
- Thermal insulation insert available ready to install
- High shatter resistance and high load resistance
 Parking deck drains carry class B rating (12.5 ton loads).

Drains

Yard drains in *Ecoguss /* polymer System 200 / 100

Installation example yard drains System 200

- (1) Upper section and cover
- ② Odour trap (Art. # 27 171)

Ecoguss yard drains assure an efficient surface water drainage of outdoor areas. Included is the upper section and cover which handles vehicle traffic loads up to 12.5 metric tons. An optional odour trap can be used to keep unpleasant sewer odours where they belong.

Professional advantages

- Vertically adjustable upper section for stepless installation in concrete slabs: rotatable, tiltable and vertically adjustable up to 110 mm
- Deeper installation and lateral inlet requirement. In one step the quick and easy solution. With extension section Art. # 67 500 and extension Art. # 67 600 with Ø 110 lateral inlet.
- Frost free installation depth up to 1020 mm with extension section Art. # 67 500.
- Locking and removal key for Ecoguss drain covers with Lock & Lift System. Art. # 67 007.

Installation example yard drains System 100

- 1 Upper section and cover
- 2 Concrete

- 3 Sludge basket
- 4 Locking system

Ecoguss yard drains assure an efficient surface water drainage of outdoor areas. Included is the upper section and cover which handles vehicle traffic loads up to 12.5 metric tons. In the case that upper section and cover are used alone (without being connected to a drain body) it is important that voids are properly filled with concrete to provide the required support. The integrated sludge basket is easily accessible for cleaning via the Lock & Lift cover removal and locking system.

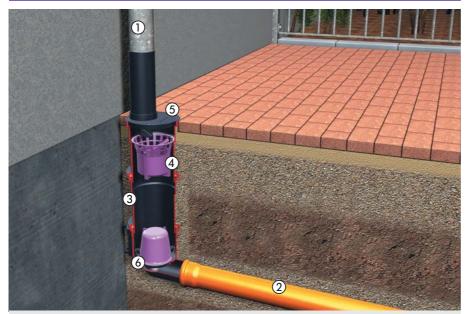

Professional advantages

- Multistop as an odour, foam, rodent and insect protection (Art. # 48 500) available as accessory.
- Locking and removal key for *Ecoguss* drain covers with *Lock & Lift* System Art. # 67 007.
- Compact and low weight alternative to cast iron drains
- Single piece pipe connection drain
- With sludge trap

Gutter drains made of polymer System 200

Installation example gutter drains System 200

- 1 Downspouts
- 2 Drainage pipe
- 3 Extension section

- 4 Sludge basket
- ⑤ Drain cover
- 6 Odour trap

Rainwater and gutter drains transfer rainwater from downspouts from buildings into underground drainage piping. Light weight, corrosion free material and solid construction of the polymer material represent a clear alternative to standard concrete drains. Extension sections are available if a deeper installation is required to reach frost free zones. To prevent debris from entering the sewer a sludge basket is included with the system. Removal of the sludge basket for cleaning purposes is quick and simple. In addition, an optional odour trap is available to prevent sewer gases from escaping through the drain.

Professional advantages

 Optimal pipe access with sludge trap removal

- Lateral Ø 110 inlet possible with use of extension section Art. # 67 600.
- Convenient wall mount system

Yard drains in polyethylene System 400

Installation example yard drains System 400

- 1) System 400 drain
- ② Sludge basket

System 400 drains assure an efficient surface water drainage of outdoor areas and with their low weight, corrosion free material and solid construction they represent a clear alternative to standard concrete drains. System 400 drains are available with load class B or D covers meaning they can be used in all traffic areas up to 40.0 metric tons. Extensions sections are available if a deeper installation is required to reach frost free zones. To prevent debris from entering the sewer a sludge basket is included with the system. In addition, an optional odour trap is available to prevent sewer gases from escaping through the drain.

Professional advantages

- Variable upper section rotatable, inclinable and height adjustable
- Side inlets up to a nominal width of Ø 160 via drilling on the side, can be connected very easily and quickly.
- Optimum cleaning of the pipes by removing the odour trap/sludge trap
- Can be adapted to the level of the floor
- Fuel resistant
- Can bear lorries weighing up to 40 ton.

Installation example **Ecoguss** roof drains

Flat roof drains made of *Ecoguss* are available in the diameters \varnothing 75, \varnothing 110 and \varnothing 125 mm. In addition to a practical leaf trap (basket) to prevent blockages, flat roof drains are also available as an option in heated versions to allow proper function during winter.

Professional advantages

- Ecoguss the new high-tech material
- High flow performance exceeds regulatory norm requirements
- High temperature resistant material making it ideal for use with hot asphalt / bituminous waterproof membrane installations
- Easy installation also upgradable after installation to emergency drainage option
- Full selection of accessories to meet all installation requirements
- Drain body available in Ø 75,Ø 110 and Ø 125
- Lock & Lift System no tools required
- With integrated heating low energy consumption
- Multistop 200 as an odour, foam, rodent and insect stop. Waterless odour trap.

Individual Solutions Page 298

Grease separators

Water is one of our most precious resources and is not available in unlimited quantities. For this reason, contaminated wastewater from kitchens must be pretreated and cleaned with the aid of appropriate separator systems before it is discharged to the public sewer system.

KESSEL offers a wide range of innovative polymer separators for different areas of application and wastewater quantities:

Grease separators

Grease separators for free-standing installation

Grease separators for disposal via a disposal truck (full disposal) are used wherever medium to large quantities of grease occur. The entire tank contents are emptied at regular intervals.

Grease separators

for underground installation

If indoor space is limited, the grease separator system must be installed outside the building.

Individual Solutions

Thanks to the knowledge and possibilities in the field of polyethylene technology KESSEL is not only able to manufacture series products, but also special solutions in terms of size, shape and features in accordance with project-specific requirements.

Reasons for installing a grease separation system

Operations from small restaurants to large scale food processing plants disposing fats, oils and grease (FOGs) into public wastewater drainage systems are becoming an increasing concern to industry, government and environmental agencies.

Wastewater travels a long distance from its original source to the wastewater treatment facilities. During this time large amounts of grease and food wastes build up in the drainage pipe systems leading to operational and public effects:

...Operational effects

One of the most severe drainage problems in food processing facilities is the build up of grease layers within the drainage system leading to negative effects, such as increased odour emissions, reduced efficiency of the drainage system, additional maintenance costs, pipe blockage or even potential flooding.

Avoiding a pipe blockage

Prevention of corrosion and odour build-up

...Public effects

FOGs also affect public wastewater streams by causing sewer blockage and reducing the efficiency of public sewage plants. This leads to additional costs for maintenance and repair.

Effects on wastewater treatment facilities

For a clean environment

When to use a grease separator?

Grease separators should be installed in all locations where greases and oils from plant or animal origin are required to be removed from the wastewater stream. This applies to commercial and industrial applications, for example:

- Butchers, meat and sausage factories
- Pre-prepared meal production
- Slaughterhouses and meat preparation facilities
- Soap / stearin production plants
- Restaurants and fast food shops
- Fish production facilities
- Cooking oil refineries, butter / margarine production
- Frying facilities / nut roasting factories
- Cafeterias in commercial buildings, hospitals, universities, military bases and government agencies

Polyethylene grease separators – The long term solution

... Easy transport

Their low weight allows our grease separators to be transported easily by hand on site. A special base design also allows them to be transported by forklift truck.

...Simple and fast installation

With EasyClean: The curved shape of the one-piece tank makes it ideal for retrofitting purposes, even where space is tight through narrow staircases and doorways for example.

...Fracture resistance

The polyethylene material ensures a high impact strength. This means that soil movements can easily be compensated for where installation is in the ground.

...Resistant to aggressive grease

The polyethylene material used is 100 % resistant to aggressive grease. This guarantees a long service life since there is no damage to the material due to corrosion.

Separator function based on EN 1825

The KESSEL Euro separator based on Euro-Norm EN 1825 (as seen in the illustration below) consists of a grease separation chamber with an integrated sludge trap located at the bottom. Following the separator is a sampling chamber. Wastewater containing fats, oils and grease (FOG) is guided into the separator by a pacifying pipe which allows the wastewater to be slowly and evenly distributed into the separator preventing fast flowing wastewater from disturbing the separation process inside the chamber. The separation of the light material (FOG) and the heavier material (sludge) from the wastewater is all accomplished by the force of gravity. Heavily emulsified greases and oils may not be completely separable with the gravity method.

What can enter the separator?

Only wastewater containing organic FOG, which are required to be separated from the water, should be allowed into the separator. Under no circumstances should sewage,

rainwater or wastewater containing mineral oils (hydrocarbon based) be allowed to enter the separator.

Examples of what should be connected to a separator: floor drains with odour traps, drainage channels, sinks, dishwashing machines and cooking vats.

Sludge separation chamber

The sludge separator serves to collect sludge / sediment which sinks to the bottom of the chamber due to its density being greater than that of the density of water.

Grease separation chamber

In the grease separation chamber, organic FOG (being less dense than water) separate from the wastewater and rise to the surface of the chamber. As more wastewater enters the chamber, the layer of separated greases and oils builds from the top down until the grease separation chamber is full and the entire chamber is emptied.

Installation notes

Requirements made on the installation location

Before a free-standing separator system can be installed, it must be checked that the planned set-up location is frost-free, has a horizontal, load-bearing floor, that there is sufficient space for set-up, operation, maintenance and control of the separator system and that the room is well vented and aerated. A water connection must be available for filling and cleaning the separator system as well as the respective electric installations required. When separator systems are to be installed underground it must be checked that there are no supply lines or cables within the area to be dug out. It must be remembered that accessibility for maintenance, inspection and disposal must be guaranteed at all times. Grease separator systems should be installed near where the wastewater is produced, but should not be in unventilated rooms or storage areas. To avoid odour pollution, they should not be located near occupied rooms and particularly near windows or ventilation openings. The systems must be easy for disposal vehicles to reach. Special operating conditions or limitations on site can make it necessary to locate the system further away from the points where the wastewater occurs.

Separator systems should be set up in such a way that frost damage is avoided and all the parts which require regular maintenance are easily accessible at all times. Wherever necessary, separator system covers must be installed in such a way that the extra load on the separator does not exceed its load capacity.

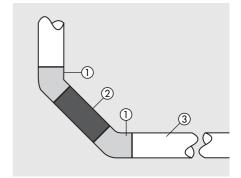

Connection to the drainage system

Unless any official requirements exist, grease separator systems must be connected to the sewer system as follows: the wastewater must be drained to the grease separator system via gravity. Grease separator systems installed below the backwater level (see EN 752-1) must be equipped with a twin pump lifting station. The supply pipes to the separator systems must have a gradient of at least 2 % (1:50) to prevent grease blockage. If this is not possible for constructional or operational reasons, and/or if longer pipes are necessary, suitable measures must be taken to prevent grease blockage and deposits.

Inlet piping

Wastewater entering a grease separator from the kitchen must do so in a calm manner in order to not agitate the sludge and grease layers inside the separator. Down pipes from the kitchen should be connected to the horizontal pipe with two 45 degree fittings (1) with at least 250 mm between the two fittings (2) (no 90 degree fittings should be used). No downward pipes should be connected to the main separator inlet pipe immediately prior to entering the separator. For a separator with a Ø 110 mm inlet, no downward connection should be made within 1 meter of the inlet to the grease separator - for a Ø 160 mm inlet a 1.5 meter distance should be observed (3) - for a Ø 200 mm inlet a 2.0 meter distance should be observed. In the case that the main inlet pipe is laid through cold rooms or underground, equipping this pipe with insulation or a heating system equipped with a thermostat should be considered.

Clever problem solversfor smooth disposal

Disposal pipe

The disposal pipe should be laid on a steady upward slope from the grease separator to the transfer point to the disposal vehicle, 90 degree elbows should be avoided. Disposal pipes should be executed as pressure or intake pipes in the necessary pressure level in accordance with the system features. Tight connections must be used for the individual pipes and fittings. Disposal pipes with a constant diameter should be laid to the transfer point. The intake pipe must have a nominal size of at least Ø 65 mm. Pipe material for the disposal pipe should be selected depending on the contents of the wastewater (extremely high solids share), special operating situation (overpressure/ underpressure) and resistance properties (fatty acids).

Shredder-Mix-System

During the separating process in a grease separator, fats oils and greases (FOG) are separated from the wastewater and form a continually growing layer which is retained between the inlet and outlet of the separator. If this layer solidifies, disposal can become a problem.

The KESSEL Shredder-Mix system uses its sturdy pump to mix the contents of the grease separator until grease and sludge are pumpable. Any solid materials such as bones, pieces of plastic, cords, peel etc. is chopped up by a macerating system.

During this process, the homogenised tank contents are injected back into the separator chamber with high kinetic energy. This removes deposits and any soiling clinging to the inside tank walls and cleans the grease separator from the inside.

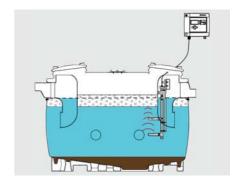

SonicControl

Sonic Control level sensing system with ultra sonic sensor for the measurement, display and monitoring of the grease layer thickness in a grease separator

- Disposal costs are saved by extending the disposal intervals.
- Environment protection
 Disposal of not full separators no longer necessary.
- User-friendly operation thanks to the interactive control unit with digital display and user friendly interface.

The right grease separator is just a few mouse clicks away

In order to simplify the selection process of EN 1825 grease separators, KESSEL now offers the SmartSelect grease separator specification program. This new free of charge on-line program offers the user multiple methods to accurately calculate the size of grease separator required for your specific project. Factors such as type of restaurant, meals served per day and wastewater temperature for example all play an important role when sizing a grease separator and are required when performing the calculation.

SmartSelect is based strictly on EN 1825 regulations and assures the user that the selected grease separator will meet all codes and norms. The resulting calculation sheet can be printed out to be filed with the project documentation or saved on-line in a KESSEL "virtual project library".

SELECTION CRITERIA FOR GREASE SEPARATORS

Version	G	D	D+S	D+SP	M+S	PV+S
Odour Reduced Disposal The direct disposal grease separator connection allows the disposal truck to vacuum out the grease separator contents without opening the separator covers.		✓	√	√	√	√
Odour Free Disposal The integrated Shredder-Mix-System intakes the entire separator contents, shreds it and then uses this homogenized mixture to rinse and clean the interior separator walls.			√	√	√	√
Control unit The Shredder-Mix-System, designed to homogenize the separator contents, can be started and controlled without needing direct access to the separator.				√	√	√
Disposal Pump In the case that the disposal truck is too high and/or too far from the grease separator to allow disposal via the truck's vacuum system, the separator can be equipped its own disposal pump system.					√	√
Fully Automated Operation All of the pre-programmed disposal steps of the separator's contents function fully automatically.						√

INFORMATION

Do you require more detailed information? Our Service Centre will be happy to help.

You can find your personal KESSEL contact on page 3 of this catalog!

Complete System Solution

In addition to individual grease- and oil separators, KESSEL also offers complete separator packages consisting of separator, properly matched lifting station and advantageous accessories. All from one source - KESSEL.

- Lifting and pumping stations for free standing and underground installation see chapter 3 "lifting stations".
- Stainless steel drains and channels for kitchens and food processing plants see chapter 4 "drains and channels made of stainless steel".

Individual Solutions

Thanks to the knowledge and possibilities in the field of polyethylene technology KESSEL is not only able to manufacture series products, but also special solutions in accordance with project-specific requirements.

SmartSelect simply makes planning easier - calculation tool for separators at smartselect.kessel.com

Grease separators made of polyethylene

The new KESSEL grease separators *EasyClean* bring ease of installation, cleaning performance and energy efficiency up to a new level.

EasyClean separators can be retrofitted up to the completely automatic system even while installed, and can thus be adapted to changing requirements.

NS 2, 3, 4, 7, 10

Grease separator *EasyClean* for free-standing set-up inside buildings

COMPLETE SYSTEM SOLUTION

In addition to individual grease separators, KESSEL also offers complete separator packages consisting of grease separator, properly matched lifting station and advantageous accessories.

OPTIMUM USE OF SPACE

Thanks to the refill inlet integrated in the separator. This makes installation directly at the wall possible.

IMPROVED CLEANING RESULTS

Wedge-shaped bottom for extraction at the lowest point (only 3 litres residual sludge volume). For nominal sizes NS 2 - NS 10.

NS 15 - NS 25

Grease separator **Euro Auto Mix & Pump (PV+S)** according to EN 1825

NS 1 - NS 35

Grease separator *Euro* according to EN 1825 and DIN 4040-100

SONIC CONTROL

for the measurement, display and control of the grease layer thickness in a grease separator.

STRAIGHTFORWARD MAINTENANCE AND INSPECTION

Sloped arrangement of the tank openings permits better access.

PLANNING MADE EASY!

Distinction between versions "in direction of flow right or left" is no longer necessary. Direction of flow can be changed on site by changing inlet and outlet.

IMPROVED PLACEMENT THANKS TO THE CURVED SHAPE

Also ideal for retrofitting and renovation work in rooms with very narrow access.

SHREDDER-MIX-SYSTEM

serves to comminute, mix and clean the tank content without odor emission during disposal.

KESSEL offers a factory extended warranty of 20 years on the polyethylene grease separator tanks.

Article description

☐ according to Euro Norm EN 1825, manufactured from virgin, non-recycled polyethylene, pumping capacity 3.0 kW

For free standing installation in frost protected areas, with integrated sludge trap, sloped interior base improves cleaning and reduces disposal time, inlet flow calming system and outlet flow regulation device, inlet and outlet interchangeable, slanted twin access covers with quick release odour tight snap closures, inspection window with interior cleaning arm, PV+S version fully automated odour free disposal, cleaning and refilling system at touch of button, maintenance free macerating motor (stainless steel blades) for separator cleaning and disposal, includes closure valve for easy motor removal, motor floor mount included with installation hardware and anti-vibration matt, actuator valve for automated transfer from cleaning to disposal mode, top mounted water jet(s) for grease layer breakup and water spray nozzles for interior wall cleaning during disposal, with LCD display control unit settable in English. German or French language and mains power safety on/off switch, with BMS connections, twin 1 inch solenoid valves for connection of cold and hot water pipes to separator, 1 inch interior threaded refill inlet with air gap, 75 mm OD PN 10 pressure disposal pipe with integrated fork lift grips at base of separator, low weight - compact design, 100 % corrosion free polyethylene body construction (20 year warranty).

Installation example EasyClean Auto Mix & Pump (PV+S)

- (1) Grease separator
- ② Shredder-Mix-System
- 3 Disposal line
- 4 Connection for disposal truck
- ⑤ Remote control system (optional)
- 6 Sampling chamber
- 7 Lifting station

EasyClean Auto Mix & Pump (PV+S) grease separators are designed according to EN 1825-1 and are equipped with a fully automated disposal, self cleaning and refill system. These separators distinguish themselves through their ease of installation and nearly maintenance free characteristics.

The advantage of the EasyClean Auto Mix & Pump (PV+S) separators is that a complete disposal can take place through permanently installed disposal lines while the twin covers of the separator remain closed. With this advantage, the disposal truck can hook up to a connection on an exterior wall of the building so that the pump of the separator can pump the separator contents into the waiting disposal truck without any unpleasant odours escaping. After the contents of the separator have been pumped out, the interior of the separator is automatically rinsed and cleaned with warm water in a multi-step automated process. The complete procedure occurs with the press of a button and is also available with a remote control system so that the driver of the disposal vehicle can handle the entire procedure without the necessity of any building personnel being present. According to DIN V 4040-2, the complete contents of the separator should be emptied, the unit cleaned and refilled with clean cold water every fourteen days or at a minimum of once every month.

Professional advantages

- Program-controlled disposal and rinsing device
- Shredder-Mix-System for homogenisation of the tank contents
- 3.0 kW pump
- Clean and odour-free disposal and cleaning
- Optional remote control
- Complete System Solution In addition to individual grease separators, KESSEL also offers complete separator packages consisting of grease separator, properly matched lifting station and advantageous accessories. All from one source - KESSEL.
- Individual Solutions

 KESSEL offers a fully staffed Individual

 Solutions Department with experience in
 designing and manufacturing drainage
 products exactly meeting your specifications.

You Tube

Installation hints

Important is that a sampling chamber is installed after the outlet of the separator. The separator is installed completely level on a flat firm surface in a frost free area. The height of the room in which the separator is installed should allow easy removal and access of the two lids. In the case that the outlet of the separator is located below the local defined backwater level, a lifting station is to be installed according to EN 12056. In situations where the interruption of separator service is not allowable, a lifting station with double pumps is to be installed.

Notice

EasyClean Auto Mix & Pump (PV+S) separators should be installed in all areas where nuisance odour problems are either undesired or not allowed. The systems allow the user to customize settings to improve disposal performance and also allow the disposal vehicle driver to handle the complete disposal procedure which can also be conducted during off hours.

In cases where the separator is installed in an operation producing large amounts of sludge (ie. slaughterhouses / butchers) it is recommended that the separator be equipped with twin pumps - one pump for the disposal of the sludge and the second pump for the disposal of wastewater and separated grease.

Installation example EasyClean Auto Mix (D+SP)

Professional advantages

Mayer Ager and Ager a

- 1 Grease separator
- ② Shredder-Mix-System
- 3 Control unit
- 4 Disposal line

- (5) Connection for disposal truck
- 6 Remote control system (optional)
- Sampling chamber
- 8 Lifting station

EasyClean Auto Mix (D+SP) grease separators are designed according to EN 1825-1 and are equipped with an automatically controlled pump for mixing and cleaning of the separators contents and inner walls. These separators are offered with a modern control unit with digital display. It is possible to automate specific steps of the grease separator disposal process. The EasyClean Auto Mix (D+SP) separators distinguish themselves through their ease of installation and nearly maintenance free characteristics.

The advantage of the EasyClean Auto Mix (D+SP) separators is that disposal can take place through permanently installed disposal lines while the twin covers of the separator remain closed. With this advantage, the disposal truck hooks up to a connection on an exterior wall of the building and, using its own pump, suctions out the entire contents of the separator without any unpleasant odours escaping.

The Shredder-Mix-System macerates and liquifies its contents and also cleans its interiror walls all simultaneously. This prepared wastewater is then suctioned into the waiting disposal vehicle. According to DIN V 4040-2, the complete contents of the separator should be emptied, the unit cleaned and refilled with clean cold water every fourteen days or at a minimum of once every month.

- Fully automatic direct disposal with program-controlled Shredder-Mix-System for homogenisation of the tank contents
- Clean and odour-free disposal and cleaning
- Simple control
- Low-maintenance operation

Installation example EasyClean Standard (D)

- (1) Grease separator
- 2 Disposal line
- 3 Connection for disposal truck
- 4 Sampling chamber
- (5) Lifting station

EasyClean Standard (D) grease separators are designed according to EN 1825-1. These separators distinguish themselves through their ease of installation and nearly maintenance free characteristics.

The advantage of the *EasyClean* Standard (*D*) separators is that disposal can take place through permanently installed disposal lines while the twin covers of the separator remain closed. With this advantage, the disposal truck hooks up to a connection on an exterior wall of the building and, using its own pump, suctions out the entire contents of the separator without any unpleasant odours escaping.

According to DIN V 4040-2, the complete contents of the separator should be emptied, the unit cleaned and refilled with clean cold water every fourteen days or at a minimum of once every month.

Professional advantages

- With direct disposal connection
- Disposal with the tank closed
- Low-maintenance operation
- Complete System Solution In addition to individual grease separators, KESSEL also offers complete separator packages consisting of grease separator, properly matched lifting station and advantageous accessories. All from one source - KESSEL.
- Individual Solutions
 KESSEL offers a fully staffed Individual
 Solutions Department with experience in designing and manufacturing drainage products exactly meeting your specifications.

Installation hints

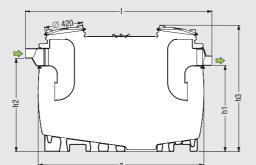

Important is that a sampling chamber is installed after the outlet of the separator. The separator is installed completely level on a flat firm surface in a frost free area. The height of the room in which the separator is installed should allow easy removal and access of the two lids.

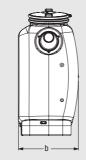

In the case that the outlet of the separator is located below the local defined backwater level, a lifting station is to be installed according to EN 12056. In situations where the interruption of separator service is not allowable, a lifting station with double pumps is to be installed.

Notice

The EasyClean Standard (D) separator should be inspected and fully cleaned during every third disposal. In all circumstances where the accessibility of the disposal truck's suction hose to the separator is highly limited or impossible, KESSEL recommends the installation of a EasyClean Standard (D) unit. With the installation of the refill equipment, the separator can be refilled after disposal without the need of opening any of the covers and releasing strong and aggressive odours.

Installation example *EasyClean* Basic (*G*)

Grease separator
 Suction hose

3 Sampling chamber

4 Lifting station

EasyClean Basic (G) grease separators are designed according to EN 1825-1. These separators distinguish themselves through their ease of installation and nearly maintenance free characteristics.

According to DIN V 4040-2, the complete contents of the separator should be emptied, the unit cleaned and refilled with clean cold water every fourteen days or at a minimum of every month. To empty the contents of the separator the odour tight covers need to be removed. The suction hose of the disposal truck is then used to empty and rinse the inside of the separator.

Installation hints

Important is that a sampling chamber is installed after the outlet of the separator. The separator is installed completely level on a flat firm surface in a frost free area. The height of the room in which the separator is installed should allow easy removal and access of the two lids. In the case that the outlet of the separator is located below the local defined backwater level, a lifting station is to be installed according to EN 12056. In situations where the interruption of separator service is not allowable, a lifting station with double pumps is to be installed.

Notice

The *EasyClean* Basic (*G*) separator can be upgraded to a any other version (with permanently installed disposal lines) at any time. It should only be installed in areas where:

- the release of strong and aggressive odours will not pose a problem
- accessing the separator with the disposal hose of the disposal truck will not cause problems or inconveniences.

Professional advantages

- Program-controlled disposal and rinsing device
- Shredder-Mix-System for homogenisation of the tank contents
- 3.0 kW pump
- Clean and odour-free disposal and cleaning
- On-site grease separator assembly With a team of KESSEL specialists, the grease separators can also be custom assembled on location. This allows larger grease separator to be used in existing buildings with limited access to the room in which the grease separator will be installed.

- Complete System Solution In addition to individual grease separators, KESSEL also offers complete separator packages consisting of grease separator, properly matched lifting station and advantageous accessories. All from one source - KESSEL.
- Individual Solutions

 KESSEL offers a fully staffed Individual

 Solutions Department with experience in
 designing and manufacturing drainage
 products exactly meeting your specifications.

SmartSelect simply makes planning easier – calculation tool for separators at smartselect.kessel.com

Installation example Euro Auto Mix & Pump (PV+S)

- (1) Distribution box
- ② Grease separator
- 3 Disposal line
- 4 Connection for disposal truck
- (5) Remote control system (optional)
- (6) Sampling chamber
- 7 Control unit
- 8 Lifting station

Euro Auto Mix & Pump (PV+S) grease separators are designed according to EN 1825-1 and are equipped with a fully automated disposal, self-cleaning and refill system. These separators distinguish themselves through their ease of installation and nearly maintenance free characteristics. The advantage of the Auto Mix & Pump separators is that a complete disposal can take place through permanently installed disposal lines while the covers of the separator remain closed. With this advantage, the disposal truck can hook up to a connection on an exterior wall of the building so that the pump of the separator can pump the separator contents into the waiting disposal truck without any unpleasant odors escaping. After the contents of the separator have been pumped out, the interior of the separator is automatically rinsed and cleaned with warm water in a multi-step automated process. The complete procedure occurs with the press of a button and is also available with a remote control system so that the driver of the disposal vehicle can handle the entire procedure without the necessity of any building personnel being present. According to DIN V 4040-2, the complete contents of the separator should be emptied, the unit cleaned and refilled with clean cold water every fourteen days or at a minimum of once every month.

Installation hints

Important is that a sampling chamber is installed after the outlet of the separator. The separator is installed completely level on a flat firm surface in a frost free area. The height of the room in which the separator is installed should allow easy removal and access of the two lids. In the case that the outlet of the separator is located below the local defined backwater level, a lifting station is to be installed according to EN 12056. In situations where the interruption of separator service is not allowable, a lifting station with double pumps is to be installed.

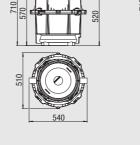

Notice

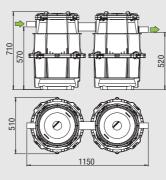

Euro Auto Mix & Pump (PV+S) separators should be installed in all areas where nuisance odor problems are either undesired or not allowed. The system allows the user to customize settings to improve disposal performance and also allow the disposal vehicle driver to handle the complete disposal procedure which can also be conducted during off hours. In cases where the separator is installed in an operation producing large amounts of sludge (ie. slaughterhouses / butchers) it is recommended that the separator be equipped with twin pumps - one pump for the disposal of the sludge and the second pump for the disposal of wastewater and separated grease.

Production and weather related influences can lead to deviations from our specifications in the case of free-standing separators. For this reason, please check the height specifications in particular for their actual size before installation. Please adapt the pipework to the actual inlet and outlet dimensions before installing the grease separator. Thermal and mechanical influences must be taken into consideration.

Delivery:

System completely assembled.

Accessories see page 281-282: Sampling chamber, extension section, direct disposal, SonicControl. Pumping stations see chapter 3 "lifting stations".

* Certification: Z-54.1-440 (NS 7 - 20) Change pending

Grease separator Euro G NS 7/10/15/20/25/30/35

☐ in accordance with EN 1825 and DIN 4040-100, made of polyethylene

For underground installation

Upper section made of polymer, height and level adjustment, with cover class A/B, D in accordance with EN 124, made of cast iron (can be driven over by cars and trucks), sealed odour-tight, incl. lift-out key.

 $\hfill \square$ for ground installation: frost-free depth

Minimum installation depth achieved by sawing the upper section as required

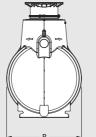

Installation is possible with groundwater up to the upper edge of the tank (UET).

A load distribution plate must be provided for class D.

Further nominal sizes on request

D = Installation depth \emptyset = Outer diameter

Light liquid separator made of polymer with DIBt approval

The renovation free alternative from plastic - with certification.

The KESSEL oil / fuel and coalescence separators are ideally suited for the everyday uses as well as protecting the environment. The certified structural testing, tank durability and complete watertightness (up to the top of the separator cover) are some of the

many advantages of using polyethylene separators.

The allowable limits are met with low volume sludge traps. Low disposal costs are the advantage. The German Institute for Building Technology (DIBt) has approved these separators for use.

Coalescence separator with DIRt approval

Oil-/Fuel separator with DIBt approval

INSTALLATION

The telescopic upper sections allow easy individual installation depths and adaptation to ground levels.

SAFF

Water-tight up to the top ground surface thanks to variable upper section with lip seal.

ODOR TIGHT

Odor tight covers available in classes A/B or D.

SAFETY

Float switch outlet lock prevents oil / fuel from the separator from overflowing out of the separator and into the sewer.

TRANSPORT

Low weight tanks as well as integrated fork lift grips allow for easy separator transport and installation

PRACTICAL

Automatic measuring devices *SonicControl* offers cm accurate monitoring and notification of oil / fuel or sludge layers as well as a flood / back-up warning.

KESSEL extends the warranty period for tanks beyond the statutory requirement to 20 years. This covers the water-tightness, usability and static safety of these components.

Oil-/Fuel separator, coalescence separator

Drinking water is one of our most precious resources. Our water is in danger wherever contaminants such as oil and petrol are used, such as at filling stations or during vehicle servicing and cleaning, or where lubricants are used. One single drop of petrol is enough to contaminate 1000 liters of water, which is why environmental damage must be prevented at an early stage. For this reason, soiled waste water is treated and cleaned before it is discharged into the sewage system. These tasks are taken over by light liquid separators.

Oil- / Fuel separators

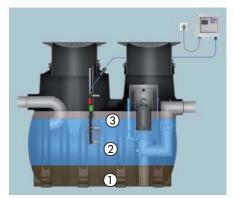

Oil/fuel separators are used to protect bodies of water and sewage systems from pollution through mineral oils. They work on the principle that the lower specific density of insoluble mineral oil products in wastewater makes them float upwards and collect at the surface. The outlet system with self-actuated closure prevents separated materials from flowing out.

Coalescence separators

Coalescence separators basically work on the same gravity principle as oil/fuel separators. To increase coalescence performance or improve draining values, there is an additional coalescence filter insert in the tank, unlike with oil/fuel separators. This insert is made of high-quality polymers and has two functions. Firstly, it has a positive influence on the flow within the separator, secondly it "filters" the entire wastewater through the coalescence material.

The principle of gravity in the separator

The separating process is handled in the separator by making use of the principle of gravity (weight and buoyancy). The separator is divided into three zones, the sludge trap ①, the separator chamber ② and the oil trap ③. The sludge trap at the bottom serves to retain sediments such as sand. The oil trap located at the top serves to retain light liquids up to a density of 0.95 g/cm3. In the zone between the sludge trap and the oil trap, the so-called separating chamber, the incoming wastewater is calmed to a major extent due to the increase in flow cross-section and in surface area. Under the influence of the above-mentioned forces the light liquid, water and sludge are separated.

Separator systems for volatile liquids such as oil and petrol

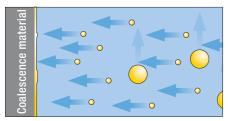

Basic construction, function and testing principles, marking and quality monitoring, choice of nominal size, installation, operation and maintenance

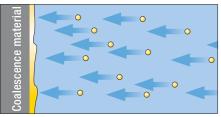

Preventing environmental damage

Increased efficiency using coalescence filter inserts

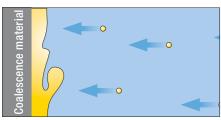

The efficiency of the oil/fuel separators can be increased by using coalescence filters. The finest droplets of oil can be separated out owing to the increased separator efficiency.

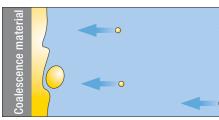

The oil droplets, which are not separated out owing to their different specific gravities with respect to the water, reach the oleophilic coalescence material and combine.

Owing to the coalescence effects, additional oil droplets can be retained. As a result of this, the oil film on the coalescence material continues to increase.

The increased size of the oil film increases the buoyancy. Individual large oil droplets split off.

The oil droplet floats to the surface and is separated out.

Outlet closure lock - self actuated

Oil/fuel separators and coalescence separators are equipped as standard with a self-actuated closure lock. This self-actuated closure lock prevents light liquid being released into the outlet, when the separator reaches its maximum oil/fuel storage volume. In the KESSEL light liquid separator this safety factor consists of a float inside a guide pipe which in normal operation is filled with water. The float is calibrated to float in water and sink in the light liquid (handles all substances with a specific gravity up to 0.95 g/cm³). If the maximum oil storage volume is achieved, the oil flows through lateral openings into the float guide pipe. The float then sinks and completely seals the outlet of the separator.

Automatic measuring device SonicControl

In compliance with the Euro standard EN 858-1, light liquid separators must be equipped with automatic warning devices. The ultrasonic measuring instrument *SonicControl* for light liquid separators is used for reliable and continual measurement of the oil layer, the sludge level and detection of backwater.

SonicControl for light liquid separators offers the following advantages:

Control through control unit

USB - connection for data memory read-out

Fast and easy installation

Suitable for all light liquid separators from KESSEL AG

Can be retrofitted to existing equipment

Readout software *SonicControl Viewer* available on request

Low disposal costs thanks to oil/sludge extraction feature

During standard disposal, the hose from the disposal vehicle is held into the light liquid separator and the entire contents are pumped out. However, the quantity of light liquid is significantly lower than the total volume of the separator. Here, the situation is remedied with the oil extraction device. The suction hose is coupled to the oil suction system for disposal of the light liquid. This means that the disposal vehicle can only dispose of the volume that corresponds to the maximum quantity of light liquid. This saves time during disposal, reduces disposal costs and goes easy on the built-in components in the separator.

In the same way, the sludge suction system can be used to significantly reduce the disposal quantity too.

both are removable

PE starch separators for the food industry

According to DIN 1986-100, starch separators are required wherever wastewater containing starch exists.

Starch often results from the preparation of potatoes, grains, rice and husked vegetables. It is non dissolvable in water and sinks due to particle size and weight resulting in build-up, encrusting and blockage in wastewater pipes.

Germany does not have a product norm for starch separators and they are not required to be tested.

Starch separators for underground	installation	Products
Illustration	Article description	Article #
	Starch separator For underground installation	System design and project planning to your specifications.

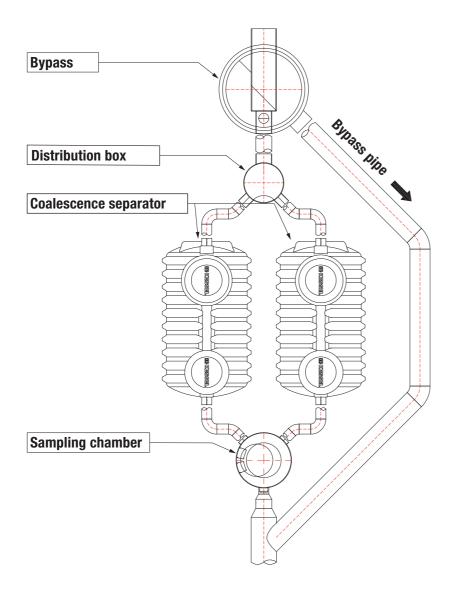

In compliance with DIN 1986-100, all companies that generate waste water containing starch require starch separators. Starch is created wherever potatoes, wheat or rice pulses are processed. Starch is insoluble in water and due to the particle size and density, it sinks to the bottom of the water, resulting in deposits, encrustation and blockages. There is no product standard in Germany for starch separators; also, they are not subject to mandatory testing.

Coalescence separator with bypass

EN 858-2 permits bypasses upstream from coalescence separators for cases where it is unlikely that significant contamination will result from light liquid in heavy rain. This means:

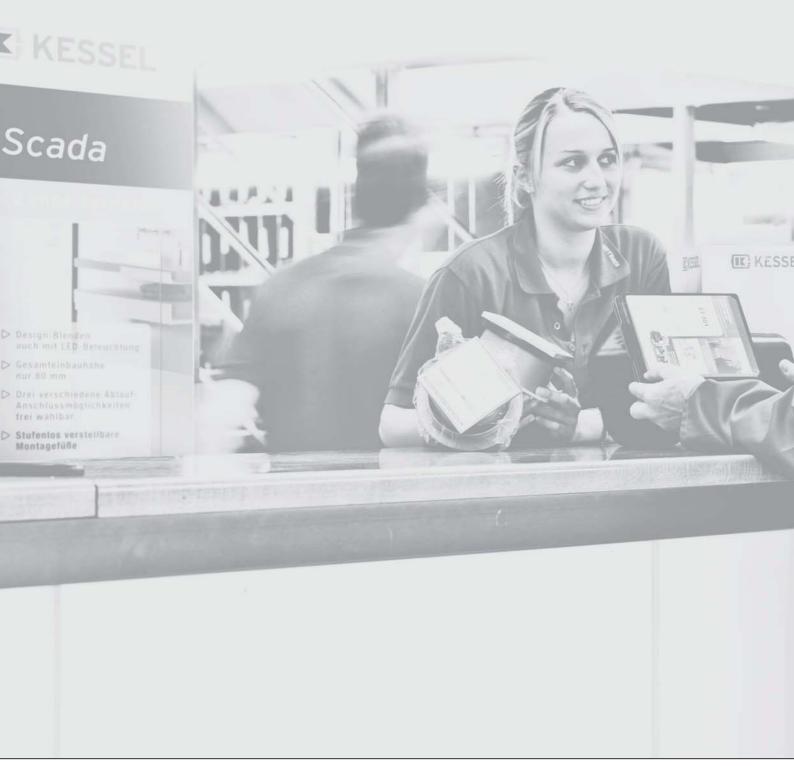

- \square for the treatment of oil contaminated run-off from car-parks, roads, parking lots or yards.
- □ not for treating contaminated water (industrial wastewater) from industrial processes.

Separators with bypass include a device which allows the liquid flow which exceeds the maximum permissible flow to be guided past the separator via a bypass.

General Terms of Sale

General

- 1. All deliveries, services, offers and other contractual performance shall be effected solely on the basis of these terms of business. Future terms of business shall govern the contractual relationship even if they are not expressly agreed. Terms of business or of purchase of the other party to a contract with KESSEL shall not apply, even if KESSEL does not expressly reject them. This shall also apply to all future business relationships.
- 2. All individual contractual agreements in writing shall take precedence, but these terms of business shall also apply insofar as they are not in contradiction to the individual contractual agreements.
- KESSEL retains the ownership of and copyright in cost estimates, drawings and other documents. All infringements whatsoever of these rights shall give rise to a liability for damages.
- 3. KESSEL expressly states that the information contained in the descriptions, documents and illustrations relating to characteristics of the subject matter of the contract are only authoritative in general terms and that they expressly do not represent any warranted characteristics whatsoever. Characteristics are warranted only if KESSEL states this expressly in writing.

Offer and entering into contract

- 1. Offers are prepared on the basis of the documents supplied to KESSEL and until the order is firmly placed they remain non-binding and subject to change without notice. The documents supplied are the basis of the offers made by KESSEL. No contract is entered into until KESSEL confirms the order in writing. The same applies to any supplementary agreements or agreements amending the contract.
- 2. Offers made by KESSEL may be treated as performance specifications only with KESSEL's consent. In this case, the costs incurred by KESSEL as a result of preparing the project shall be reimbursed in a reasonable amount if the order is placed elsewhere.
- 3. The other contracting party shall review drawings by KESSEL with regard to the possibility of execution of the order, including the technical aspects and the necessary installation measures. KESSEL shall be informed immediately of any discrepancies, failing which KESSEL cannot and shall not take responsibility for any manufacturing defects. KESSEL does not accept cancellations of orders after the contract is entered into.

Passing of risk

- 1. The risks attached to the subject of contract shall pass to the buyer at the time when it is shipped. If the shipping is delayed or impossible and KESSEL is not at fault, the risk shall pass to the buyer at the time when it is notified that the products are ready for collection. This shall always apply if collection by the other party to the contract is agreed. If the delay results from the breach of a duty of cooperation of the buyer (for example, failure to collect in good time, refusal to take delivery), KESSEL is entitled, after granting additional time without results, to store the subject of contract at the costs of the buyer. Acceptance is then deemed to have been effected. KESSEL may also take the necessary measures and make the delivery, or withdraw from the part of the contract that has not yet been performed, or demand damages, at its own discretion. This does not affect KESSEL's further rights.
- 2. If the buyer definitively fails to take delivery of the subject of contract it ordered, KESSEL shall be entitled to damages in the amount of 25% of the contract price; in this case, the buyer reserves the right to show that less damage occurred, and KESSEL may present evidence of greater damage.

Price and payment

- 1. Prices shall be ex works and do not include incidental costs such as statutory value-added tax, packaging, customs, insurance etc. The prices are net prices without any deduction.
- 2. Payment for each delivery or service shall be made in accordance with the agreed conditions; failing this, payment shall be made immediately in cash without deduction, after notification that the consignment is ready for dispatch. Cash discounts or other deductions will not be granted. The payment shall not be deemed to have been made until KESSEL has unrestricted disposal of the amount. Payments shall be made free of charge for KESSEL.
- 3. KESSEL shall be entitled, notwithstanding provisions of the buyer to the contrary, to set payments off first against the buyer's older debts. If costs and interest have already become payable, KESSEL shall be entitled to set off the payment first against the costs, then against the interest, and then against the principal chains.
- 4. In the case of default in payment, enterprises, legal persons under public law or special funds under public law will be required to pay default interest in the amount of 8% above the base rate. Other persons will be required to pay the statutory interest rate of 5% above the base rate.
- KESSEL reserves the right to provide evidence of and demand higher damages.
- 5. KESSEL shall be entitled to require advance payments or suitable security of up to 100% of the order value. As a general rule, this right is not subject to any conditions whatsoever. If the buyer does not comply with such requests within a stipulated period of time, KESSEL shall be entitled to withdraw from the contract in whole or in part.
- 6. The buyer is only entitled to use set-off against KESSEL's payment claims or to exercise a right of retention or price reduction, even if it asserts defects or counterclaims, if the counterclaims have been finally and non-appealably established or are undisputed.
- 7. KESSEL reserves the right, in the case of default in payment, to assert further loss incurred as a result of the default, even if this exceeds the loss of interest receipts referred to under 4. above.
- 8. If, in the execution of the contact, return shipments are made, these must be agreed with KESSEL in advance. Return shipments for which KESSEL is not responsible must be sent carriage paid. In the case of a return shipment, KESSEL shall be entitled to charge 25% of the value of the goods, but at minimum EUR 15.00 as a processing fee. The buyer shall have the right to show that the cost of processing was less, and KESSEL shall have the right to show that the cost of processing was higher.

Delivery time

- Delivery periods shall commence when the contract is entered into, but not before the documents and releases to be supplied by the buyer are provided.
- 2. The delivery period shall be deemed to have been complied with if the subject of contract has left KESSEL's premises or the buyer has been informed that the subject of contract is ready for dispatch before the delivery period ends. If the buyer exceeds the deadline for collection, KESSEL shall be entitled, after the period ends without results, to impose a final deadline of two weeks, to withdraw from the contract in whole or in part, or to require damages for breach of duty, for delay of performance or instead of performance. The delivery period stated in the confirmation of order is subject to the condition that the buyer has performed its obligations under the contract. If the buyer makes repeat orders or requests changes, the delivery period will be correspondingly extended.
- 3. In the event of force majeure, such as insurrection, strike or lockout, or the occurrence of other unforeseeable obstructions that are outside KESSEL's sphere of influence, for example stoppages or other events caused by a supplier, the delivery period shall be extended appropriately. This shall also apply if the obstructions occur in the course of an existing delay. If the obstruction lasts longer than three months, the buyer is entitled, after setting a reasonable final deadline, to withdraw from the contract with regard to the part not yet performed.
- 4. If KESSEL is responsible for non-observance of bindingly agreed periods and dates or is in default, the buyer shall be entitled to compensation for damage resulting from default in the amount of 0.5% for every complete week of default, but up to a maximum total of 5% of the net invoice price of the deliveries and/or services to which the contract relates. Claims exceeding this are excluded, unless the default results at least from gross negligence. KESSEL shall at all times be entitled to part deliveries and part performance.
- 5. KESSEL gives no guarantee with regard to procurement.

Retention of title

- 1. KESSEL retains title of the subject of contract until all claims are satisfied, including all claims for payment of current account balance, which KESSEL may assert on whatsoever legal basis against the buyer at present or in future, including the obligation to cash cheques received by KESSEL. If the value of the securities existing for KESSEL exceeds the claims against the buyer by more than
- If the value of the securities existing for KESSEL exceeds the claims against the buyer by more than 20%, KESSEL shall at its own discretion release securities at the request of the buyer.
- 2. During the period of retention of title, the buyer shall neither pledge the subject of contract nor transfer its ownership as security. This applies in particular to the transfer of title to warehouse contents by way of security. The buyer shall use its best efforts to ensure that the secured parties in question are adequately informed of this.
- 3. As long as the retention of title continues, a sale or other disposal of the subject of contract shall require KESSEL's prior consent in writing. In the event of contravention, the rights against third parties that have accrued to the buyer shall be deemed to have been assigned to KESSEL with effect from the time when the contract was entered into. The assignment shall apply in the same way in the case where the goods subject to retention of title are altered or processed by the buyer or if they are sold to more than one person.
- 4. In the case of conduct in breach of contract by the buyer, in particular in the case of default in payment or if court insolvency proceedings are commenced or applied for with regard to the buyer's assets, KESSEL shall be entitled to take the subject of contract back and the buyer shall be obliged to return it, excluding any right of retention. In this connection, KESSEL shall have a separate right of termination. The buyer shall then bear the costs arising from the taking back. KESSEL is entitled, without prejudice to the buyer's payment obligation, to sell the subject of contract taken back at the best price by sale by private agreement. After deduction of the costs of KESSEL, the proceeds of sale shall be set off against the debt still outstanding.
- 5. However, if KESSEL asserts its retention of title, this shall not be deemed a withdrawal from the contract. Withdrawal from the contract shall be declared separately by KESSEL if it is to be effected.
- 6. If the subject of contract is delivered abroad, the above clause shall apply to the extent that this is permissible under the law in whose jurisdiction the delivered item is situated. If the law prescribes a particular form for reservation of title, or even a registration, the buyer shall make the declarations that are necessary to comply with the formal requirements and for registration. If the foreign law permits reservation of property, it shall be deemed to have been agreed on.

Warranty

- 1. If a delivery or service is defective, KESSEL shall, at its own discretion, remove the defect by subsequent improvement or deliver a product that is free of defects. If the subsequent improvement fails twice or if it is not financially justifiable, the buyer shall have the right to withdraw from the contract or to correspondingly reduce its obligation to pay. In the case of obvious defects, the buyer must notify these without delay in writing; in the case of defects that are concealed or not discernible, it must notify them without delay after they become discernible. KESSEL shall be liable for subsequent improvements and subsequent deliveries in the same extent as for the original subject of contract. For replacement deliveries, the warranty period begins to run anew, but only to the extent of the new delivery.
- A warranty is given only for newly manufactured products.
- The warranty period is twenty-four months from the date of delivery to the other party to the contract. Sections 377 and 378 of the German Commercial Code (Handelsgesetzbuch) shall continue to apply.
- KESSEL AG gives a twenty-year warranty that is more extensive than the statutory warranty for light liquid separators, grease separators, inspection chambers, septic systems and rainwater cisterns. This relates to impermeability, fitness for use and structural stability.
- This is subject to the requirement that the products are professionally installed and are operated in accordance with their intended use, in compliance with the current installation and operation instructions and the applicable statutory provisions.
- 2. KESSEL expressly states that wear and tear is not a defect. The same applies to defects that result from defective servicing.

Limitation of liability

- KESSEL's liability shall be limited to damage that is caused by KESSEL or one of its agents for whom it is vicariously liable intentionally or with gross negligence. This does not apply to injury to the life, body or health of the buyer.
- In other respects, KESSEL's liability is excluded insofar as this is permitted by law.

Place of performance and place of jurisdiction

- 1. The place of performance is Lenting. All legal relations between KESSEL and the buyer are governed solely by the law of the Federal Republic of Germany.
- For entrepreneurs, legal persons under public law or special funds under public law, the exclusive place of jurisdiction for all litigation arising directly or indirectly from the contractual relationship, including summary actions to enforce bills of exchange and rebenues is inpushed.
- summary actions to enforce bills of exchange and cheques, is Ingolstadt.

 This agreement on jurisdiction also applies to the case where the buyer has no general place of jurisdiction within Germany or after the contract is entered into moves its domicile, seat or habitual abode outside Germany, or where its domicile, seat or habitual abode is unknown at the time when the action is brought. However, KESSEL shall also be entitled to take legal action against the buyer in any other place of jurisdiction that is applicable to the buyer.

Assignment of rights and duties

Assignments of rights and duties under contracts between the buyer and KESSEL shall be valid only with the prior consent of KESSEL in writing. Potential claims of KESSEL may therefore be assigned to third parties only with KESSEL's prior consent in writing.

Provisions on the purchase of consumer goods

KESSEL will recognize recognizes a right of recourse for enterprises pursuant to Section 478 of the German Civil Code where a defect does in fact exist for which KESSEL is responsible and provided that our warranty period has not ended. The other party to the contract must contribute to ensuring that KESSEL is informed in full without delay of

possible recourse to KESSEL. At its own discretion, KESSEL shall be entitled, disregarding intermediaries, to settle claims of the consumer or entrepreneur for its own account, whether by subsequent performance, reduction of purchase price or subsequent improvement. Parties to a contract with KESSEL shall submit to or procure for KESSEL without delay all necessary documentation in order that claims of consumers or dealers may be settled as promptly as possible. This does not imply any acknowledgement of a claim on the part of KESSEL.

Invalidity of a condition

If a provision in these terms or a provision in connection with other agreements should be or become invalid, this shall not affect the validity of the other provisions or of individual agreements. In this case, either party to the contract may require a valid provision to be agreed, insofar as this approaches as closely as possible the business and legal purpose of the invalid provision.
